

Contents

<i>Preface</i>	vii
<i>Stereo Drawings</i>	ix
Chapter One — Reaction Mechanisms	1
Proton Transfer	1
Nucleophilic Substitution	6
Nucleophilic Addition to a Carbonyl	11
Acyl Exchange	17
Phosphoryl Exchange	24
Formal Hydride Transfer	27
One-Carbon Chemistry	30
Enolates, Enols, and Enamines	34
Dehydration-Hydration and Elimination-Addition	42
Electrophilic Aromatic Substitution	45
Concerted Reactions	46
Chapter Two — Coenzymes	53
Pyridoxal Phosphate	53
Thiamin Pyrophosphate	62
Biotin	69
Flavin	72
One-Electron Transfer	90
Transfer of Energy	108
Coenzymes of the Metabolism of Molecular Oxygen	110
Selenocysteine	131
Coenzyme B ₁₂	132
Chapter Three — Binding of Substrates to the Active Site	145
The Reaction or Reactions Catalyzed	146
Steady-State Kinetics	149
Binding	175
Nonideal, Superstoichiometric, and Substoichiometric Behavior	190
Contributions of Binding to Catalysis	199
Crystallographic Studies of Active Sites	214
Induced Fit	233
Association of Reactants and Dissociation of Products	237
Transfer of Substrates among Active Sites	243
Appendix: Molecularity and Approximation	251

Chapter Four — Transfer of Protons	257
General Acid Catalysis and General Base Catalysis	257
Enzymatic pH-Rate Profiles	271
Kinetic Isotope Effects	284
Stereochemistry	293
Modification and Labeling of the Active Site	314
Acid-Bases in Crystallographic Molecular Models	345
Metalloenzymes	350
 Chapter Five — Intermediates in Enzymatic Reactions	 373
Chemical Identification of Intermediates	375
Double Kinetic Isotope Effects	412
Isotopic Exchange	417
Flow Methods	437
 Chapter Six — Conformational Changes	 461
Allosteric Control of Enzymatic Reactions	465
Cooperativity	473
Conformational Changes and Oligomeric Associations	490
Rates of Conformational Changes	495
Crystallographic Studies of Conformational Changes	496
Systems for Pleiotropic Regulation	500
Conformational Conversion of Energy	507
 <i>Index</i>	 521
