|                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------|-----|
| Plant Breeding 1910-1984. . . . .                                                                                          | 1   |
| Glenn W. Burton                                                                                                            |     |
| Progress in Conventional Plant Breeding . . . . .                                                                          | 17  |
| Donald N. Duvick                                                                                                           |     |
| Philosophy and Methodology of an International<br>Wheat Breeding Program' . . . . .                                        | 33  |
| S. Rajaram, B. Skovmand, and B.C. Curtis                                                                                   |     |
| IRRI Breeding Program and Its Worldwide Impact on<br>Increasing Rice Production. . . . .                                   | 61  |
| Gurdev S. Khush                                                                                                            |     |
| Ideotype Research and Plant Breeding. . . . .                                                                              | 95  |
| Donald C. Rasmusson                                                                                                        |     |
| Physiological Aspects of Varietal Improvement . . . . .                                                                    | 121 |
| L.T. Evans                                                                                                                 |     |
| Quantitative Genetic Principles in Plant Breeding . . . . .                                                                | 147 |
| R.J. Baker                                                                                                                 |     |
| The Pathological and Entomological Framework of Plant<br>Breeding. . . . .                                                 | 177 |
| Arthur L. Hooker                                                                                                           |     |
| The Genomic System of Classification as a Guide<br>to Intergeneric Hybridization with the<br>Perennial Triticeae . . . . . | 209 |
| Douglas R. Dewey                                                                                                           |     |
| Evolutionary Relationships and Their Influence on<br>Plant Breeding. . . . .                                               | 281 |
| Gordon Kimber                                                                                                              |     |

|                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------|-----|
| Mutations in Wheat That Raise the Level of Meiotic<br>Chromosome Pairing. . . . .                                | 295 |
| E.R. Sears                                                                                                       |     |
| Chromosome Manipulation in Plant Breeding: Progress<br>and Prospects. . . . .                                    | 301 |
| Ralph Riley and Colin N. Law                                                                                     |     |
| <u>In Vitro</u> Approaches to Interspecific Hybridization<br>and Chromosome Manipulation in Crop Plants. . . . . | 323 |
| G.B. Collins, N.L. Taylor, and J.W. DeVerna                                                                      |     |
| The Significance of Doubled Haploid Variation . . . . .                                                          | 385 |
| P.S. Baenziger, D.T. Kudirka, G.W. Schaeffer,<br>and M.D. Lazar                                                  |     |
| Use of Protoplasts: Potentials and Progress . . . . .                                                            | 415 |
| E.C. Cocking                                                                                                     |     |
| Somaclonal Variation: Theoretical and Practical<br>Considerations. . . . .                                       | 427 |
| T.J. Orton                                                                                                       |     |
| Nuclear Architecture and Its Manipulation . . . . .                                                              | 469 |
| Michael D. Bennett                                                                                               |     |
| Selecting Better Crops from Cultured Cells. . . . .                                                              | 503 |
| Carole P. Meredith                                                                                               |     |
| Molecular Analysis of Alien Chromatin Introduced<br>into Wheat . . . . .                                         | 529 |
| R. Appels and Lyndall B. Moran                                                                                   |     |
| Genetic Aspects of Symbiotic Nitrogen Fixation. . . . .                                                          | 559 |
| Sharon R. Long                                                                                                   |     |
| <u>Chlamydomonas reinhardtii</u> , A Potential Model System for<br>Chloroplast Gene Manipulation . . . . .       | 577 |
| J.D. Rochaix, J. Erickson, M. Goldschmidt-Clermont,<br>M. Schneider, and J.M. Vallet                             |     |
| Toward An Understanding of Gene Expression in Plants. . . . .                                                    | 605 |
| Roger N. Beachy                                                                                                  |     |
| Perspectives on Genetic Manipulation in Plants. . . . .                                                          | 627 |
| John R. Bedbrook                                                                                                 |     |
| Gene Manipulation and Plant Breeding. . . . .                                                                    | 637 |
| N.W. Simmonds                                                                                                    |     |
