

# Contents

## Chapter 1 Historical Introduction 1

- Early history of chemistry 1
- Discovery of spermine phosphate 1
- Fractionation of air 2
- Early modern chemistry 3
- Origins of biochemistry 3
- Studies on amines 4
- From amines to chemical industry 4
- Professionalization of biochemical research 4
- Microbiology and diamines 5
- Essentiality of amino acids and amines 5
- Structure of spermine and discovery of spermidine 6
- Spermine content of human tissues 6
- Appendix—A time line: Events in chemical and biochemical prehistory of polyamines 8

## Chapter 2 Structures and Syntheses of Polyamines 16

- Isolation of diamines 16
- Diamines as precursors and analogs 16
- Isolation and properties of spermine 18
- Structure and synthesis of spermine 18
- Structure and synthesis of spermidine 19
- Syntheses and reactions of amines 19
- Preparing for metabolic study 21
- Site-specific syntheses 21
- Guanidine derivatives 22

## Chapter 3 Properties and Analysis of Polyamines 25

- Basicity of amines 26
- Estimation of pK by nuclear magnetic resonance (NMR) 26
- Reactions of amines 28
- Reactions of quantitative analysis 31
- Other reactions 32
- Oxidative reactions 32
- Separation techniques 32
- Paper chromatography 33
- Paper electrophoresis 33
- Thin-layer chromatography 33
- Ion-exchange separation and HPLC 34
- Enzymes and enzymatic assays 37
- Gas-liquid chromatography (GLC) and GC-MS 38
- Immunoassay 40
- Analytical accuracy 41

## Chapter 4 Macrocyclic Polyamines—A Digression? 44

- Coordination compounds and some reactions of copper 45
- Platinum and palladium complexes 47
- Enter the macrocyclic polyamines 47
- Biological activities of macrocyclic polyamines 49
- Summary 51

**Chapter 5****Free Polyamines and Their Distribution 53**

- Odors and amines 55
- Discovery of hydroxyputrescine and hydroxyspermidine 55
- Spermine among microbes 57
- Polyamines and thermophilic microorganisms 57
- Polyamines in microbial evolution: The problem of the RNA world 60
- Spermine in bacteria 60
- Studies with cyanobacteria 61
- Polyamines in nucleated cells 61
- Putrescine and homospermidine 64
- Adaptation to salt 65
- Summary and conclusions 66

**Chapter 6****Polyamine Oxidases and Dehydrogenases 69**

- Histaminase and discovery of diamine oxidase (DAO) 69
- Toxicity of spermine 70
- Antibacterial action of oxidized spermine 70
- Role of spermine in human prostatic fluid and semen 70
- Toxic aldehyde products of polyamine oxidation 71
- Problem of primary toxic agent 72
- New amine oxidases and problems of nomenclature 73
- Some characteristics of classical MAO 74
- Some early copper-containing proteins and enzymes 75
- Copper-containing bovine plasma amine oxidase 75
- Nature of organic cofactor 76
- Animal enzymes: Histaminase and amiloride-binding protein 78
- Peptidyl-lysyl amine oxidases and copper-related cross-linking 79
- Some plant amine oxidases 79
- Stereochemical specificity of animal and plant enzymes 80
- Fungal copper-containing oxidases 80
- Some bacterial enzymes 81
- Methylamine dehydrogenases 81
- Amine oxidation and polyamine assay 81
- Organic products of copper amine oxidases 81
- Organic products of some plant, fungal, and microbial PAOs and dehydrogenases 82
- H<sub>2</sub>O<sub>2</sub> in assay of amine oxidases and polyamines 83

- Animal flavin-containing PAO 84
- Nonacetylated polyamines and plant flavin-containing oxidases 85
- Pyrroline oxidation products 85
- Inhibitors and roles of amine oxidases 86
- Hydrogen peroxide as toxic product of amine oxidases 89
- Summary 89

**Chapter 7****Bacterial Metabolism and Polyamines 94**

- Why study bacteria? 94
- A biological and biochemical context of the bacteriological world 94
- Maintaining an intact cell 97
- Polyamines and the bacterial envelope 97
- Ornithine and diamines as cell wall and membrane constituents 99
- Osmoregulation in bacteria 99
- Early observations on transport of polyamines 101
- Inorganic cations and polyamines 103
- Polyamines and isolation of internal organelles:
  - Ribosomes 104
  - Nucleoid 107
- Activities of bacterial chromosome: RecA and homologous recombination 108
- Repair of DNA 109
- DNA replication 109
- Synthesis, accumulation, regulation, and elimination in developing cultures 110
- Growth phases 110
- Chemostat and control of rate of growth and cell size 112
- Acetylation in batch cultures 113
- Studies on stringent and relaxed responses 114
- Formation of glutathionylspermidine 115
- E. coli* deficient in polyamine 116
- Recent observations on polyamine transport 116
- Essentiality of polyamines 118

