1. Assaying inositol phospholipid turnover in plant cells

1

Charles A. Brerley and David E. Hanke

1. Introduction	1
2. Structures of inositol phospholipids	1
Metabolic relations of inositol phospholipids	2
3. Experimental approaches to the study of turnover	5
Equilibrium labelling	8
Short-term (non-equilibrium) labelling strategies	8
4. Choice of experimental material	9
Whole plant/tissue	9
Suspension culture or protoplasts	10
Use of permeabilized cells	11
5. Extraction of inositol phospholipids from plant tissues	13
6. Identification of inositol phospholipids	16
HPLC analysis of phospholipid headgroups	17
7. Dissection of glycerophosphoinositol phosphates	24
Glycerophosphoinositol monophosphates (GroPInsPs)	24
Glycerophosphoinositol bisphosphates (GroPInsP ₂ s)	25
Acknowledgements	30
References	31

2. Measurement of inositol phosphate turnover in intact cells and cell-free systems

33

Stephen B. Shears

1. The assay of inositol phosphate accumulation by batch elution from anion-exchange columns as an index of the rate of PLC activity	33
Why this assay?	33
Labelling cells with [³ H]inositol	35
Use of lithium in PLC assays	36
The time course of PLC assays	38

Contents

The methodology for quenching intact cell incubations and extracting the soluble inositol phosphates	38
Assay for inositol phosphates using gravity-fed ion-exchange columns	40
Validating that this batch analysis is a reliable assay of PLC activity	41
2. Determination of levels of individual inositol polyphosphates in intact cells	42
Why use HPLC assays?	42
HPLC analysis of inositol phosphates	43
3. Analysis of the levels of 'inositol pyrophosphates' in intact cells	47
4. Analysis of inositol phosphate turnover in cell-free extracts	48
References	50
3. Mass assay of inositol and its use to assay inositol polyphosphates	53
<i>Tamas Balla</i>	
1. Extraction of inositol phosphates	55
2. Separation of inositol phosphates	57
3. Dephosphorylation of inositol phosphates	60
4. Assay to measure <i>myo</i> -inositol content	61
5. Accuracy of the InsP_6 measurement	64
6. Specificity of the assay	66
Summary	67
Acknowledgments	67
References	67
4. Expression, purification and interfacial kinetic analysis of phospholipase C-γ1	69
<i>Gwenith A. Jones and Debra A. Horstman</i>	
1. Introduction	69
2. Expression and purification of PLC- γ 1	69
Expression of PLC- γ 1 in insect cells	70
Purification of (His) ₆ -PLC- γ 1	71
Common problems encountered during purification	73
3. PLC- γ 1 assay	75
Interfacial kinetics	75
PLC assay	76

Contents

4. In vitro phosphorylation of PLC-γ1	81
Isolation of A-431 membranes and purification of EGF receptors	81
In vitro phosphorylation of (His) ₆ -PLC- γ 1	82
5. Conclusion	83
References	83
5. Baculovirus-promoted expression, purification, and functional assay of G-protein regulated PLC-β isoenzymes	85
<i>Andrew Paterson, Theresa M. Filtz and T. Kendall Harden</i>	
1. Introduction	85
2. Measurement of PLC-β-catalysed inositol lipid hydrolysis	86
Assay of PLC- β activity in the absence of G-protein subunits	86
Kinetic analyses of PLC- β	87
Functional reconstitution of PLC- β with G α_{11}	87
Other strategies for reconstitution of Gq α -subunits with PLC- β	89
Reconstitution of PLC- β with G-protein $\beta\gamma$ -subunits	90
3. Expression and purification of recombinant PLC-β isoenzymes	91
Growth and manipulation of Sf9 cells	91
Purification of recombinant PLC- β 1	93
Purification of other recombinant PLC- β isoenzymes	97
References	97
6. Purification and assay of PLC-δ	99
<i>Yoshimi Homma and Yasufumi Emori</i>	
1. Introduction	99
2. Purification of PLC-δ1 from rat brain	100
3. Production and purification of recombinant PLC-δ1 protein	103
Amplification of rat PLC- δ 1 cDNA by PCR	106
Construction of expression plasmid	107
Expression and purification of recombinant PLC- δ 1	111
4. Assay of PLC-δ1	113
Preparation of PtdIns(4,5)P ₂ substrate	113
Conventional assay for PtdIns(4,5)P ₂ hydrolysis	113
Reconstitution of PLC- δ 1 with p122	114
References	116

