List of Contributors	xi
-----------------------------	----

General Preface	xiii
------------------------	------

Preface to Volume 1	xv
----------------------------	----

1 The General Cell

ELDON H. NEWCOMB

I. Introduction	2
II. The Plasma Membrane	5
III. Microtubules	7
IV. Plasmodesmata	8
V. Cell Vacuoles	11
VI. The Nucleus	13
VII. The Cell Wall	13
VIII. The Endomembrane System	21
IX. Polyribosomes and Protein Synthesis	28
X. Microbodies	31
XI. Mitochondria	34
XII. Plastids	38
XIII. The Cytoplasmic Ground Substance	45
References	50

2 Use of Plant Cell Cultures in Biochemistry

PAUL LUDDEN AND PETER S. CARLSON

I. Introduction	55
II. Choice of Experimental Organism	57

III. Regulation of Development and Metabolism	62
IV. Autotrophy by Plant Cells in Culture	72
V. Uptake and Transport Studies	74
VI. Isolation and Characterization of Organelles from Plant Cells in Culture	79
VII. Plant Cells and Protoplasts as Genetic Systems	82
VIII. Concluding Remarks	86
References	88

3 The Primary Cell Walls of Flowering Plants

ALAN DARVILL, MICHAEL McNEIL, PETER
ALBERSHEIM, AND DEBORAH P. DELMER

I. Introduction	92
II. The Sugar Nomenclature and Abbreviations Used	96
III. Methods Used in the Structural Analysis of Cell Wall Polysaccharides	98
IV. The Pectic Polysaccharides	101
V. The Hemicelluloses	116
VI. Noncellulosic Glucan	128
VII. Cellulose	131
VIII. Cell Wall Protein	132
IX. Interconnections between the Primary Cell Wall Polymers	137
X. Are the Primary Cell Walls of Different Plants Structurally Related?	143
XI. Biosynthesis of Primary Cell Wall Polymers	147
XII. The Future of Primary Cell Wall Research	155
References	157

4 The Plasma Membrane

ROBERT T. LEONARD AND THOMAS K. HODGES

I. Introduction	163
II. Morphology as Distinguished with the Electron Microscope	164
III. Purification of the Plasma Membrane	169
IV. Chemical Composition of the Plasma Membrane	174
V. Enzymatic Composition of the Plasma Membrane	175
VI. Functions	178
VII. Conclusions	181
References	181

5 The Cytosol

GRAHAME J. KELLY AND ERWIN LATZKO

I. Introduction	183
II. Definition and Structure	184
III. Carbon Metabolism	185
IV. Nitrogen Metabolism	201
V. Phosphate Metabolism	204
VI. Concluding Remarks	205
References	205

6 Development, Inheritance, and Evolution of Plastids and Mitochondria

JEROME A. SCHIFF

I. Introduction	209
II. Organelle Development and Inheritance	210
III. Origin of the Biochemical Building Blocks for Organelle Development	250
IV. Origin of the Genetic Information for Organelle Development	252
V. Coordination of Organelle Development through Induction by Light and Other Substrates	257
VI. Origin of Present Interrelationships among Organelles during Evolution	261
References	265

7 Biochemistry of the Chloroplast

RICHARD G. JENSEN

I. Introduction	274
II. Morphology of Higher Plant Chloroplasts	274
III. Fundamental Energy Processes in Photosynthesis	276
IV. Carbon Metabolism in the Chloroplast	288
V. Energetics and Shuttle Mechanisms of the Chloroplast	297
VI. Storage of Energy by Starch Accumulation	303
VII. Assimilation of Nitrogen	305
VIII. Sulfate Reduction	306
IX. Metabolism of Lipids	307
X. Protein Synthesis in the Chloroplast	310
References	312

8 Plant Mitochondria

J. B. HANSON AND D. A. DAY

I. Introduction	315
II. Occurrence, Form, and Development	316
III. Structure and Composition	318
IV. Enzymes and Enzymatic Activities	323
V. Cellular and Physiological Interactions	347
References	352

9 Microbodies—Peroxisomes and Glyoxysomes

N. E. TOLBERT

I. Introduction	359
II. Morphological Detection and Description	363
III. Isolation Procedures	365
IV. Enzymes in Microbodies—Catalase	367
V. Metabolic Pathways in Leaf Peroxisomes	369
VI. Metabolic Pathways in Glyoxysomes	373
VII. Other Enzymes in Microbodies	376
VIII. Microbody Membranes and Transport	378
IX. Distribution of Microbodies in Plant Tissues	380
X. Development and Biogenesis of Peroxisomes and Glyoxysomes	383
XI. Function	386
References	387

10 The Endoplasmic Reticulum

MAARTEN J. CHRISPEELS

I. Structure, Isolation, and Composition of the ER	390
II. Biogenesis and Degradation	396
III. Role of the ER in the Biogenesis of Cytoplasmic Organelles	400
IV. Role of the ER in the Biosynthesis and Secretion of Extracellular Molecules	405
V. Other Biosynthetic and Regulatory Functions of the ER	408
VI. Conclusion	410
References	410

11 Ribosomes

ERIC DAVIES AND BRIAN A. LARKINS

I. Introduction	413
II. Ribosome Structure and Biogenesis	414

III. Polyribosomes	424
References	433

12 The Golgi Apparatus

HILTON H. MOLLENHAUER AND D. JAMES MORRÉ

I. Introduction	438
II. Definition	438
III. Association with Other Cell Components: The Endomembrane Concept	442
IV. Biochemistry of Plant Golgi Apparatus	450
V. Cytochemistry of Plant Golgi Apparatus	455
VI. Role in Secretion	457
VII. Role in Membrane Differentiation	468
VIII. Role in Membrane Flow	472
IX. Physiology of the Plant Golgi Apparatus	474
X. Golgi Apparatus Multiplication	480
XI. Concluding Comments	481
References	483

13 The Plant Nucleus

E. G. JORDAN, J. N. TIMMIS, AND A. J. TREWAVAS

I. Introduction	490
II. The Nucleus at Interphase	491
III. Structure and Functional Aspects of Interphase Chromatin	505
IV. Dynamic Aspects of Chromosomes during Division and Meiosis	528
V. Dynamic Aspects of Chromosomes in Differentiation	536
VI. The Nucleolus	543
VII. The Nuclear Envelope and Nuclear Pore Complexes	568
References	579

14 Protein Bodies

JOHN N. A. LOTT

I. Introduction	589
II. Protein Body Structure	590
III. Protein Body Composition	601
IV. Changes in Protein Bodies during Germination and Early Seedling Growth	610
V. Development of Seed Protein Bodies	611

VI.	Problems Encountered in Studies of Protein Bodies	617
VII.	Future Research	619
	References	620
15	Plant Vacuoles	
	FRANCIS MARTY, DANIEL BRANTON, AND ROGER A. LEIGH	
I.	Introduction	625
II.	The Lysosome Concept	626
III.	Vacuole Development	629
IV.	Vacuole Function	640
V.	Appendix: Methods for Isolating Vacuoles and Tonoplasts	649
VI.	Conclusions	653
	References	655
16	Cyanobacteria (Blue-Green Algae)	
	C. PETER WOLK	
I.	Introduction	660
II.	Cytological Chemistry	660
III.	Metabolism	665
IV.	Genetics	672
V.	Viruses	673
VI.	Movement	673
VII.	Culture	674
VIII.	Regulation	675
IX.	Development	676
X.	Evolution	679
	References	681
	Index	687
	Contents of Other Volumes	700
