PREFACE xi

ACKNOWLEDGMENTS xiii

PART I INTRODUCTION 1

CHAPTER 1 The Problem 3

PART II MICROEVOLUTION 11

CHAPTER 2 The Breeding Population 13

3 The Statics of Populations 23

4 The Dynamics of Populations 28

5 Mutation 36

6 Gene Flow 45

7 Recombination 54

PART III NATURAL SELECTION 61

CHAPTER 8 Basic Theory of Selection 63

9 Gene Expression in Relation to Selection 70

10 Examples of Selection 77

11 Modes of Selection 94

12 Effects of Individual Interactions 112

13 Genetic Drift 117

14 Cost of Selection 131

PART IV THE PROBLEM OF ACQUIRED CHARACTERS 139

CHAPTER 15 Phenotypic Modifications 141

16 Transduction and Induction 146

17 The Evolutionary Role of Induction 151

PART V	SPECIATION	155
CHAPTER 18	Races and Species	157
19	Isolating Mechanisms	177
20	Ecological Differentiation	186
21	Geographical Speciation	196
22	Modes of Speciation	207
23	General Theory of Speciation	218
24	Selection for Isolation	222
PART VI	MACROEVOLUTION	229
CHAPTER 25	Geological Time	231
26	Evolutionary Trends	243
27	Specialization	262
28	Evolutionary Rates	265
29	Molecular Changes	275
30	Population Structure in Relation to Macroevolution	289
31	Evolution of Major Groups	303
32	Extinction	315
PART VII	FROM ORGANIC EVOLUTION TO HUMAN EVOLUTION	329
CHAPTER 33	Progressive Evolution	331
34	Hominid Phylogeny	336
35	Primate Social Evolution	346
36	Cultural Evolution	353
37	Determinants of Human Evolution	358
PART VIII	SOCIAL IMPLICATIONS	367
CHAPTER 38	The Evolution Controversy	369
39	Relevance of Evolutionary Biology	376
	KEY TO TECHNICAL TERMS	379
	BIBLIOGRAPHY	383
	INDEX TO AUTHORS	403
	INDEX TO ORGANISMS	409
	INDEX TO SUBJECTS	415
