Plant Protein-Serine/Threonine Kinases: Classification into Subfamilies and Overview of Function

D. G. HARDIE

I. Introduction	1
II. Classification of protein kinases	4
III. Functions of protein kinases in animals and fungi	5
A. Inputs.....	7
B. Outputs.....	8
IV. The calcium-dependent protein kinase (CDPK) subfamily	10
V. The SNF1-related protein kinase (SnRK) subfamily	13
VI. The receptor-like kinase (RLK) subfamily	18
VII. The MAP kinase (MAPK), MAP kinase kinase (MAPKK), and MAP kinase kinase kinase (MAPKKK) subfamilies	23
VIII. The cyclin-dependent kinase (CDK) subfamily	25
IX. The CK1 and CK2 (casein kinase) subfamilies	26
X. The GSK3/shaggy-related protein kinase (ASK) subfamily	28
XI. The CTR1/Raf-like subfamily	30
XII. The LAMMER subfamily	30
XIII. The PVPK1 subfamily	31
XIV. S6 kinase homologues	31
XV. NAK subfamily	32
XVI. Miscellaneous kinases	32
XVII. Conclusions and perspectives	33
Acknowledgements	33
References	33

Bioinformatics: Using Phylogenetics and Databases to Investigate Plant Protein Phosphorylation

E. R. INGHAM, T. P. HOLTSFORD and J. C. WALKER

I. Introduction: overview	45
II. Gene discovery and analysis	46
A. Sequence comparison	46
B. MAPKs: an example of phylogenetic analysis	54

III. Further analysis and considerations	55
A. Gene duplication	55
B. Domain swapping: genes with multiple origins	56
C. From function or pathway to gene	57
D. Examining domains	58
IV. Tools	59
A. Programs	59
B. Sources	61
V. The future	63
References	64

Protein Phosphatases: Structure, Regulation, and Function

SHENG LUAN

I. Overview	67
II. Structure and catalysis	69
A. Ser/Thr phosphatases	69
B. Protein-tyrosine phosphatases	76
III. Regulation of protein phosphatases	79
A. Regulated expression	79
B. Post-translational modification	81
C. Targeting domains	81
D. Regulatory subunits	82
E. Endogenous and exogenous inhibitors and activators	84
IV. Function of protein phosphatases	85
A. Ser/Thr protein phosphatases	86
B. Protein-tyrosine phosphatases	91
V. Future perspectives	94
Acknowledgements	95
References	95

Histidine Kinases and the Role of Two-Component Systems in Plants

G. ERIC SCHALLER

I. Introduction	109
II. Conceptual framework	111
A. Bacterial two-component systems	111
B. The yeast osmosensing system	114
III. Histidine kinases in plants	116
A. Involvement in ethylene responses	117
B. Involvement in cytokinin responses	125
C. Involvement in osmosensing	125
D. Pyruvate dehydrogenase kinases	126
E. Phytochromes	128
F. Other histidine kinases	130
IV. Response regulators in plants	130
A. Type-A response regulators	132
B. Type-B response regulators	134
C. Other response regulator-like proteins	135

V. Histidine-containing phosphotransfer proteins in plants.....	135
VI. Start making sense.....	137
A. Building a phosphorelay.....	137
B. Integration of signaling pathways.....	139
C. New methods from old modules.....	141
VII. Perspectives.....	142
Acknowledgements.....	143
References.....	143

Light and Protein Kinases

JOHN C. WATSON

I. Introduction.....	149
II. Effects of light on protein phosphorylation.....	151
III. Photoregulated protein kinase genes.....	153
IV. CK2 and light-regulated genes.....	157
V. Photoreceptor kinases and their relatives.....	157
VI. Phototropin (NPH1).....	162
A. Blue-light-induced phosphorylation.....	163
B. Structure and function of phototropin.....	165
C. Downstream of phototropin.....	167
VII. Phytochrome.....	169
A. Phytochrome is a phosphoprotein.....	169
B. Phytochrome is a protein kinase.....	169
C. Downstream of phytochrome.....	172
VIII. Conclusions.....	175
Acknowledgements.....	175
References.....	176

