Preface	V
List of contributors	XV
List of Abbreviations	XIX
1 The brain of the cell	1
<i>Friedrich Marks</i>	
1.1 Signals and symbols	1
1.2 Proteins as communicative molecules	2
1.3 The discovery of protein phosphorylation	7
1.4 Protein phosphorylation in prokaryotes	8
1.5 Protein phosphorylation in eukaryotes	12
1.5.1 Eukaryotic protein kinases: common features and diversities	12
1.5.2 Control of protein kinase activity.	15
1.5.3 The problem of substrate specificity.	17
1.5.4 Regulatory signals for protein kinases and examples of signaling cross talk	19
1.5.5 Protein tyrosine phosphorylation and the integrity of multicellular organisms.	23
1.6 Signal extinction by protein dephosphorylation.	26
1.7 Cancer: a cellular 'psychosis'	27
1.8 Advancing beyond the metaphor: proteins as non-trivial machines	28
References	31
2 cAMP-dependent protein kinase: structure, function and control	37
<i>Dirk Bossemeyer, Volker Kinzel and Jennifer Reed</i>	
2.1 Introduction	37
2.2 Biochemistry of cAPK	38
2.2.1 Principles of purification of cAPK.	38
2.2.2 The catalytic subunit (C-subunit).	39
2.2.3 Control of cAPK	42
2.3 Cellular aspects of cAPK function and control	49
2.3.1 <i>In vivo</i> control of cAPK	49
2.3.2 Cellular location of cAPK subunits	51
2.4 Structural aspects of cAPK function.	53
2.4.1 Dynamics of substrate-induced fit in solution	53
2.4.2 Crystal structure of cAPK C-subunit	54

2.4.3	Aspects of future research on cAPK.	66
2.5	A quick look at the cGMP-dependent protein kinase: a close relative of cAPK.	67
2.6	Structural consequences of protein phosphorylation in general	68
2.6.1	Immediate physical consequences	68
2.6.2	Conformational change – indirect evidence	68
2.6.3	Conformational change – direct evidence	69
2.6.4	Structural effects in peptides.	71
	References	74
3	Protein kinase C	81
	<i>Friedrich Marks and Michael Gschwendt</i>	
3.1	Introduction	81
3.2	The protein kinase C isoenzyme family.	82
3.2.1	The PKC subfamilies	82
3.2.2	PKC isoenzyme structures: common features and differences	83
3.2.3	Regulation of PKC activity.	85
3.3	Cellular functions of protein kinase C.	90
3.3.1	Activators and inhibitors as tools in PKC research	90
3.3.2	Phorbol ester effects.	91
3.3.3	Are effects of phorbol esters and DAG reliable indicators of PKC action?	93
3.3.4	Effects of altered PKC expression on cellular functions	94
3.3.5	PKC substrates	95
3.3.6	How PKC may acquire substrate specificity	100
3.4	Protein kinase C in disease.	101
3.4.1	Involvement of PKC expression in benign and malignant hyperproliferative diseases	102
3.4.2	Oncogenic and anti-oncogenic effects of protein kinase C expression	104
3.4.3	Protein kinase C and skin tumor promotion.	104
	References	109
4	Casein kinases	117
	<i>Walter Pyerin, Karin Ackermann and Peter Lorenz</i>	
4.1	The different classes of casein kinases	117
4.2	Protein kinase CK2	118
4.2.1	History	118
4.2.2	Biochemical features.	118
4.2.3	Molecular structures, interaction of subunits and regulation mechanisms	119
4.2.4	CK2 genes and their chromosomal locations	124
4.2.5	Transcribed CK2 messages and transcription control	127
4.2.6	Cell physiological roles of CK2	130
4.2.7	CK2 in mitogenic signal transmission	132
4.2.8	CK2 and the cell cycle.	135
4.3	Protein kinase CK1	141
4.3.1	Biochemical features and molecular structures of CK1	141

