CONTENTS

1. INTRODUCTION 1

1.1 *Some definitions* 2
1.2 *The development of biometry* 3
1.3 *The statistical frame of mind* 5

2. DATA IN BIOLOGY 8

2.1 *Samples and populations* 8
2.2 *Variables in biology* 10
2.3 *Accuracy and precision of data* 13
2.4 *Derived variables* 16
2.5 *Frequency distributions* 19

3. THE HANDLING OF DATA 32

3.1 *Desk calculators* 33
3.2 *Electronic desk calculators* 35
3.3 *Computers* 35
3.4 *Efficiency and economy in data processing* 38

4. DESCRIPTIVE STATISTICS 40

4.1 *The arithmetic mean* 41
4.2 *Other means* 43
4.3 *The median* 45
4.4 *The mode* 48
4.5 *Simple statistics of dispersion* 49
4.6 *The standard deviation* 50
4.7 *Sample statistics and parameters* 53
4.8 *Coding of data before computation* 55
4.9 *Machine methods for computing mean and standard deviation* 57
4.10 *The coefficient of variation* 62

5. INTRODUCTION TO PROBABILITY DISTRIBUTIONS: BINOMIAL AND POISSON 65

5.1 *Some simple considerations of probability, random sampling and hypothesis testing* 67
5.2 *The binomial distribution* 71
5.3 *The Poisson distribution* 83
5.4 *Some other discrete probability distributions* 95

6. THE NORMAL PROBABILITY DISTRIBUTION 99

6.1 *Frequency distributions of continuous variables* 99
6.2 *Derivation of the normal distribution* 102
6.3 *Properties of the normal distribution* 105
6.4 *Applications of the normal distribution* 110
6.5 *Fitting a normal distribution to observed data* 112
6.6 *Skewness and kurtosis* 112
6.7 *Graphic methods* 119
6.8 *Other continuous distributions* 125

7. ESTIMATION AND HYPOTHESIS TESTING 127

7.1 *Distribution and variance of means* 128
7.2 *Distribution and variance of other statistics* 135
7.3 *Introduction to confidence limits* 138
7.4 *Student's t-distribution* 143
7.5 *Confidence limits based on sample statistics* 145
7.6 *The chi-square distribution* 150
7.7 *Confidence limits for variances* 153
7.8 *Introduction to hypothesis testing* 155
7.9 *Tests of simple hypotheses employing the normal and t-distributions* 166
7.10 *Testing the hypothesis* H_0: $\sigma^2 = \sigma_0^2$ 172

8. INTRODUCTION TO ANALYSIS OF VARIANCE 175

8.1 *The variances of samples and their means* 176
8.2 *The F-distribution* 181
8.3 *The hypothesis* H_0: $\sigma_1^2 = \sigma_2^2$ 185
8.4 *Heterogeneity among sample means* 186
8.5 *Partitioning the total sum of squares and degrees of freedom* 194
8.6 *Model I anova* 198
8.7 *Model II anova* 201

9. SINGLE CLASSIFICATION ANALYSIS OF VARIANCE 204

9.1 *Computational formulas* 205
9.2 *General case: unequal* n 206
9.3 *Special case: equal* n 214
9.4 *Special case: two groups* 216
9.5 *Special case: a single specimen compared with a sample* 223
9.6 *Comparisons among means: a priori tests* 226
9.7 *Comparisons among means: a posteriori tests* 235
9.8 *Finding the sample size* n *required for a test* 246

10. NESTED ANALYSIS OF VARIANCE 253

10.1 *Nested anova: design* 253
10.2 *Nested anova: computation* 256
10.3 *Nested anovas with unequal sample sizes* 274
10.4 *The optimal allocation of resources* 287

11. TWO-WAY ANALYSIS OF VARIANCE 299

11.1 *Two-way anova: design* 299
11.2 *Two-way anova with replication: computation* 301
11.3 *Two-way anova: significance testing* 309
11.4 *Two-way anova without replication* 320
11.5 *Paired comparisons* 328
11.6 *Unequal subclass sizes* 333
11.7 *Missing values in a randomized block design* 337

12. MULTIWAY ANALYSIS OF VARIANCE 343

12.1 *The factorial design* 343
12.2 *A three-way factorial anova* 344
12.3 *Higher-order factorials* 356
12.4 *Other designs* 362
12.5 *Anova by computer* 364

13. ASSUMPTIONS OF ANALYSIS OF VARIANCE 367

13.1 *A fundamental assumption* 368
13.2 *Independence* 368
13.3 *Homogeneity of variances* 369
13.4 *Normality* 377
13.5 *Additivity* 377
13.6 *Transformations* 380
13.7 *The logarithmic transformation* 382
13.8 *The square root transformation* 384

13.9 *The arcsine transformation* 386
13.10 *Nonparametric methods in lieu of a single classification anova* 387
13.11 *Nonparametric methods in lieu of a two-way anova* 397

14. REGRESSION 404

14.1 *Introduction to regression* 405
14.2 *Models in regression* 408
14.3 *The basic computations* 410
14.4 *Machine computation: single Y for each value of X* 417
14.5 *Tests of significance in regression* 420
14.6 *More than one value of Y for each value of X* 428
14.7 *The uses of regression* 440
14.8 *Estimation of X from Y* 446
14.9 *Comparison of regression lines* 448
14.10 *Linear comparisons in anova* 458
14.11 *Orthogonal polynomials* 468
14.12 *Transformations in regression* 476
14.13 *Model II regression* 481
14.14 *Advanced topics in regression* 486

15. CORRELATION 494

15.1 *Correlation and regression* 495
15.2 *The product-moment correlation coefficient* 498
15.3 *Computation of the product-moment correlation coefficient* 508
15.4 *Significance tests in correlation* 515
15.5 *Applications of correlation* 523
15.6 *Principal axes and confidence regions* 526
15.7 *Nonparametric tests for association* 532
15.8 *Advanced topics in correlation* 539

16. ANALYSIS OF FREQUENCIES 549

16.1 *Tests for goodness of fit: introduction* 550
16.2 *Single classification goodness of fit tests* 560
16.3 *Replicated tests of goodness of fit* 575
16.4 *Tests of independence: two-way tables* 585
16.5 *Tests of independence: multiway tables* 601
16.6 *Testing equality of two percentages* 607
16.7 *Randomized blocks for frequency data* 610

17. MISCELLANEOUS METHODS 621

17.1 *Combining probabilities from tests of significance* 621
17.2 *Tests for randomness: runs tests* 624
17.3 *Randomization tests* 629
17.4 *The future of biometry: data analysis* 637

APPENDIXES 643

*A*1 *Mathematical appendix* 643
*A*2 *Operation of desk calculators* 656
*A*3 *Statistical computer programs* 667
*A*4 *Tabular guide to statistical methods* 743
