Introduction	1
------------------------	---

Part 1 Gene Interaction at the Cellular Level

1.1 Differential Activity of Genes as a Basis for Cell Differentiation	7
1.1.1 The Leading Role of the Nucleus in Ontogenic Regulation	7
1.1.2 The Expression of Differential Gene Activity in Transcriptional Level	11
1.1.3 Temporal Variability of Morphogenetic Nuclear Activity	18
1.1.4 Puffing as a Cytological Indicator of Differential Gene Activity	22
1.1.5 Gene Amplification	31
1.1.6 The Interactional Effect of Certain Genes on the Transcription of Ribosomal Genes	33
1.1.7 Dose Compensation of Genes and Transcription	39
1.2 The Realization of Differential Gene Activity on the Post-Transcriptional, Translational, and Post-Translational Levels	49
1.2.1 The Stages of Gene Activity Realization in the Phenotype	49
1.2.2 Spatial Heterogeneity of Certain Isoenzymes and Proteins	63
1.2.3 Temporary Specificity in the Establishment of the Isozyme Spectrum	71
1.2.3.1 Nonallelic Genes Controlling the Synthesis of Isozymes Which Form Hybrid Patterns	71
1.2.3.2 Control of the Synthesis of Isozymes and Nonrelated Enzymes by Nonallelic Genes	74
1.2.3.3 Allelic Genes	83
1.2.4 Isozymes and the Maternal Effect	86
1.2.5 The Influence of Gene Modifiers on the Phenotypic Expression of Enzymes	90

1.3	The Phenomenon of Allelic Exclusion	108
1.3.1	The Concept of Allelic Exclusion, Its Phenomenology	108
1.3.2	Suppressive Action of Allotypic Antibodies on the Synthesis of Immunoglobulins of Corresponding Specificity	111
1.3.3	Examples of True Allelic Exclusion	114
1.3.3.1	The Differential Activity of Parental Genomes . . .	114
1.3.3.2	The Differential Activity of X Chromosomes in Mam- mals	115
1.3.3.3	Cases of Functional Inactivation of Homologous Autosomal Loci	118
1.3.3.4	Heteromorphic Puffs	118
1.3.3.5	Heteromorphism of the Lateral Loops in "Lamp- brush" Chromosomes	120
1.3.3.6	The Differential Activity of the Nucleolar Organizer	121
1.4	Nuclear-Cytoplasmic Interactions. The Basis for the Regulation of Gene Activity	125
1.4.1	Segregation of Ooplasm	125
1.4.2	Control of Nuclear Function by Cytoplasmic Factors	133
1.4.3	The Nature of Cytoplasmic Factors Controlling Nuclear Function	138
1.4.4	Molecular Mechanisms for the Interaction of Regula- tory Proteins with Chromosomal DNA	143

Part 2 Gene Interaction at the Tissue Level

2.1	Functional-Genetic Mosaicism in Cell Regulation . .	155
2.1.1	Determination and Differentiation – the Properties of the Cell Populations	155
2.1.2	The Phenomenon of Transdetermination in Cell Po- pulations	159
2.1.3	The Heterogeneity of Cell Populations	162
2.1.3.1	Structural-Genetical Mosaicism	163
2.1.3.2	Functional-Genetical Mosaicism	169
2.2	Genetic Heterogeneity and the Establishment of Tissue Systems During Development	173
2.2.1	Interactions Between Cell Populations During Mor- phogenesis	173
2.2.2	The Genetic Basis of Inductive Interactions of Em- bryonic Layers During Early Embryogenesis	182
2.2.3	Significant Time-Factors in the Genetic Regulation of Ontogenesis	188
2.2.4	Interaction at the Cell and Tissue Levels in the Genetic Regulation of Ontogenesis	191

2.2.5	The Function of Genes in Terminal Cell Differentiation	196
2.3	Genetic Regulation of Ontogenesis on the Organismal Level	209
2.3.1	Hormones and Development	209
2.3.2	Genetic Regulation and the Hormonal System	213
2.3.3	Other Factors in the Regulation of Gene Activity on the Organismal Level	221
2.3.4	The Genome and the Function of Tissue Systems	223
2.4	The Organization of Systems Which Control Differential Gene Expression	233
2.4.1	The Organization of Gene Regulatory Systems in Bacteria and Phage and the Function of These Systems in Ontogenesis	233
2.4.2	Hypotheses on the Organization of the Gene Regulatory Systems in Eukaryotes	239
2.4.2.1	Bithorax Model	240
2.4.2.2	Transposable Genetic Elements and the As-Ds System in Corn	242
2.4.2.3	The Scute Locus in <i>Drosophila</i>	244
2.4.3	Molecular Organization of the Genome of Higher Eukaryotic Organisms	249
2.4.4	The Multilevel Character of Gene Regulation of Ontogenesis in Eukaryotic Organisms	259
2.4.5	A Hypothesis for the Temporal Organization of the Gene Systems Controlling Development	262
2.4.6	Phases of Gene Activity in Ontogenesis	271
	Conclusion	274