7. The purification and assay of inositide binding proteins	117
<i>Anne B. Theibert, Glenn D. Prestwich, Trevor R. Jackson, and Latanya P. Hammonds-Odie</i>	
1. Background	117
Ins(1,4,5)P ₃	118
Other InsPns: more second messengers?	118
Physiological roles of PtdInsPns	119
InsPn binding in membrane fractions	120
2. Identification	121
InsPn binding proteins	121
PtdInsPn binding proteins	124
Summary	125
3. Theoretical considerations	125
Receptors and binding proteins	125
Physiological levels of InsPns, and values for IC ₅₀ and K _d	127
4. Binding assays	128
Protocols for InsPn binding proteins	129
5. Purification of PtdInsPn/InsPn binding proteins	137
Heparin-agarose chromatography	137
InsPn affinity chromatography	139
6. Photoaffinity labelling	141
7. Identifying PtdInsPn binding proteins with InsPn ligands	143
Acknowledgements	144
References	144
8. Mass assay of inositol 1,4,5-trisphosphate and phosphatidylinositol 4,5-bisphosphate	151
<i>R. A. John Challiss</i>	
1. Introduction	151
2. Preparation of an Ins(1,4,5)P ₃ binding protein	152
3. Sample preparation for Ins(1,4,5)P ₃ mass assay	153
4. Mass determination of Ins(1,4,5)P ₃	155
5. Sample preparation and processing for determination of PtdIns(4,5)P ₂ mass	159
6. Conclusions	163
References	163

Contents

9. Desalting inositol polyphosphates by dialysis	165
<i>Jeroen van der Kaay and Peter J. M. van Haastert</i>	
1. Introduction	165
2. Dialysis	165
3. Dialysis of inositol polyphosphates	166
4. Examples	170
Acknowledgement	171
References	171
10. The $Ins(1,4,5)P_3$ receptor	173
<i>Katsuhiko Mikoshiba</i>	
1. Introduction	173
2. Purification of the $Ins(1,4,5)P_3$ receptor	174
Purification method (I)	175
Purification method (II)	177
Purification method (III)	178
3. Functional assay of $Ins(1,4,5)P_3$ receptor	180
Measurements of $Ins(1,4,5)P_3$ -induced Ca^{2+} release by the immunoaffinity-purified $Ins(1,4,5)P_3$ receptor	180
Removal of Ca^{2+} contamination	182
$Ins(1,4,5)P_3$ induced Ca^{2+} release measurements	183
4. Analysis of the $Ins(1,4,5)P_3$ receptor family	186
Preparation of type-specific antibodies against each type of the $Ins(1,4,5)P_3$ receptor	
Analysis of hetero-tetrameric structure of $Ins(1,4,5)P_3$ receptors	
Immunohistochemistry	
Acknowledgements	
References	
11. Purification and assay of inositol hexakisphosphate kinase and diphosphoinositol pentakisphosphate kinase	
<i>Susan M. Voglmaier, Michael E. Bembeneck, Adam I. Kaplin, György Dormán, John D. Olszewski, Glenn D. Prestwich, and Solomon H. Snyder</i>	

Contents

1. Introduction	195
2. Purification of $InsP_6$ kinase	196
Tissue source	196
Properties and stability	196
Purification	196
3. Polyethyleneimine-cellulose thin layer chromatography	198
Assay of $InsP_6$ and $PP-InsP_5$ kinase activities	198
Assay of $PP-InsP_5$ and $[PP]_2-InsP_4$ phosphatase activity	199
Assay of ATP synthase activity by $InsP_6$ kinase	200
References	200
12. Phosphoinositide 3-kinase	203
<i>Sebastian Pons, Deborah J. Burks, and Morris F. White</i>	
1. Introduction	203
2. Assays for PI3K activity	206
<i>In vivo</i> measurements	206
<i>In vitro</i> assays	209
3. Summary and perspectives	212
References	213
A1. List of suppliers	215
A2. List of suppliers of inositol derivatives	217
Index	227
B. Mass spectrometry of inositol 1,3,4,5-tetrakisphosphate and phosphatidylinositol 4,5-disphosphate	151
<i>R. A. John Chellis</i>	
1. Introduction	151
2. Preparation of a standard solution of inositol 1,3,4,5-tetrakisphosphate	151
3. Sample preparation for mass spectrometry	153
4. Mass detection of inositol 1,3,4,5-tetrakisphosphate and phosphatidylinositol 4,5-disphosphate	155
5. Sample preparation and processing for determination of inositol 1,3,4,5-tetrakisphosphate	159
6. Concluding remarks	163