Calcium-Dependent Protein Kinases and their Relatives

ESTELLE M. HRABAK

I. Introduction.....	185
II. Calcium-dependent protein kinase activity in plants.....	188
III. CDPK genes and gene families.....	191
A. Structure of CDPKs.....	191
B. CDPK family members.....	201
IV. CRK genes and gene families.....	204
V. Regulation of expression of CDPK genes.....	207
A. Organ or tissue specific.....	207
B. Hormone inducible.....	209
C. Drought or salt stress inducible.....	209
D. Induction by other stimuli.....	210
VI. CDPK substrates.....	211
VII. Conclusions.....	214
Acknowledgements.....	215
References.....	215

Receptor-Like Kinases in Plant Development

KEIKO U. TORII and STEVEN E. CLARK

I. Introduction	226
II. Plant RLKs: classifications based on structural features	226
III. Receptor-like kinases regulating plant development	231
A. Erecta and the regulation of organ shape	231
B. Clavata and the maintenance of the shoot apical meristem	233
C. BRI1 and brassinosteroid signaling	235
D. CR4, RLK with a TNFR-like receptor domain, is required for specification of the epidermis	237
E. PRK1 and pollen development	238
IV. Receptor-like kinases possibly involved in development – implications from expression analysis	239
A. SERK and the embryogenic competence of somatic cells	239
B. LePRK1 and LePRK2, LRR-RLKs implicated in pollen–pistil interactions	240
C. RKF1, a flower-specific RLK	241
V. RLKs with response to environmental cues	241
A. RPK1 and osmotic stress	241
B. LRRPK and light regulation	242
VI. Structural/functional properties of plant RLKs	242
A. Protein kinase domain	242
B. Extracellular receptor domain	245
VII. <i>In vivo</i> mode of action of plant RLKs	248
VIII. RLK signaling	250
A. Downstream components	251
B. Ligands for RLKs	254
IX. Conclusions and perspectives	259
Acknowledgements	260
References	261

A Receptor Kinase and the Self-Incompatibility Response in *Brassica*

J. M. COCK

I. Introduction	270
II. Self-incompatibility in <i>Brassica</i>	270
A. A cell–cell interaction at the stigma surface	270
B. Genetic control of self-pollen rejection	272
C. Adapting SI for use as a breeding tool	273
III. The molecular mechanism of SI in <i>Brassica</i>	274
A. Chemical inhibitors and some clues about the mechanism of SI	274
B. Genes at the <i>S</i> locus: <i>SLG</i> and <i>SRK</i>	274
C. Stigmas express a complex mixture of <i>SRK</i> - and <i>SLG</i> -encoded proteins	275
D. <i>SLG</i> , <i>SRK</i> and recognition of self-pollen by the pistil	277
E. Investigation of <i>SRK</i> function at the molecular level: evidence for a receptor kinase complex <i>in vivo</i>	278
F. Polymorphism at the <i>S</i> locus and haplotype specificity	280

G. The male component of the self-incompatibility response	281
H. Putative downstream targets of signal transduction via SRK and their role in pollen rejection	283
IV. Evolutionary aspects	285
A. Evolution of SI systems in the angiosperms	285
B. Evolution of self-compatibility within the Brassicaceae	286
C. Balancing selection and trans-specific evolution of <i>S</i> -locus genes	286
D. Investigation of the origin of SI in <i>Brassica</i> : functional analysis of the <i>S</i> -gene family	287
E. <i>SRK</i> and the plant receptor-like kinase gene superfamily	289
V. Conclusion	290
Acknowledgements	292
References	292

Plant Mitogen-Activated Protein Kinase Signalling Pathways in the Limelight

S. JOUANNIC, A.-S. LEPRINCE, A. HAMAL, A. PICAUD, M. KREIS and Y. HENRY

I. Introduction	299
II. The mitogen-activated protein kinase module	301
A. The MAP kinase module	301
B. MAP kinase pathways from model organisms	304
C. Regulation through scaffolding, anchoring and adaptor proteins	311
III. What about MAP kinase module elements in plants?	313
A. Why study MAP kinase cascades in plants?	314
B. Plant MAP kinase cascade components	314
C. What about their biological function in plants?	321
IV. Conserved features of the MAP kinase module elements	329
A. A relationship- and evolutionary-based classification	329
B. The phosphorylation sites	335
V. Conclusion	339
Acknowledgements	341
References	341

Protein Phosphorylation and Dephosphorylation in Environmental Stress Responses in Plants

K. ICHIMURA, T. MIZOGUCHI, R. YOSHIDA, T. YUASA and K. SHINOZAKI

I. Introduction	355
II. Mechanical wounding and touch	356
A. Involvement of phosphorylation and dephosphorylation in gene expression responsive to mechanical wounding stress	356
B. Enzymatic activation of protein kinases by mechanical wounding	359
C. Enzymatic activation of protein kinases by mechanical perturbation (touch)	362

