Preface	ix
Arthur W. Galston	
Acknowledgements	xi
1. Introduction	1
1.1. Plant membrane categories	1
1.2. The amphiphilic nature of biomembranes	2
1.3. Self-assembly to form a basic cell or organelle encasement	3
1.4. Liposomes	4
1.5. Layering of plant membranes	6
1.6. References and recommended reading	7
PART ONE	
<i>The building blocks of the membrane</i>	9
2. Membrane fatty acyl tailgroups	11
2.1. Glycerolipid fatty acyl chains	11
2.2. Sphingolipid fatty acyl chains	12
2.3. Some rules of membrane fatty acyl structure	13
2.4. Biochemical nomenclature of naturally occurring fatty acids	14
2.5. Differences between plants and mammals in membrane glycerolipid fatty acyl chain residues	20
2.6. <i>n</i> -3 and <i>n</i> -6 fatty acids in plant disease	24
2.7. References and recommended reading	25

3. Membrane glycerolipid and sphingolipid headgroups	27
3.1. Electroneutral phospholipids	28
3.2. The anionic phospholipids	29
3.3. The <i>lyso</i> -phospholipids	32
3.4. Phospholipid asymmetry and symmetry in membranes	34
3.5. The sphingolipids	40
3.6. Chloroplast-specific glycerolipids	45
3.7. Mitochondrial phospholipids	49
3.8. Platelet activating factor (PAF)	50
3.9. The tertiary structure of membrane glycerolipids	51
3.10. References and recommended reading	53
4. Sterols	57
4.1. Structure and function	57
4.2. Occurrence and distribution	59
4.3. Plant membrane sterols	60
4.4. Sterol esters and heart disease	61
4.5. Phospholipid/sterol ratio as a senescence index	62
4.6. References and recommended reading	63
5. Membrane proteins	65
5.1. The peripheral proteins	65
5.2. The integral proteins	66
5.3. Ca^{2+} mediated electrostatic bridging of complex integral proteins	70
5.4. Malonaldehyde-mediated cross-linking of membrane proteins	72
5.5. Proteolipids	74
5.6. Ionic channels	74
5.7. The possible structural and biophysical basis of ion channel specificity	76
5.8. Contentions against ion-channeling and pumping	83
5.9. Coated pits and coated vesicles	83
5.10. Plant hormone receptors	84
5.11. Lipid transfer proteins	91
5.12. The photosynthetic reaction center	94
5.13. References and recommended reading	97
6. Membrane water	103
6.1. Extra-membrane water	103
6.2. Vicinal or solvated water	104

6.3.	Bulk water	105
6.4.	Solute effects on the physical state of water	106
6.5.	Water channels (?) and movement across membranes	108
6.6.	References and recommended reading	110

PART TWO

<i>Biophysical aspects of membrane structure and function</i>	111
---	-----

7.	Plant membrane biophysics in development and senescence	113
7.1.	Membrane phases	113
7.2.	Membrane fluidity	125
7.3.	Surface tension parameters and membrane function	130
7.4.	Brownian and diffusional movements in membranes	143
7.5.	Piezobiophysics of the membrane	148
7.6.	References and recommended reading	150

PART THREE

<i>The membrane in action</i>	155
-------------------------------	-----

8.	The role of calcium in the membrane	157
8.1.	The chemistry of Ca^{2+}	157
8.2.	Structural and biophysical aspects of presence of Ca^{2+} in the membrane	159
8.3.	Membrane calcium distribution, gradients and interaction with calmodulin	160
8.4.	Applied and agricultural aspects of membrane Ca^{2+} metabolism	167
8.5.	Ca^{2+} and membrane fusion	169
8.6.	References and recommended reading	170
9.	Membrane-associated phospholytic and lipolytic enzymes	174
9.1.	Phospholipase A_1 (PLA_1)	175
9.2.	Phospholipase A_2 (PLA_2)	176
9.3.	Phospholipase B (PLB), lysophospholipase (LPL) and lipolyticacylhydrolase (LAH)	180
9.4.	Phospholipase C (PLC)	180
9.5.	Phospholipase D (PLD)	181
9.6.	Phosphatidate-phosphatase (PHP)	181

9.7. Lipoygenase (LOX)	182
9.8. Connection between protease and phospholipase activities	188
9.9. References and recommended reading	188
10. Response of plant membranes to chilling and freezing	192
R.L. Shewfelt	
10.1. Proposed mechanisms of plant cell response to low temperatures	192
10.2. Chilling injury	195
10.3. Freezing injury	202
10.4. Cold acclimation	209
10.5. A concluding perspective	214
10.6. References and recommended reading	216
11. The plasma membrane and tonoplast of guard cells	220
C.M. Willmer and O. Pantoja	
11.1. Introduction	220
11.2. Morphological changes of the plasma membrane and tonoplast during guard cell volume changes	220
11.3. Energization of the plasma membrane of guard cells	222
11.4. Ion transport by guard cells	227
11.5. Characteristics of the tonoplast and plasma membrane ATPases of guard cells	229
11.6. Aspects of signal perception and transduction by guard cells	233
11.7. References and recommended reading	235
12. Signal transduction, Ca^{2+} -triggered membrane glycerolipid turnover and growth/senescence equilibria	239
12.1. Overview	239
12.2. Detail	240
12.3. The phosphatidylinositol response	244
12.4. The phosphatidyl-linoleyl(enyl) cascade	249
12.5. References and recommended reading	251
Epilogue	255
Abbreviations	257
Index	261
