	Chapter 3
Chapter 6	
THE STRUCTURE AND FUNCTION OF THE Fnu RI RESTRICTION ENDONUCLEASE	
A. Introduction	1
B. Nucleotide Sequence of the Fnu RI Recognition Sequence	1
C. Nucleotide Sequence of the Fnu RI Enzyme	211
D. DNA Mapping	211
E. X-Ray Diffraction Results	211
F. DNA Binding Properties of the 5-Methylcytosine Residues	211
G. References	212
Chapter 7	
RESTRICTION ENDONUCLEASES AND MECHANISMS OF SITE-SPECIFIC RECOGNITION AND MODIFICATION	
A. Introduction	1
B. Effect of Substitution of Sequences Recognized by the Enzymes	1
C. Effect of Substitution of Sequences Recognized by the Enzymes	1
D. References	1
PREFACE	ix
CONTRIBUTORS	xi
Chapter 1	
RESTRICTION ENDONUCLEASE: SPECIFICITIES, DIVERSITIES AND COMPUTER ANALYSIS	
Robert W. Blakesley	
I. Introduction	1
II. Table I: DNA Cleavage Frequency for Restriction Endonucleases with Known Recognition Sequences	4
III. Table II: DNA Cleavage Frequency for Restriction Endonucleases with Undetermined Recognition Sequences	7
IV. Table III: Microorganisms as Sources for Restriction Endonucleases	9
V. Table IV: Reaction Conditions for Certain Restriction Endonucleases	20
VI. Table V: Restriction Endonuclease Cross Reference: Tables I-IV, References	24
VII. Table VI: Restriction Endonuclease Site Combinations for Ligation	31
Chapter 2	
THE REACTION MECHANISM OF TYPE I RESTRICTION ENDONUCLEASES	
Robert Yuan	
I. Introduction	45
II. Genetics	50
III. Enzyme Structure	51
IV. Nature of DNA Recognition and Cleavage Sites	54
V. Mechanism of Restriction	58
VI. Mechanism of Modification	64
VII. Mechanism of Antirestriction Systems	66
VIII. Projections and Speculations	68

Chapter 3

SEQUENCE-SPECIFIC ENDONUCLEASES:
GENERAL PROPERTIES AND SPECIFIC CHARACTERISTICS

Jack G. Chirikjian and Jay George

I.	Introduction	74
II.	Sequence-Specific Endonucleases as Reagents in Molecular Biology	75
III.	Matrix Bound Sequence-Specific Endonucleases	78
IV.	General Methods for Determining Sequence-Specific Endonuclease Activity	81
V.	Strategies for Elucidating the Recognition of DNA by Sequence-Specific Endonucleases	82
VI.	Catalytic Diversities Among Isoschizomers	92
VII.	Effect of Hydrophobic Reagents on Sequence Recognition and Catalysis of Sequence-Specific Endonucleases	93
VIII.	Conclusions	98

Chapter 4

CLEAVAGE OF "SINGLE-STRANDED" VIRAL DNAs BY CERTAIN RESTRICTION ENDONUCLEASES

Robert D. Wells and Sandra K. Neuendorf

I.	Introduction	101
II.	Characterization of the <u>Hae</u> III Reaction on $\emptyset X174$, M13 and f1 DNAs	102
III.	Features of DNA Structure Recognized by the Endonucleases	103
IV.	Characteristics of Other Restriction Endonucleases	105
V.	Types of DNA Substrates Cleaved	108
VI.	Some Properties of Isoschizomers	109
VII.	Application of the Technique for Cleaving Other DNAs	109
VIII.	Reaction of DNA Methylases on Single-Stranded DNA	110
IX.	Prospects for the Future	110

Chapter 5

CLEAVAGE PROPERTIES OF SITE-SPECIFIC RESTRICTION ENDONUCLEASES

Kamalendu Nath and Barbara A. Azzolina

I.	Introduction	113
II.	Site Preference by Restriction Endonucleases	114
III.	Perturbations in Restriction-Endonuclease Cleavage Properties	120
IV.	Application of Manipulated Restriction Endonuclease Cleavage	128
V.	Summary	129

