Preface	ix
---------------	----

1 Introduction: regulation and control

1.1 Regulation and control	1
1.2 Approaches to metabolic regulation	4
1.2.1 Molecular or reductionist explanations	5
1.2.2 Qualitative systems approach	6
1.2.3 Quantitative systems theory	7
1.3 An overview of mechanisms of regulation and control	8
1.4 Basic theory of metabolism	10
1.4.1 Metabolic steady states	10
1.4.2 Thermodynamics of metabolic pathways	12
1.4.3 Principles of regulation and control	17
1.5 Summary	20
1.6 Appendix: Free energy changes	21

2 Methods for studying metabolism and its regulation

2.1 Introduction	23
2.2 Experimental systems	23
2.2.1 Whole multicellular organisms	24
2.2.2 Isolated tissues and organs	25
2.2.3 Tissue slices	27
2.2.4 Isolated cells	27
2.2.5 Permeabilized cells	29
2.2.6 Cell-free systems	29
2.2.7 Isolated organelles	29
2.2.8 Isolated enzymes	30
2.3 Measurement of metabolites	30
2.3.1 Fixing concentrations	30
2.3.2 Low concentrations in complex mixtures	32
2.3.3 Compartmentation	34
2.3.4 Free and bound metabolites	36
2.4 Measurement of enzyme activity	37

2.4.1	Assay conditions	37
2.4.2	What to measure	38
2.4.3	Control of other factors affecting <i>in vivo</i> activity	38
2.5	Measurement of metabolic fluxes	39
2.6	Summary	43

3 Enzyme activity: the molecular basis for its regulation

3.1	Introduction	47
3.2	Michaelis–Menten kinetics	47
3.2.1	The measurement of K_m and V	50
3.2.2	Product inhibition	54
3.3	Two-substrate enzymes	56
3.3.1	Experimental investigation	60
3.3.2	Compulsory-order mechanism	62
3.3.3	Random-order mechanism	63
3.3.4	Double-displacement mechanism	64
3.4	Binding characteristics of enzyme sites	65
3.4.1	Identical independent binding sites	65
3.4.2	Non-identical independent sites	67
3.4.3	Identical interacting sites	68
3.5	Allosteric enzymes	70
3.5.1	The concerted model	72
3.5.2	The sequential model	76
3.5.3	Specific examples	78
3.6	Summary	81

4 Traditional approaches to metabolic regulation

4.1	The teleological approach	85
4.2	Non-equilibrium enzymes	86
4.3	Isotopic measurement of flux	88
4.4	Maximal enzyme activities	90
4.5	Addition of intermediates	92
4.6	The cross-over theorem	93
4.7	Enzyme properties	96
4.8	Metabolic mutants	97
4.9	Conclusion	97
4.10	Summary	98

5 Metabolic Control Analysis

5.1	The problems of the traditional approaches	101
5.2	Flux control coefficients	103
5.2.1	Definition	104
5.2.2	Interpretation	105
5.2.3	The summation theorem	110
5.3	Elasticities	111
5.3.1	Definition and examples	112
5.3.2	Use and interpretation	118
5.3.3	The connectivity theorem	119
5.4	Response coefficients	121
5.5	Control Analysis and traditional approaches	125
5.5.1	Displacement from equilibrium	126
5.5.2	Maximal enzyme activities	127
5.6	Summary	127
5.7	Appendix 1: More about flux control coefficients	128
5.8	Appendix 2: Concentration control coefficients	130
5.8.1	Theorems for concentration control coefficients	130
5.9	Appendix 3: More about elasticities	131
5.9.1	Elasticities and enzyme kinetics	131
5.9.2	Algebraic evaluation of elasticities	132

6 Measuring control coefficients

6.1	Manipulation of enzyme activity	136
6.1.1	Altering enzyme activity by genetic means	136
6.1.2	Natural alteration of expressed activity	147
6.1.3	Titration with purified enzyme	150
6.1.4	Titration of enzymes by specific inhibitors	151
6.2	Control coefficients from computer models	163
6.3	Control coefficients from elasticities	165
6.3.1	An experimental example	166
6.3.2	Experimental measurement <i>in vivo</i> by modulation	170
6.3.3	Experimental measurement <i>in vivo</i> : the 'top-down' approach	176
6.3.4	Calculation of elasticities	185
6.4	Summary	190
6.5	Appendix: Oxidative phosphorylation revision	191

7	Control structures in metabolism	
7.1	Supply and demand	197
7.2	Feedback inhibition	201
7.2.1	Discovery and relationship to allosteric enzymes	201
7.2.2	Feedback inhibition and Control Analysis	202
7.2.3	Patterns of feedback inhibition in branched pathways	206
7.3	Substrate or 'futile' cycles	213
7.3.1	Definition	213
7.3.2	Evidence for substrate cycling	216
7.3.3	Suggested functions	219
7.3.4	Thermogenesis	219
7.3.5	Sensitivity of control	220
7.3.6	Switching the direction of flux	223
7.3.7	Buffering metabolite concentrations	223
7.4	Regulation by covalent modification of enzymes	225
7.4.1	Irreversible and cyclic cascades	225
7.4.2	Types of reversible modification	227
7.4.3	Phosphorylation	228
7.4.4	Nucleotidylation	241
7.4.5	Properties of cyclic modification systems	243
7.5	Summary	252
7.6	Appendix I: Control Analysis of substrate cycles	252
8	Conclusion	
8.1	A new view of the physiological control of flux	257
8.1.1	Evidence for multisite modulation in cells	259
8.1.2	Implications of multisite modulation	267
8.2	Limitations of Control Analysis	268
8.2.1	Objections to Control Analysis	269
8.2.2	Extensions of Control Analysis	271
8.3	Applications of Metabolic Control Analysis	274
8.4	Summary	276
	References	279
	Index	287
