| Preface | xiii |
|---------|------|

## 1 Basic Principles of Chemical Kinetics

|  |    |
|--|----|
| 1.1 Order of a reaction                            | 1  |
| 1.1.1 Order and molecularity                       | 1  |
| 1.1.2 Determination of the order of a reaction     | 5  |
| 1.2 Dimensions of rate constants                   | 6  |
| 1.3 Reversible reactions                           | 7  |
| 1.4 Determination of first-order rate constants    | 9  |
| 1.5 The influence of temperature on rate constants | 11 |
| 1.5.1 The Arrhenius equation                       | 11 |
| 1.5.2 Elementary collision theory                  | 13 |
| 1.5.3 Transition-state theory                      | 14 |
| Problems   | 16 |

## 2 Introduction to Enzyme Kinetics

|  |    |
|--|----|
| 2.1 Early studies: the idea of an enzyme–substrate complex | 19 |
| 2.2 The Michaelis–Menten equation                          | 20 |
| 2.3 The steady state of an enzyme-catalysed reaction       | 23 |
| 2.3.1 The Briggs–Haldane treatment                         | 23 |
| 2.3.2 The Michaelis–Menten equation                        | 24 |
| 2.3.3 Units of enzyme activity                             | 25 |
| 2.3.4 The curve defined by the Michaelis–Menten equation   | 25 |
| 2.3.5 Ways of writing the Michaelis–Menten equation        | 27 |
| 2.4 Validity of the steady-state assumption                | 29 |
| 2.5 Graphs of the Michaelis–Menten equation                | 30 |
| 2.5.1 Plotting $v$ against $a$                             | 30 |
| 2.5.2 The double-reciprocal plot                           | 31 |
| 2.5.3 The plot of $a/v$ against $a$                        | 32 |
| 2.5.4 The plot of $v$ against $v/a$                        | 33 |

|       |  |    |
|-------|--|----|
| 2.5.5 | The direct linear plot                                   | 34 |
| 2.6   | The reversible Michaelis–Menten mechanism                | 37 |
| 2.6.1 | The reversible rate equation                             | 37 |
| 2.6.2 | The Haldane relationship                                 | 40 |
| 2.6.3 | “One-way enzymes”  | 41 |
| 2.7   | Product inhibition                                       | 43 |
| 2.8   | Integration of the Michaelis–Menten equation             | 44 |
| 2.9   | Artificial enzymes, RNA enzymes and catalytic antibodies | 47 |
| 2.9.1 | “Alternative enzymes”                                    | 47 |
| 2.9.2 | Artificial enzymes                                       | 49 |
| 2.9.3 | Catalytic RNA  | 50 |
| 2.9.4 | Catalytic antibodies                                     | 51 |
|       | Problems   | 51 |

### 3 Practical Aspects of Kinetic Studies

|       |   |    |
|-------|---|----|
| 3.1   | Enzyme assays                                     | 55 |
| 3.1.1 | Discontinuous and continuous assays               | 55 |
| 3.1.2 | Estimating the initial rate                       | 56 |
| 3.1.3 | Increasing the straightness of the progress curve | 57 |
| 3.1.4 | Coupled assays                                    | 58 |
| 3.2   | Detecting enzyme inactivation                     | 62 |
| 3.3   | Experimental design                               | 64 |
| 3.3.1 | Choice of substrate concentrations                | 64 |
| 3.3.2 | Choice of pH, temperature and other conditions    | 66 |
| 3.3.3 | Use of replicate observations                     | 67 |
| 3.4   | Treatment of ionic equilibria                     | 69 |
|       | Problems  | 72 |