**Chapter 8****Biosynthesis and Metabolism of Diamines in Bacteria 122**

- Approaching metabolism 122
- Early studies on decarboxylation of ornithine and arginine 122

Assay of ODC (EC 4.1.1.17)	124
Decarboxylases of basic amino acids	125
Guanine nucleotide activators and inhibitors of ODC	127
Polyamines as inhibitors of decarboxylases	127
PLP binding sites in decarboxylases	127
Aminotransferases and metabolism of putrescine	128
PLP-mediated reactions	128
Stereochemistry of enzymatic decarboxylation	129
Synthetic inhibitors of bacterial decarboxylases	129
Inhibition of <i>E. coli</i> bODC and bADC by <i>E. coli</i> proteins	132
Biosynthesis of ornithine and arginine	132
Bacterial pathways of arginine and ornithine catabolism	133
Genetic blocks in synthesis of putrescine	135
cAMP and expression of <i>SpeA</i> , <i>SpeB</i> , and <i>SpeC</i> genes	136
Cloning and expression of <i>SpeA</i> (bADC), <i>SpeB</i> (AUH), and <i>SpeC</i> (bODC) genes	136
Biosynthesis of lysine	137
LDC and sources of cadaverine	138
Other routes in metabolism of cadaverine and lysine	139

## Chapter 9

### Bacterial Paths to Spermidine and Other Polyamines 142

<i>Escherichia coli</i> as an experimental system	142
Discovery of enzymatic synthesis of spermidine in <i>E. coli</i>	143
Expanding role of AdoMet	145
Properties of AdoMet	145
Properties of decarboxylated AdoMet	146
AdoMet synthetase (methionine adenosyltransferase)	147
Analogues of methionine and inhibitors of AdoMet synthetase	148
Biosynthesis of methionine	148
Other reactions of methionine	150
Isolation and properties of AdoMetDC	151
Pyruvoyl enzymes and their precursors	152
Activators and inactivation of AdoMetDC	153
Development of inactivating inhibitors of AdoMetDC	153
Bacterial mutants deficient in AdoMetDC	154
Spermidine synthase, a bacterial propylamine transferase	155

Mechanism of spermidine synthase reaction	156
Inhibitors of spermidine synthase reaction	157
Bacterial metabolism of MTA	158
Alternative synthetic paths of spermidine and norspermidine	160
Synthesis of homospermidine	161

## Chapter 10

### Microbial Eucaryotic Systems: Fungi and Slime Molds 165

Fungal systems	165
Classifying fungi and slime molds	166
Biological properties of <i>Saccharomyces cerevisiae</i> and <i>Neurospora crassa</i>	166
Polyamines in life of <i>S. cerevisiae</i>	167
Aminopropyl transfer in strains of <i>S. cerevisiae</i>	171
Enzymes of polyamine pathway	172
ODC	172
AdoMet synthetase	172
AdoMetDC	172
Propylamine transferases	174
New polyamine functions in yeast systems	174
Hypusine and translation	174
Processing of tRNA precursors	175
Splicing of mRNA	175
Studies with <i>N. crassa</i>	175
Vacuolar cations and anions in fungi	177
Problem of concentration of free polyamines and metabolites	177
Putrescine-deficient <i>Neurospora</i> and polyamine pathway	178
Regulation of ODC and polyamine pathway	179
Studies with <i>Physarum polycephalum</i>	179
<i>Dictyostelium discoideum</i> and polyamines	180

## Chapter 11

### Polyamines in the Animal Cell 184

Polyamines as nutrients in clonal growth	185
Early data on tissue polyamines	185
Data on development	186
Osmotic effects on polyamine metabolism	187
Cytochemical studies	189
Cellular aging	189
Studies of suspension cultures	190
Effects of inhibitors on cell cultures	191
Enucleation and distribution of amines	192

- Studies with monolayers 193
- Activation of human lymphocytes 196
- Experiments with bovine lymphocytes 197
- Additional dissections of cell cycle 197
- Reversing tumorigenicity 199
- Transformed cells 200
- Summary and comment 203

