I From Genome to Embryo: The Regulation of Gene Activity in Early Development

1. Introductory Comments 2
2. Synopsis of Major Themes 3
3. Historical Antecedents: A Very Brief Summary of the Origins of the Variable Gene Activity Theory of Cell Differentiation 8
4. Is There Structural and Functional Change in the Genome during Development? 12
 - (i) Ontogeny and the Structure of Specific Genes 12
 - (ii) Activation of Silent Genes in Differentiated Adult Cells 16
 - (iii) Developmental Capacities of Nuclei Transplanted into Eggs 17
5. Gene Regulation in Development 25
 - (i) Developmental Activation of Genes by Interaction with *Trans*-Regulators 25
 - (ii) Regulation of Gene Activity during Embryogenesis 32

II The Nature and Function of Maternal Transcripts

1. The Discovery of Maternal mRNA: Early Biological and Biochemical Evidence 46
2. Complexity of Maternal RNA 50
3. Maternal Transcripts Containing Interspersed Repetitive Sequences 55
 - (i) Initial Evidence for Heterogeneous Repetitive Sequence Transcripts in the Egg 55
 - (ii) Molecular Structure of Interspersed Poly(A) RNAs in the Sea Urchin Egg 59
 - (iii) Interspersed Maternal Poly(A) RNA in *Xenopus* Eggs 65
 - (iv) Interpretations of Interspersed Maternal Poly(A) RNA 67
4. Utilization of Maternal mRNA in Development 69
 - (i) Maternal mRNA and Protein Synthesis in the Early Sea Urchin Embryo 69
 - (ii) Maternal mRNA in Amphibian Eggs 90
 - (iii) Maternal mRNA in Mammalian Embryos 100

vii

- (iv) Maternal Genetic Information in the Development of *Drosophila* and *Smittia* (Diptera) 107
- (v) Maternal mRNA in Other Organisms: Some Comparative Strategies 115

III Transcription in the Embryo and Transfer of Control to the Zygotic Genomes

1. General Qualitative Aspects of Nuclear RNA and Messenger RNA Synthesis in Embryos of Various Species 126
 - (i) Zygotic Transcription in Sea Urchin Embryos 126
 - (ii) Transcriptional Activation in *Xenopus* Embryos 131
 - (iii) Timing of Zygotic Transcription in *Drosophila* and Other Insects 135
 - (iv) Onset of Heterogeneous RNA Synthesis in Early Embryos of Other Species 137
2. Rates of Transcription in Embryonic Genomes and Accumulation Kinetics for nRNA, mRNA, and rRNA 140
 - (i) The Number of Active Transcription Units and Their Level of Expression 140
 - (ii) Zygotic mRNA Synthesis 150
 - (iii) Replacement of Maternal by Zygotic Transcripts 155
 - (iv) Synthesis of rRNA 160
3. Zygotic and Maternal Gene Sets 163
 - (i) Composition of the Zygotic Gene Set in Sea Urchin Embryos 165
 - (ii) Zygotic Gene Sets in Vertebrate Embryos 170
 - (iii) Comparative Aspects 172
4. Zygotic Gene Activation: Embryonic Expression of Histone Genes and of Some Other Physiologically Responsive Genes 173
 - (i) "Early" and "Late" Histone Genes in the Sea Urchin Embryo 174
 - (ii) Growth Related Genes and Physiologically Induced Genes in Embryonic Systems 186

IV Differential Gene Function in the Embryo

1. Timing of Differential Gene Expression and General Aspects of Gene Regulation in the Embryo 194
 - (i) Developmental Aspects 194
 - (ii) Assumptions Regarding Differential Gene Activation in the Embryo from Observations on Warm-Blooded Vertebrates 196
2. Cell Lineage and Differential Gene Expression in the Embryo of *Caenorhabditis elegans* 198
 - (i) Cell Lineage and Pathways of Differentiation in *C. elegans* 199

(ii) Genes Required for Lineage-Dependent Morphogenetic Processes	203
(iii) Molecular Evidence: Genes Expressed in Particular <i>C. elegans</i> Cell Lineages	210
3. Differential Gene Expression in Embryonic Cell Lineages of the Sea Urchin	213
(i) Cell Lineage and Pattern of Morphogenesis	213
(ii) Lineage-Specific Gene Expression in Skeletogenic Primary Mesenchyme Cells	220
(iii) Differential Gene Expression in Sea Urchin Embryo Ectoderm	229
(iv) Differential Molecular Functions in Secondary Mesenchyme, Muscle, and Archenteron Cells	233
(v) Some General Aspects of Differential Gene Expression in Sea Urchin Embryos	238
4. Regional Specification and Tissue-Specific Zygotic Gene Expression in Amphibian Embryos	246
(i) Phenomenological Aspects: Origins of Differentiated Embryonic Regions	246
(ii) Molecular Indices of Differential Gene Activity in the Early Amphibian Embryo	258
5. Differential Gene Expression in the Embryogenesis of <i>Drosophila</i>	266
(i) Classes of Developmentally Important Genes	266
(ii) Genes Required for the Embryonic Specification of Neuroblasts	271
(iii) Genetic Control of the Morphogenesis of Metameric Structures in the Embryo	280