### 4 How to Derive Steady-State Rate Equations

|     |   |    |
|-----|---|----|
| 4.1 | Introduction                              | 73 |
| 4.2 | The principle of the King–Altman method   | 74 |
| 4.3 | The method of King and Altman             | 77 |
| 4.4 | The method of Wong and Hanes              | 81 |
| 4.5 | Modifications to the King–Altman method   | 82 |
| 4.6 | Reactions containing steps at equilibrium | 85 |
| 4.7 | Analysing mechanisms by inspection        | 87 |

|       |  |    |
|-------|--|----|
| 4.7.1 | Topological reasoning                    | 87 |
| 4.7.2 | Mechanisms with alternative routes       | 87 |
| 4.7.3 | Dead-end steps                           | 88 |
| 4.8   | Derivation of rate equations by computer | 89 |
|       | Problems                                 | 91 |

## 5 Inhibition and Activation of Enzymes

|       |  |     |
|-------|--|-----|
| 5.1   | Reversible and irreversible inhibition                           | 93  |
| 5.1.1 | Catalytic poisons  | 93  |
| 5.1.2 | Analysis of the rate of inactivation                             | 93  |
| 5.1.3 | Types of reversible inhibition                                   | 94  |
| 5.2   | Linear inhibition  | 95  |
| 5.2.1 | Competitive inhibition (specific inhibition)                     | 95  |
| 5.2.2 | Mixed inhibition   | 98  |
| 5.2.3 | Uncompetitive inhibition (catalytic inhibition)                  | 100 |
| 5.2.4 | Summary of linear inhibition types                               | 101 |
| 5.3   | Plotting inhibition results                                      | 102 |
| 5.4   | Inhibition by a competing substrate                              | 105 |
| 5.4.1 | Enzyme specificity   | 105 |
| 5.4.2 | Testing if two reactions occur at the same site                  | 108 |
| 5.4.3 | Substrate protection experiments                                 | 111 |
| 5.5   | Enzyme activation  | 112 |
| 5.5.1 | Miscellaneous uses of the term <i>activation</i>                 | 112 |
| 5.5.2 | Specific activation  | 112 |
| 5.5.3 | Hyperbolic activation and inhibition                             | 115 |
| 5.6   | Design of inhibition experiments                                 | 116 |
| 5.7   | Inhibitory effects of substrates                                 | 118 |
| 5.7.1 | Non-productive binding   | 118 |
| 5.7.2 | Substrate inhibition   | 121 |
| 5.8   | Chemical modification as a means of identifying essential groups | 122 |
|       | Problems   | 124 |

## 6 Reactions of More than One Substrate

|     |                              |     |
|-----|------------------------------|-----|
| 6.1 | Introduction                 | 129 |
| 6.2 | Classification of mechanisms | 130 |

|       |   |     |
|-------|---|-----|
| 6.2.1 | Ternary-complex mechanisms                              | 130 |
| 6.2.2 | Substituted-enzyme mechanisms                           | 133 |
| 6.2.3 | Comparison between chemical and kinetic classifications | 134 |
| 6.3   | Rate equations  | 136 |
| 6.3.1 | Compulsory-order ternary-complex mechanism              | 136 |
| 6.3.2 | Random-order ternary-complex mechanism                  | 138 |
| 6.3.3 | Substituted-enzyme mechanism                            | 139 |
| 6.3.4 | Calculation of rate constants from kinetic parameters   | 140 |
| 6.4   | Initial-rate measurements in the absence of products    | 141 |
| 6.4.1 | Meanings of the parameters                              | 141 |
| 6.4.2 | Apparent Michaelis–Menten parameters                    | 143 |
| 6.4.3 | Primary plots for ternary-complex mechanisms            | 144 |
| 6.4.4 | Secondary plots   | 144 |
| 6.4.5 | Plots for the substituted-enzyme mechanism              | 146 |
| 6.5   | Substrate inhibition                                    | 147 |
| 6.5.1 | Why substrate inhibition occurs                         | 147 |
| 6.5.2 | Compulsory-order ternary-complex mechanism              | 148 |
| 6.5.3 | Random-order ternary-complex mechanism                  | 148 |
| 6.5.4 | Substituted-enzyme mechanism                            | 148 |
| 6.5.5 | Diagnostic value of substrate inhibition                | 149 |
| 6.6   | Product inhibition                                      | 150 |
| 6.7   | Design of experiments                                   | 153 |
| 6.8   | Reactions with three or more substrates                 | 153 |
|       | Problems  | 157 |