### Chapter 12

#### Pathways of Polyamine Metabolism in Animals 208

- Nitrogen metabolism, with special reference to arginine and ornithine 209
- Nitrogen metabolism, with special reference to methionine 211
- Discovery of polyamine metabolites 211
  - Polyamines of nerve tissue 211
  - Urinary excretion of polyamines 213
  - Urinary excretion of polyamines and their metabolites 215
  - Blood polyamines and their conjugates 215
- Acetylation and catabolic cycles 216
- Synthesis of GABA from putrescine 217
- Brief summary scheme of biosynthesis and catabolism 220
- Discovery of regulation of ODC in liver 220
- Hormonal control of polyamine synthesis in gonadal and accessory tissues 222
- Hypusine, a posttranslational product of spermidine metabolism 224
- Biosynthesis and possible role of hypusine 225
- Summary 226

### Chapter 13

#### Biosynthetic Enzymes of Animal Tissues and Cells: Part I Properties and Regulation of Ornithine Decarboxylase 231

- Early studies on ODC 232
- Assay of tissue ODC 232
- Cellular sites of ODC activity 232
- Studies on role and purification of ODC 233
- Properties of purified mammalian ODC 233
- Charge heterogeneity and modification of ODC 234
- In vitro activity of ODC 235
- ODC as lysine decarboxylase (LDC) 236

- Mechanism of ODC reaction 236
- Regulation of ODC by polyamines and discovery of antizyme 237
- Pursuit of antizyme and its role 238
- Regulation of synthesis of antizyme 239
- Exploiting mutations in polyamine metabolism 240
- Roles of arginine and arginase 240
- ODC-overproducing mutants 241
- Determination of nucleotide and amino acid sequences 241
- Phosphorylation of ODC 242
- Isolation and analyses of ODC genes of mouse and rat 242
- Regulatory function of cAMP 243
- Methylation of ODC gene and its expression 243
- Human *Odc* and its effects in transgenic mice 243
- Transcription of ODC gene and nature of ODC mRNA 245
- Translational controls of ODC 246
- In vitro studies of translation 247
- ODC degradation 248
- ODC structure and its stability in cells 249
- Activity and degradation of ODC 250
- Proteolytic degradation of ODC 250
- Inhibition of mammalian ODC 250
- Summary 254

### Chapter 14

#### Mammalian Biosynthetic Enzymes: Part II 260

- Methionine and AdoMet 261
  - Inhibitors of methionine adenosyltransferase 264
  - AdoMet synthetase 264
  - Transport of AdoMet 264
- AdoMetDC 265
  - dAdoMet 266
  - Physiological regulation of AdoMetDC in animals 267
- Discovery and processing of enzyme precursor 268
- Genetic determinants of AdoMetDC 269
- Molecular regulation of enzyme expression by polyamines and their inhibitors 270
- MGBG and its toxicity 270
- Propylamine transferases 273
  - Specificity of spermidine synthase 274
  - Specificity of spermine synthase 275
  - Human gene for spermidine synthase 276
  - Inhibitors of spermidine synthase 277

- Inhibitors of spermine synthase 278
- Metabolism of MTA 279
  - Isolation and properties of MTA phosphorylase 280
  - From MTA to methionine 281

### Chapter 15 Thinking About Cancer: Carcinogenesis Initiation 287

- Initiation and promotion 287
- Mutagenesis and alkylation 288
- Detection of mutagenesis and antimutagenesis 288
- Polyamines in tests of mutagenicity 289
- Oncogenicity of acrolein 290
- Chemical effects of nitrous acid 290
- Mutagenicity of nitrosamines 291
- Converting polyamines to mutagens 291
- The nitrite problem and biosynthesis of nitric oxide 292
- Nitric oxide adducts and mutagenesis 293

### Chapter 16 Polyamine Metabolism and Promotion of Tumor Growth 296

- ODC and tumor promotion in mouse skin 296
- Complexities of promotion and its inhibition 297
- Retinoic acid and ODC induction 297
- Protein kinases and control of ODC 298
- Sphingosine and inhibition of PKC 299
- Heterogeneity of tumor ODC 299
- Essentiality of ODC to tumor formation in mouse skin 300
- Of mice, rats, and humans 301
- Multistage carcinogenesis in rodent liver 301
- Ethionine and the hypomethylation problem 301
- ODC in human cancers 302
- Other enzymes of polyamine metabolism as possible cancer markers 302
- Accumulation of polyamine in tumor cells 303
- Fate of exogenous putrescine and spermidine 303
- Can exogenous ornithine and arginine regulate tumorigenesis? 305
- Detecting cancer markers 305
- Erythrocytic polyamines 306
- Analysis of CSF and brain tumors 307
- Putrescine and tumorigenesis 308
- Catabolic source of putrescine 308