4.3.2	Substrates, cell physiological roles, subcellular location, and regulation of CK1.	142
	References	143
5	Ca²⁺/calmodulin-dependent protein kinase and neuronal function	149
	<i>Mark Mayford</i>	
5.1	Introduction	149
5.2	Biochemistry	150
5.2.1	Physical structure and distribution	150
5.2.2	Functional domains	151
5.2.3	Regulation of Ca ²⁺ -dependent activity	153
5.2.4	Cooperative effects in the holoenzyme	156
5.2.5	CaM kinase as a frequency detector and a memory molecule	157
5.3	Regulation of CaM kinase <i>in vivo</i>	159
5.4	CaM kinase substrate proteins	161
5.5	Presynaptic mechanisms	162
5.5.1	Neurotransmitter release and presynaptic facilitation	162
5.5.2	Serotonin and aggression	165
5.6	Postsynaptic regulation	166
5.6.1	Long-term potentiation, learning, and memory	166
5.6.2	Modification of glutamate receptors	168
5.7	The control of gene expression	170
5.7.1	Regulation of transcription via CREB	170
5.7.2	Regulation of transcription via C/EBP- β	172
5.8	Conclusion	173
	References	174
6	Cyclin-dependent protein kinases and the regulation of the eukaryotic cell cycle	179
	<i>Ingrid Hoffmann</i>	
6.1	Introduction	179
6.2	Phosphorylation sites on cdc2 kinase	180
6.2.1	Phosphorylation events inhibiting cdc2 kinase activity	182
6.2.2	Phosphorylation on Thr161 is required for activation of cdc2 kinase	183
6.3	Regulation of cdc2 phosphorylation	183
6.3.1	Cyclin	184
6.3.2	The cdk-activating kinase (CAK)	185
6.3.3	The protein kinases weel and mik1	186
6.3.4	The Thr14 kinase	188
6.3.5	The cdc25 protein phosphatase	188
6.4	Regulation of other cyclin-dependent kinases	191
6.5	Other regulators of cdks	194
6.6	Substrates of cyclin-dependent kinases	196
6.7	Conclusions	197
	References	197

7	Raf protein serine/threonine kinases	203
	<i>Ulrike Naumann, Angelika Hoffmeyer, Egbert Flory and Ulf R. Rapp</i>	
7.1	Introduction	203
7.2	Raf: its role in disease.	203
7.2.1	Overview	203
7.2.2	Raf in retroviruses	205
7.3	Gene structure	207
7.3.1	<i>C-raf</i> genes	207
7.3.2	<i>A-Raf</i>	209
7.3.3	<i>B-Raf</i>	210
7.3.4	<i>Raf</i> genes in invertebrates	210
7.3.5	<i>Raf</i> genes in plants	211
7.4	Chromosome mapping of Raf family proto-oncogenes	211
7.4.1	<i>C-raf-1</i>	211
7.4.2	<i>A-raf</i>	211
7.4.3	<i>B-raf</i>	212
7.5	Tissue distribution of Raf.	212
7.5.1	<i>C-raf-1</i>	212
7.5.2	<i>A-raf</i>	213
7.5.3	<i>B-raf</i>	213
7.6	Protein structure	213
7.7	Raf-1: role and function in signal transduction	216
7.7.1	Raf-1 and the cytoplasmic kinase cascade	216
7.7.2	Regulation of Raf function.	216
7.7.3	Downstream of Raf	220
7.8	Raf in the regulation of cellular processes	222
7.8.1	Proliferation and transformation	222
7.8.2	Cell differentiation and development	223
7.8.3	Proliferation versus apoptosis versus differentiation – the role of Raf in cell fate determination.	226
7.9	Future perspectives.	227
	References	228
8	Non-receptor protein tyrosine kinases	237
	<i>Geraldine M. Twamley and Sara A. Courtneidge</i>	
8.1	Introduction	237
8.2	The Src family	238
8.2.1	Evolution and history	238
8.2.2	Subclassification	239
8.2.3	Src structure	241
8.2.4	Src family regulation.	243
8.2.5	Substrates.	244
8.2.6	The members of the Src family	245
8.3	The Csk family	253
8.4	The JAK family.	253