III. Pathogen infection and elicitors.....	362
A. Involvement of phosphorylation and dephosphorylation in gene expression responsive to pathogen infection and elicitor treatment ..	362
B. Enzymatic activation of protein kinases by pathogen infection and elicitors	363
IV. Low-temperature and osmotic stress	366
A. Involvement of phosphorylation and dephosphorylation in low-temperature and osmotic-stress-inducible gene expressions	366
B. Enzymatic activation of protein kinases by low-temperature and osmotic stress.....	367
V. Possible involvement of an <i>Arabidopsis</i> MAPK cascade in abiotic environmental stress signalling	367
VI. Conclusions and perspectives.....	369
References	370

Protein Kinases in the Plant Defense Response

GUIDO SESSA and GREGORY B. MARTIN

I. Plant defense mechanisms and reversible protein phosphorylation	379
A. Plant defense strategies.....	379
B. Protein phosphorylation and defense responses.....	381
II. Phosphorylation cascades mediated by plant resistance (<i>R</i>) genes.....	382
A. Resistance genes and protein phosphorylation	382
B. The Pto kinase and signal recognition	383
C. Pto downstream effectors: the Pti1 kinase and the transcription factors Pti4, Pti5 and Pti6	386
D. The rice Xa21 receptor-like kinase	389
E. Conservation of defense pathways in plants, mammals and insects ..	391
III. Receptor-like kinases related to defense responses.....	391
IV. MAP kinases and defense signal transduction	392
A. The elicitor-activated ERM kinase.....	393
B. Wounding-activated MAP kinases	394
C. The multi-stress-responsive SIP kinase.....	396
V. Perspectives	397
Acknowledgements	397
References	398

SNF1-Related Protein Kinases (SnRKs) – Regulators at the Heart of the Control of Carbon Metabolism and Partitioning

N. G. HALFORD, J.-P. BOULY and M. THOMAS

I. Introduction	405
II. The plant SNF1-related protein kinase (SnRK) gene family	406
A. The SnRK1 subfamily	406
B. The SnRK2 and SnRK3 subfamilies.....	412
III. Immunodetection of SnRKs and measurements of SnRK activity in crude extracts from plants.....	412
IV. Regulation of SnRK1 activity	414
V. Identification of SnRK1-interacting proteins	415
A. The SNF1 complex.....	415

B. The mammalian AMPK complex	416
C. Evidence for the existence of a SnRK1 complex	417
VI. Functions of SnRK1s	419
A. The yeast SnF1 system	420
B. The mammalian AMP-activated protein kinase system	420
C. Identification of substrates for SnRK1s	421
D. SnRK1s regulate gene expression	423
E. SnRK1s and sugar sensing in plant cells	425
F. Evidence that SnRK1s are a conduit for cross-talk between metabolic and cell cycle signalling	425
VII. Conclusion – SnRK1s are global regulators of carbon metabolism in plants and are at the heart of carbon partitioning	426
Acknowledgements	428
References	428

Carbon and Nitrogen Metabolism and Reversible Protein Phosphorylation

D. TOROSER and S. C. HUBER

I. Introduction	435
II. Target enzymes	436
A. Sucrose-phosphate synthase	436
B. HMG-CoA reductase	439
C. Nitrate reductase	441
D. Sucrose synthase	444
III. Regulation of protein kinase activity	447
A. Regulation of kinase activities by Ca^{2+} and second messengers	447
B. Phosphorylation cascades	448
C. Metabolite regulation of kinase activity	449
D. Regulation of kinase activities by protein factors	451
References	453

Protein Phosphorylation and Ion Transport: A Case Study in Guard Cells

JIA XU LI and SARAH M. ASSMANN

I. Protein phosphorylation	459
II. Involvement of protein phosphorylation in stomatal aperture change	461
A. Stomatal movement	461
B. Protein phosphorylation and stomatal aperture changes	464
III. Guard cell proteins modulated by phosphorylation	465
A. Introduction	465
B. Transport molecules	465
C. Non-transport molecules	469
IV. Protein kinases and phosphatases in guard cells	471
A. Protein kinases	471
B. Protein phosphatases	472
V. Conclusions and perspectives	473
Acknowledgements	474
References	474
