<i>List of abbreviations</i>	
<i>Chapter 1. What is gel filtration chromatography?</i>	<i>1</i>
1.1. Gel filtration chromatography – a biochemical separation method	1
1.2. The mechanism of gel filtration chromatography	2
1.3. Characteristic properties of gel filtration chromatography	6
<i>Chapter 2. Basic concepts</i>	<i>7</i>
2.1. Some definitions	7
2.2. Variables used to characterize the bed	9
2.3. Variables used to characterize the flow	11
2.4. Variables used to characterize solute behaviour	12
2.5. Graphic representation of the relationship between molecular parameters of solutes and elution properties	16
2.6. Universal calibration	19
2.7. Solute-matrix interaction	19
2.8. Variables used for the characterization of gels	22
<i>Chapter 3. Gels for chromatography</i>	<i>24</i>
3.1. Definition of the term gel	24
3.2. Important properties of gels for chromatography	25
3.3. Synthesis of gels for gel filtration chromatography	28
3.4. Dextran gels, Sephadex®	29
3.5. Chromatographic properties of Sephadex	31
3.6. Sephacryl®	36
3.7. Chromatographic properties of Sephacryl®	38

3.8. Polyacrylamide gels, Bio-Gel®	40
3.9. Chromatographic properties of Bio-Gel	44
3.10. Agar and agarose gels	44
3.11. Chromatographic properties of agarose gels	52
3.12. Macro-microreticular gels	54
3.13. Other types of gels for use in aqueous solutions	56
3.14. Gels for use in organic solvents	56

Chapter 4. Equipment for gel filtration chromatography in columns 62

4.1. General	62
4.2. The chromatographic column	63
4.3. Equipment for regulation of the flow	67
4.3.1. Mariotte flask	67
4.3.2. Pumps	69
4.4. Recording of elution curves	72
4.4.1. General	72
4.4.2. Automatic analysis	72
4.4.3. Monitors	72
4.4.3.1. General considerations	72
4.4.3.2. Photometric monitors	73
4.4.3.3. Other types of monitors	75
4.4.3.4. Scanning of column	76
4.5. Fraction collectors	77
4.6. Thermostats	78
4.7. Connecting tubing	78

Chapter 5. Experimental technique in column gel filtration chromatography 81

5.1. Choice of gel type	81
5.2. Particle size and particle size distribution	88
5.3. Choice of eluant	91
5.4. Preparation of the gels	92
5.5. Prevention of microbial growth: antimicrobial agents	94
5.6. Drying of gels	101
5.7. Avoiding contamination, rinsing contaminated gels	101
5.8. The column dimensions, the sample size and the flow rate	103
5.8.1. The influence of column length	103
5.8.2. The volume of the sample	104

5.8.3. The column diameter	105
5.8.4. The bed volume	106
5.9. Packing of the column	106
5.10. Regulation of the flow rate	113
5.11. Checking the column packing	122
5.12. Influence of sample composition	124
5.13. Sample application	126
5.14. Preparation of the bed for a new experiment	128
5.15. Increase of effective column length	129
5.15.1. Connecting columns in series	129
5.15.2. Recycling chromatography	129
5.16. Upward flow chromatography	130

Chapter 6. Some applications of gel filtration chromatography . 137

6.1. General	137
6.2. Analytical applications	137
6.2.1. Analytical group separation	137
6.2.2. Analytical fractionation	142
6.2.3. Measurement of protein binding and complex formation	148
6.2.4. Equilibrium determination by solute-matrix interaction	158
6.2.5. Determination of molecular masses	159
6.2.6. Determination of molecular mass distributions	164
6.3. Preparative applications	169
6.3.1. Preparative group separation	169
6.3.2. Preparative fractionation	176

Chapter 7. Thin-layer gel filtration chromatography 191

7.1. General	191
7.2. Differences between ordinary thin-layer chromatography and thin-layer gel filtration chromatography	192
7.3. Equipment for thin-layer gel filtration chromatography	193
7.4. Preparation of the plate	195
7.5. Set-up of apparatus and chromatographic run	197
7.6. Detection of the substances	199
7.7. Two-dimensional thin-layer techniques	200
7.8. Applications of thin-layer gel filtration chromatography	201

<i>Chapter 8. Special techniques</i>	205
8.1. Basket centrifuge separation	205
8.2. Chromatography with mixed solvents	208
8.3. Isoelectric focusing on gel filtration chromatographic materials	209
8.4. Zone precipitation	209
8.5. Zone electrophoresis	212
8.6. Concentration	212
8.7. Salt gradient elution	214
8.8. Osmometry with a single bead	214
8.9. Molecular mass determination by UV spectrophotometry on a single bead	215
<i>Chapter 9. Some notes on the mechanism of gel filtration chromatography</i>	216
Acknowledgment	231
<i>Appendix 1. Manufactures and suppliers of materials required in gel filtration chromatography</i>	232
<i>Appendix 2. Analytical procedures to be applied to effluents from gel filtration chromatographic columns</i>	238
<i>Appendix 3. Staining of thin-layer gel filtration chromatograms</i>	247
References	251
Subject index	265

Chapter 5. Experimental technique in column gel filtration chromatography

5.1. Choice of gel type	18
5.2. Particle size and size distribution	21
5.3. Distance between column thin-layer chromatography and thin-layer gel filtration chromatography	24
5.4. Preparation of the column	26
5.5. Preparation of the sample	27
5.6. Drying of the plate	28
5.7. Set up of apparatus and development	29
5.8. Detection of the products	30
5.9. Two-dimensional thin-layer chromatography	31
5.10. Application of thin-layer gel filtration chromatography	32