8.5	The SYK family	255
8.6	The Btk family	255
8.7	The FAK family	256
8.8	The Abl family	257
8.9	The Fps family	257
8.10	Concluding remarks	258
	References	258
9	Receptor protein tyrosine kinases	265
	<i>Deborah L. Cadena and Gordon N. Gill</i>	
9.1	Introduction	265
9.2	Specific functions of receptor protein tyrosine kinases are provided by structural features	265
9.2.1	Ligand binding domains have evolved by combining various structural motifs	266
9.2.2	The tyrosine kinase domain is required to mediate biological responses	267
9.2.3	Subdomains of the intracellular domain regulate diverse biological functions	268
9.2.4	Separate membrane-bound ligand-binding subunits and soluble protein tyrosine kinases also mediate intracellular signaling	270
9.3	Receptor protein tyrosine kinases couple to signal transduction complexes	270
9.3.1	Receptor protein tyrosine kinases dimerize in response to ligand	271
9.3.2	Intracellular signaling is mediated through interactions with tyrosine phosphorylated proteins	271
9.4	Integrated responses to receptor protein tyrosine kinases	276
9.4.1	Receptor protein tyrosine kinases function in development	277
9.4.2	Inappropriate expression of receptor protein tyrosine kinase activity leads to diseases including cancer	279
9.5	Perspectives	280
	References	281
10	Hierarchal phosphorylation of proteins	285
	<i>Carol J. Fiol and Peter J. Roach</i>	
10.1	Introduction	285
10.2	Phosphorylation of glycogen synthase	287
10.3	Ordered versus hierarchal phosphorylation of proteins	288
10.4	Other examples of hierarchal phosphorylation	289
10.5	Molecular mechanisms	291
10.6	Structural elements in phosphoserine/phosphothreonine recognition	293
10.7	Hierarchal phosphorylation and the integration of cellular information	294
10.8	Conclusion	294
	References	295

11	Phosphorylation of transcription factors	297
	<i>Mathias Treier and Dirk Bohmann</i>	
11.1	Introduction	297
11.1.1	Eukaryotic transcription factors	298
11.1.2	General transcription factors	299
11.1.3	Promoter-selective transcription factors.	300
11.1.4	Biological role of transcription factors	302
11.2	The CREB family	303
11.2.1	cAMP-inducible transcription regulation by CREB	303
11.2.2	Integration of signals by CREB transcription factors	306
11.2.3	Antagonists of CREB: turning off the cAMP response	307
11.3	Jun	308
11.4	Serum response factor and ternary complex factors	313
11.4.1	Serum response factor.	314
11.4.2	Ternary complex factors; Elk-1 and SAP-1	315
11.5	STATs, JAKs and cytokine signaling	317
11.6	Concluding remarks	321
	References	323
12	Protein phosphatases	329
	<i>C. Van Hoof, J. Goris and W. Merlevede</i>	
12.1	Introduction	329
12.2	The protein serine/threonine phosphatases	330
12.2.1	General classification	330
12.2.2	Protein phosphatase type 1.	331
12.2.3	Protein phosphatase type 2A	334
12.2.4	Protein phosphatase type 2B	340
12.2.5	Protein phosphatase type 2C	341
12.2.6	Novel members of the protein serine/threonine phosphatase families	342
12.3	The protein tyrosine phosphatases	343
12.3.1	Receptor-like PTPases.	343
12.3.2	Cytosolic PTPases	346
12.4	The dual-specificity protein phosphatases	349
12.4.1	Protein tyrosine phosphatase displaying Ser/Thr phosphatase activity	349
12.4.2	PP2A, a Ser/Thr phosphatase displaying Protein tyrosine phosphatase activity.	351
12.4.3	Interaction of protein phosphatases with viral tumor antigens	355
12.5	Alkaline and acid phosphatases.	357
12.6	Protein histidine phosphatases	357
12.7	Historical events versus new perspectives	358
	References	358