V Gene Activity during Oogenesis

1. Meroistic Oogenesis: Gene Expression in the Nurse Cell-Oocyte Complex	307
(i) Structural Organization and Developmental Origin of the Nurse Cell-Oocyte Complex	307
(ii) Transcriptional Role of Nurse Cells	315
(iii) Activity of Specific Genes in the Oocyte-Nurse Cell Complex	320
2. The Transcriptional Role of Oocyte Lampbrush Chromosomes	327
(i) Lampbrush Chromosome Structure: Transcription Units and Chromomeres	328
(ii) Complexity, Average Structural Characteristics, and Synthesis Rates for Lampbrush Chromosome RNAs	340
(iii) Transcription of Specific Sequences and Classes of Sequence in Lampbrush Chromosomes	350
(iv) Processing of mRNA Precursors in the <i>Xenopus</i> Oocyte Nucleus	358

(v)	Messenger RNAs and Interspersed Heterogeneous RNAs of the Oocyte Cytoplasm: The Logistic Role of Lampbrush Chromosomes	361
(vi)	The Accumulation of Ribosomal RNAs	376
3.	Nonmerozoistic Oogenesis without Lampbrush Chromosomes	388
(i)	RNA Synthesis in <i>Urechis</i> and Sea Urchin Oocytes	389
(ii)	Transcription and the Accumulation of Maternal RNAs during Oogenesis in the Mouse	396

VI Cytoplasmic Localization

1.	Classical Definitions of the Phenomenon of Cytoplasmic Localization in Embryos	411
(i)	Cell Lineage and Cell Fate	411
(ii)	Localization of Morphogenetic Potential in the Egg of <i>Cynthia (Styela) partita</i> and in Some Other Eggs That Display Determinate Cleavage	415
(iii)	The Early History of the Idea of Cytoplasmic Localization	422
(iv)	Summary of Classical Conclusions	426
2.	Determination of Specific Cell Lineages by Localized Components of the Egg Cytoplasm	430
(i)	Egg Cytoplasmic Determinants for the Larval Muscle Cell Lineage of Ascidian Embryos	430
(ii)	The Gut Cell Lineage of <i>Caenorhabditis elegans</i>	436
(iii)	Localization of Germ Cell Determinants	439
3.	Localization of Dorsoventral Determinants in the Cytoplasm of Molluscan and Annelid Eggs	453
(i)	Morphogenetic Significance of the Polar Lobe Cytoplasm	455
(ii)	Polar Lobe Dependent Inductive Effects	462
(iii)	Determination of the Dorsoventral Axis in Equally and Unequally Cleaving Molluscan Eggs	462
(iv)	What Are the Functional, Structural, and Molecular Constituents of the Polar Lobe Cytoplasm?	467
4.	The Ontogeny of Localization	473
(i)	Prelocalization in the Cortex of Dipteran Eggs	474
(ii)	Disposition of Maternal Cytoplasmic Determinants during Early Cleavage	484
(iii)	Localization and the Cytoskeleton: Evidence from Ascidian and Annelid Eggs	489
5.	Spatial Assignments, Regulation, and Localization in the Eggs of Sea Urchins, Amphibians, and Mammals	493
(i)	Localization and Regulation in the Sea Urchin Egg	494
(ii)	Localization in Amphibian Eggs	504
(iii)	Cell Lineage Determination in Mammalian Eggs	513

Appendix I Sequence Complexity and the Quantitative Analysis of Renaturation and Hybridization of Experiments Carried Out in Solution

- | | |
|---|-----|
| 1. Definition of Sequence Complexity | 525 |
| 2. Basic Relations between Renaturation Rate Constant and Sequence Complexity | 527 |
| 3. Renaturation of Repetitive Sequences | 531 |
| 4. Kinetics of Disappearance of Single-Strand Nucleotides and RNA Hybridization in DNA Excess | 535 |
| 5. RNA Excess Hybridization Kinetics | 538 |

Appendix II Measurement of Transcript Prevalence by Single-Stranded Probe Excess Titration

- | | |
|------|-----|
| Text | 541 |
|------|-----|

Appendix III Measurement of Rates of Synthesis or Entry into the Cytoplasm, and of Transcript Turnover Rate, from the Kinetics of Incorporation of Labeled Precursors

- | | |
|--|-----|
| 1. Behavior of Embryo Nucleoside Triphosphate Pools | 546 |
| 2. Extraction of Synthesis Rate, Cytoplasmic Entry Rate, and Decay Rate Constants from the Kinetics of Precursor Incorporation | 548 |