Preface

Chapter 6

THE STRUCTURE AND FUNCTION OF THE Eco RI RESTRICTION ENDONUCLEASE

John M. Rosenberg, Herbert W. Boyer, and Patricia Greene

I. DNA Mapping	132
II. X-Ray Diffraction Analysis of <u>Eco</u> RI Endonuclease Crystals	141
III. DNA Binding Properties of <u>Eco</u> RI Methylase and Endonuclease	142
IV. Degeneracies in Restriction Recognition Sequences	153

Chapter 7

STRUCTURES AND MECHANISMS OF Eco RI DNA RESTRICTION AND MODIFICATION ENZYMES

William E. Jack, Robert A. Rubin, Andrea Newman and Paul Modrich

I. Structural Properties	166
II. Catalytic Properties	167
III. Enzyme-Substrate Interactions	171
IV. Cloning and the Structural Genes	175

Chapter 8

RELAXED SEQUENCE SPECIFICITIES OF Eco RI ENDONUCLEASE AND METHYLASE:
MECHANISMS, POSSIBLE PRACTICAL APPLICATIONS, AND USES IN
DEFINING PROTEIN-NUCLEIC ACID RECOGNITION MECHANISMS

Charles P. Woodbury, Jr. and Peter H. Von Hippel

I. Introduction	182
II. Conditions for Relaxation of Enzymatic Specificity	184
III. Sequence Specificity of Noncanonical <u>Eco</u> RI Activities	186
IV. Is Relaxed Specificity Due to an Impurity	187
V. The Role of Binding Affinity in Relaxed Specificity	188
VI. Recognition Contacts for the Endonuclease	190
VII. Recognition Contacts for the Methylase	195
VIII. General Features of the Endonuclease Recognition Sequence	197
IX. Free Energy Considerations in Non-Sequence-Specific and Sequence-Specific Binding	199
X. Applications of the Relaxed-Specificity Reactions of Endonuclease and Methylase	201
XI. Appendix	203

Chapter 9

THE RESTRICTION-MODIFICATION ENZYMES OF Bacillus sphaericus R.

Pal Venetianer and Antal Kiss

I.	Biochemical Characterization of the <u>Bsp</u> I Restriction Endonuclease	209
II.	Biochemical Characterization of the <u>Bsp</u> I Modification Methylase	212
III.	The Genes of the <u>Bsp</u> Restriction-Modification System	212
IV.	Conclusion	214

Chapter 10

CLONING OF THE Pst I RESTRICTION-MODIFICATION SYSTEM

Roxanne Y. Walder, James L. Hartley, John E. Donelson and Joseph A. Walder

I.	Introduction	217
II.	Selection and Characterization of Clones Carrying the <u>Pst</u> I Restriction-Modification System	218
III.	Transformation of <u>P. stuartii</u> 164: Construction of a Stable Overproducing Strain	221
IV.	Gene Products of the <u>Pst</u> I Restriction-Modification System	223
V.	In vitro Transcription of the <u>Pst</u> I System	224
VI.	Discussion	226

Chapter 11

THE CLONED Hha II RESTRICTION-MODIFICATION SYSTEM

Michael B. Mann

I.	Procedure for Cloning Restriction-Modification (R-M) Systems	230
II.	A Clone that Overproduces the <u>Hha</u> II R-M Gene Products	231
III.	Biologic Properties of the Cloned <u>Hha</u> II R-M System	232
IV.	The Problem of Site-Specific DNA-Protein Interaction	234
V.	<u>Hha</u> II*, A Form of <u>Hha</u> II with Grossly Altered Site Specificity	235

Chapter 12

PURIFICATION OF THE SEQUENCE-SPECIFIC ENDONUCLEASE Pal I

George W. Rushizky

I.	Growth of Cells	240
II.	Purification of <u>Pal</u> I	240
III.	Physical and Chemical Properties of the Enzyme	241
IV.	Purification of Other Enzymes	242
