

Contents

Preface	v
1 Introduction	1
2 Mitochondria	7
Introduction	7
The structure and properties of mitochondria	8
Principal phenotypic effects of mitochondrial genes	19
Recombination and mapping of mitochondrial genes	24
The dual genetic control of mitochondria	31
Kinetoplasts	38
Conclusion	41
3 Chloroplasts	43
Introduction	43
Structure and macromolecular components	43
Genetics of chloroplasts	50
The dual genetic control of chloroplasts	58
Conclusion	62
4 Plasmids	64
Introduction	64
Brief description of F, R and Col plasmids	65
Plasmid DNA and its replication	68
Transfer of plasmids from one bacterium to another	71
Recombination and mapping	72
Artificial plasmids and their use in genetic engineering	74
Conclusion	77
5 Endosymbionts and Viruses as Agents of Extranuclear Heredity	79
Introduction	79
Endosymbionts of <i>Paramecium</i> and other protozoa	80

Incompatibility in mosquitoes	87
Sex ratio in <i>Drosophila</i>	89
Sigma virus and carbon dioxide sensitivity in <i>Drosophila melanogaster</i>	91
Double-stranded RNA and killer strains of <i>Saccharomyces</i> and <i>Ustilago</i>	97
Conclusion	101
6 Miscellaneous Examples of Extranuclear Inheritance	103
Introduction	103
Fungi	103
Cytoplasmic male sterility in plants	108
Nucleo-cytoplasmic interaction in protozoa	113
7 Conclusion: Extranuclear Genetics and the Evolution of Cell Organelles	116
References	122
Index	139