## 7 Use of Isotopes for Studying Enzyme Mechanisms

|       |   |     |
|-------|---|-----|
| 7.1   | Isotope exchange and isotope effects              | 159 |
| 7.2   | Principles of isotope exchange                    | 160 |
| 7.3   | Isotope exchange at equilibrium                   | 163 |
| 7.4   | Isotope exchange in substituted-enzyme mechanisms | 164 |
| 7.5   | Non-equilibrium isotope exchange                  | 165 |
| 7.5.1 | Chemiflux ratios                                  | 165 |
| 7.5.2 | Isomerase kinetics                                | 169 |
| 7.5.3 | Tracer perturbation                               | 171 |
| 7.6   | Theory of kinetic isotope effects                 | 172 |
| 7.6.1 | Primary isotope effects                           | 172 |
| 7.6.2 | Secondary isotope effects                         | 174 |

---

|       |  |     |
|-------|--|-----|
| 7.6.3 | Equilibrium isotope effects                | 175 |
| 7.7   | Primary isotope effects in enzyme kinetics | 175 |
|       | Problems                                   | 177 |

## 8 Environmental Effects on Enzymes

|       |   |     |
|-------|---|-----|
| 8.1   | pH and enzyme kinetics  | 179 |
| 8.2   | Acid–base properties of proteins  | 180 |
| 8.3   | Ionization of a dibasic acid  | 182 |
| 8.3.1 | Expression in terms of group dissociation constants                       | 182 |
| 8.3.2 | Molecular dissociation constants  | 183 |
| 8.3.3 | Bell-shaped curves  | 185 |
| 8.4   | Effect of pH on enzyme kinetic constants                                  | 187 |
| 8.4.1 | Underlying assumptions  | 187 |
| 8.4.2 | pH dependence of $V$ and $V/K_m$  | 188 |
| 8.4.3 | pH-independent parameters and their relationship to “apparent” parameters | 189 |
| 8.4.4 | pH dependence of $K_m$  | 190 |
| 8.4.5 | Experimental design   | 191 |
| 8.5   | Ionization of the substrate   | 192 |
| 8.6   | More complex pH effects   | 192 |
| 8.7   | Temperature dependence of enzyme-catalysed reactions                      | 193 |
| 8.7.1 | Temperature denaturation  | 193 |
| 8.7.2 | Temperature “optimum”   | 195 |
| 8.7.3 | Application of the Arrhenius equation to enzymes                          | 196 |
| 8.8   | Solvent isotope effects   | 197 |
|       | Problems  | 200 |

## 9 Control of Enzyme Activity

|       |  |     |
|-------|--|-----|
| 9.1   | Function of cooperative and allosteric interactions    | 203 |
| 9.1.1 | Futile cycles  | 203 |
| 9.1.2 | Inadequacy of Michaelis–Menten kinetics for regulation | 204 |
| 9.1.3 | Cooperativity  | 205 |
| 9.1.4 | Allosteric interactions                                | 205 |
| 9.2   | The development of models to explain cooperativity     | 207 |
| 9.2.1 | The Hill equation                                      | 207 |

|       |   |     |
|-------|---|-----|
| 9.2.2 | An alternative index of cooperativity                     | 209 |
| 9.2.3 | Assumption of equilibrium binding in cooperative kinetics | 209 |
| 9.2.4 | The Adair equation  | 211 |
| 9.2.5 | Mechanistic and operational definitions of cooperativity  | 214 |
| 9.3   | Analysis of binding experiments: the Scatchard plot       | 216 |
| 9.4   | Induced fit   | 220 |
| 9.5   | Modern models of cooperativity                            | 220 |
| 9.5.1 | The symmetry model of Monod, Wyman and Changeux           | 221 |
| 9.5.2 | The sequential model of Koshland, Némethy and Filmer      | 228 |
| 9.5.3 | Association–dissociation models                           | 234 |
| 9.6   | Kinetic cooperativity                                     | 234 |
|       | Problems  | 237 |