- SSAT: The inducible  $N^1$ -acetyl transferase 310
- Nuclear polyamine and histone  $N$ -acetylases 312
- Deacetylation of  $N^8$ -acetylspermidine 312
- SSAT induction by polyamine analogues 313
- SSAT protein and gene 314

### Chapter 17 Surviving Cancers: Controlling the Disease 320

- Evolution of therapeutic modalities 320
- Monitoring chemotherapy 320
- Anticancer antibiotics: The bleomycins 320
- Provoking cell death: Effects of hyperthermia 323
- Phenomena of apoptosis 324
- Anticancer drugs: Blocking biosynthesis of putrescine 325
- MGBG as sole or combined antitumor agent 328
- New MGBG-like analogues and activities 329
- Inhibition of synthesis of spermidine and spermine 330
- Effects with methionine and its analogues 330
- Analogues depleting and replacing normal amines 331
- Approaching chemotherapy of gastrointestinal cancer 332
- Polyamines in chemoprevention of cancer 334

### Chapter 18 Mostly Protozoans: Some Third World Parasites 340

- A peek at helminths 340
- Approaching Trypanosomes 341
- Studies on Tetrahymena 341
- Studies on Acanthamoeba 342
- How polyamines entered research on Trypanosomes 342
- Relating curative effects of DFMO to effects on polyamine metabolism 344
- Synergy of DFMO and bleomycin 345
- From mice to humans 345
- Methionine metabolism as target in Trypanosomes 346
- AdoMet and resistance of Trypanosomes to DFMO 348
- Metabolic stability of trypanosomal ODC 348