## 10 Kinetics of Multi-Enzyme Systems

|        |   |     |
|--------|---|-----|
| 10.1   | Enzymes in their physiological context  | 239 |
| 10.2   | Metabolic control analysis  | 240 |
| 10.3   | Elasticities  | 241 |
| 10.3.1 | Definition of elasticity  | 241 |
| 10.3.2 | Common properties of elasticities   | 245 |
| 10.3.3 | Enzyme kinetics viewed from control analysis                                    | 245 |
| 10.3.4 | Rates and concentrations as effects, not causes                                 | 247 |
| 10.4   | Control coefficients  | 249 |
| 10.5   | Summation relationships   | 251 |
| 10.6   | Relationships between elasticities and control coefficients                     | 253 |
| 10.6.1 | Connectivity properties   | 253 |
| 10.6.2 | Control coefficients in a three-step pathway                                    | 255 |
| 10.6.3 | Expression of summation and connectivity relationships in matrix form           | 257 |
| 10.6.4 | Connectivity relationship for a metabolite not involved in feedback             | 257 |
| 10.6.5 | The flux control coefficient of an enzyme for the flux through its own reaction | 258 |
| 10.7   | Response coefficients: the partitioned response                                 | 259 |
| 10.8   | Control and regulation  | 260 |

---

|        |  |     |
|--------|--|-----|
| 10.9   | Mechanisms of regulation               | 263 |
| 10.9.1 | Metabolite channelling                 | 264 |
| 10.9.2 | Interconvertible enzyme cascades       | 265 |
| 10.9.3 | The metabolic role of adenylate kinase | 267 |
|        | Problems                               | 269 |

## 11 Fast Reactions

|        |  |     |
|--------|--|-----|
| 11.1   | Limitations of steady-state measurements                 | 271 |
| 11.2   | Product release before completion of the catalytic cycle | 274 |
| 11.2.1 | “Burst” kinetics   | 274 |
| 11.2.2 | Active site titration                                    | 277 |
| 11.3   | Experimental techniques                                  | 277 |
| 11.3.1 | Classes of method  | 277 |
| 11.3.2 | Continuous flow  | 279 |
| 11.3.3 | Stopped flow   | 280 |
| 11.3.4 | Quenched flow  | 281 |
| 11.3.5 | Relaxation methods                                       | 283 |
| 11.4   | Transient-state kinetics                                 | 285 |
| 11.4.1 | Systems far from equilibrium                             | 285 |
| 11.4.2 | Simplification of complex mechanisms                     | 289 |
| 11.4.3 | Systems close to equilibrium                             | 292 |
|        | Problems   | 294 |

## 12 Estimation of Kinetic Constants

|        |   |     |
|--------|---|-----|
| 12.1   | The effect of experimental error on kinetic analysis                | 297 |
| 12.2   | Least-squares fit to the Michaelis–Menten equation                  | 300 |
| 12.2.1 | Introduction of error in the Michaelis–Menten equation              | 300 |
| 12.2.2 | Estimation of $V$ and $K_m$   | 301 |
| 12.2.3 | Corresponding results for a uniform standard deviation in the rates | 303 |
| 12.3   | Statistical aspects of the direct linear plot                       | 304 |
| 12.3.1 | Comparison between classical and distribution-free statistics       | 304 |
| 12.3.2 | Application to the direct linear plot                               | 306 |
| 12.3.3 | Lack of need for weighting  | 307 |

|        |   |     |
|--------|---|-----|
| 12.3.4 | Insensitivity to outliers                 | 308 |
| 12.3.5 | Handling of negative parameter estimates  | 308 |