Trypanothione: Novel derivative of glutathione (GSH) 349

Trypanothione in life of *C. fasciculata* 351

Trypanothione in chemotherapy of African trypanosomiasis 351

Trypanothione reductase 352

Inhibitors of trypanothione reductase 353

Trypanothione peroxidase 353

Functions of GSH 354

Aspects of oxidative stress 354

Exploitation of oxidative stress 355

Approaching Chagas disease and Leishmaniasis 356

Kinetoplast DNA and DNA topoisomerases 357

Forays into malarial disease 358

Polyamines and vaginitis 360

Concluding remarks 360

## Chapter 19 Viruses 366

Historical introduction 366

Bacterial viruses 367

Polyamines of T-even bacteriophages 367

Synthesis of T-even viral polymers and polyamine biosynthesis 368

Synthesis of viral polymers in polyamine-depleted *E. coli* mutants 369

Early mRNA and hydrolysis of AdoMet in T3 infection 371

DNA phages and topoisomerases 372

Compaction of DNA 374

Head-full hypothesis 376

DNA injection 378

Putrescinylation of thymine in *Pseudomonas* phage 378

RNA bacteriophages 379

Animal DNA viruses 381

Vaccinia virus 381

Herpes virus Type I (HSV1) 382

HCMV 382

Animal RNA viruses 384

Data on picornaviruses 384

Multiplication of Semliki Forest virus (SFV) 385

Plant viruses 386

TMV 387

TYMV 387

Polyamine metabolism in TYMV-infected plant cells 390

Concluding remarks 391

## Chapter 20 Plant Metabolism 396

Assay of plant polyamines 397

Data on plant (and food) content of polyamines 397

Plant polyamines 398

Photosynthetic bacteria and algae 399

Polyamine distribution in tissues of higher plants 401

Putrescine biosynthesis and mineral deficiency 402

A path of nitrogen assimilation 403

Putrescine and osmotic stress 404

Light controls 405

Other environmental effects 405

Radical scavenging 405

Toxicity of paraquat 406

Metabolism of arginine 406

ADC 406

Plant ODC 407

Curing plants of fungal infections 407

Path from agmatine to putrescine 408

Guanidino compounds and transamination 409

Biosynthetic origins of plant methionine 410

AdoMet and its biosynthesis 411

Origins of azetidine-2-carboxylic acid 411

S-methylcysteine and S-methylmethionine (SMM) 412

Methylation reactions and fate of S-adenosylhomocysteine (AdoHcy) 412

Pathways for synthesis of spermidine and spermine 412

Polyamines in plant cells: Dormancy break and embryogenesis 414

Protoplasts 415

Stages of plant development 415

Floral initiation and polyamine conjugates 417

Free and bound polyamines 418

Hydroxycinnamoyl amides 420

Biosynthesis and metabolism of hydroxycinnamoyl amides 422

Metabolic controls on synthesis of phenolic acid amides 423

Fruit development 425

Ethylene: Multifunctional plant hormone 425

Biosynthesis of ethylene and its intermediates 427

Possible reciprocal relations of polyamines and ethylene 430

Polyamine-derived alkaloids 430

Nicotine and other putrescine-derived alkaloids 431

Cadaverine-derived alkaloids 434

**Chapter 21****Molecular Reactions at Cell Surfaces 443**

- Transglutaminase and polyamine participation 444
- Mechanism of transglutaminase reaction 445
  - Tying fibrin clots to cells 446
- Erythrocyte transglutaminase 447
- Transglutaminase of scavenging cells 447
- Membranous substrates 448
- Diversity of transglutaminase functions 448
- Unexpected "transglutaminases" of plant, microbial, and animal origin 451
  - Cross-linking and the  $\gamma$ -glutamyl amines 451
- Some cellular systems 452
  - Metastasis 452
  - Apoptosis and isopeptide bonds 453
  - Psoriasis 453
- Tissue or Type II transglutaminases 454
- Epidermal transglutaminase 455
- Matrix, membranes, and messages 456
  - Polyamine effects on intercellular reactions 456
- Reactions with erythrocyte membranes 458
- Receptors and cascades 459
  - Inositol derivatives and second messengers 459
  - Polyamines in activation and inhibition of PKC 461
- CKI and CKII 462
- Data on PTKs 464
- Tying inner structures to cell surface 465
- Transport in animal cells 467
- Mitochondria, spermine, and  $\text{Ca}^{2+}$  470
- Brief summary 472

**Chapter 22****Molecular Effects on Internal Cellular Polymers 481**

- Observations with protein enzymes 481
- Protein structure and folding 482
- Polyamines, protein isolation, and characterization 482
- Ryanodine receptor from skeletal muscle 482
- Activation of RNase A by covalently bound spermine 482
- Nuclease function and polyamines 483
- Two spermine-binding proteins 484
- Data on eucaryotic DNA polymerases 484
- Retroviral DNA-directed synthesis 485

- Additional remarks on DNA topoisomerases 485
- Eucaryotic nucleus 487
- Regulation of DNAases 487
- Chemical cleavage of DNA 488
- Polyamines and chromatin 489
- Metabolic modifications of chromatin 491
- Nucleolar activity 492
- Transcription and bacterial RNA polymerases (RPs) 493
- Phage-induced DNA-dependent RNA polymerases 493
- Eucaryotic DNA-dependent RNA polymerases 494
- Mitochondrial DNA-dependent RNA polymerases 495
- Polyamines and protein synthesis 495
- Ribosomal subunits and their association 495
- Polyamine-deficient ribosomes 496
- Additional phenomena of procaryotic protein synthesis 497
- Roles of  $\text{Mg}^{2+}$  and polyamines 498
- Free cations and toxicity of polyamine excess 499
- Aspects of eucaryotic protein synthesis 501
- Eucaryotic mRNA 502
- Unfolding of ribosomal subunits and ribosomal RNA 502
- Structure of ribosomal RNA and antibiotic sensitivities 503
- Polyamine-dependent ribosomal systems 504
- Assembly of ribosomal subunits 504
- Effects of  $\text{Mg}^{2+}$  and polyamines on polyribonucleotides 505

**Chapter 23****Molecular Effects on Internal Cellular Polymers: Transfer RNA and DNA 512**

- Polyamines and analysis of tRNA 512
- Chemical approaches to the nature of polyamine-binding sites in tRNA 513
- Quantitation of tRNA binding sites for polyamine 515
- Crystallographic analysis of tRNA 517
- NMR and binding to tRNA 518
- Modification of tRNA bases 520
- Methylation of tRNA 520
- Completing the acceptor stem of tRNA 521
- Catalytic RNA in tRNA processing and splicing 522

Synthesis of aminoacyl-tRNA	522	Formation and structure of Z-DNA containing polyamines	533
Misacylation	524	NMR studies of DNA in solution	536
Fidelity of translation at the ribosome	524	Molecular modeling and dynamics	537
Errors of processivity in translation	526	Structural distortions in DNA-drug interactions	537
Early studies of DNA-polyamine complexes	527	On the cutting edge	539
Crystals of polyamine phosphates and early models of DNA complexes	528		
Condensed DNA, compaction, and nonspecific cationic interaction	529	<b>Figure and Table Credits</b>	<b>545</b>
Flexibility of DNA structure	531		
Crystallization of B-DNA	532	<b>Index</b>	<b>555</b>
