|---------------------------------------------------------------------------------------------------|-----|
| 1. <i>ORIGINS OF LIFE'S INGREDIENTS</i> .....                                                     | 1   |
| 1.1. The Setting .....                                                                            | 1   |
| 1.2. Prebiotic Syntheses (Stage I) .....                                                          | 7   |
| 1.3. Prebiotic Polymerization (Stage II) .....                                                    | 22  |
| 1.4. Summary .....                                                                                | 36  |
| 2. <i>THE PRECELLULAR, OR SIMPLE INTERACTING SYSTEMS, LEVEL (STAGE III)</i> .....                 | 39  |
| 2.1. Synthetic Models of Protobionts .....                                                        | 39  |
| 2.2. Autocatalysis .....                                                                          | 48  |
| 2.3. The Present Status of the Life Origins Problem—<br>A Critical Assessment .....               | 60  |
| 3. <i>THE GENETIC MECHANISM: I. DNA, NUCLEOIDS, AND CHROMATIN</i> .....                           | 65  |
| 3.1. Introduction .....                                                                           | 65  |
| 3.2. The Focal Ingredients .....                                                                  | 66  |
| 3.3. The Key Macromolecule .....                                                                  | 69  |
| 3.4. Replication of DNA .....                                                                     | 81  |
| 3.5. Chromatin and the Chromosome .....                                                           | 100 |
| 4. <i>THE GENETIC MECHANISM: II. THE CELL'S EMPLOYMENT OF DNA</i> .....                           | 121 |
| 4.1. The Types of Ribonucleic Acid .....                                                          | 121 |
| 4.2. Translation and Protein Synthesis .....                                                      | 160 |
| 5. <i>THE GENETIC MECHANISM: III. TRANSCRIPTION, PROCESSING, AND AN ANALYTICAL SYNOPSIS</i> ..... | 177 |
| 5.1. Transcription of the DNA Molecule .....                                                      | 177 |
| 5.2. An Alternative Protein-Synthesizing System .....                                             | 202 |
| 5.3. An Annotated Synopsis—Summary and Analysis .....                                             | 203 |

|                                                                  |     |
|------------------------------------------------------------------|-----|
| 6. MICROMOLECULAR EVOLUTION—THE ORIGIN OF THE GENETIC CODE ..... | 211 |
| 6.1. Conceptual Approaches .....                                 | 211 |
| 6.2. Mathematical Concepts .....                                 | 213 |
| 6.3. Biochemical Approaches .....                                | 214 |
| 6.4. A Biological Concept .....                                  | 216 |
| 7. THE TRANSFER RIBONUCLEIC ACIDS .....                          | 235 |
| 7.1. The Characteristic Molecular Features of tRNAs .....        | 235 |
| 7.2. Codon—Anticodon Interactions .....                          | 273 |
| 7.3. Summary of tRNA Structural Features .....                   | 291 |
| 8. REACTIVE SITES AND THE EVOLUTION OF TRANSFER RNAs .....       | 299 |
| 8.1. Reactive Sites of tRNAs .....                               | 299 |
| 8.2. Evolutionary Relations of tRNAs .....                       | 316 |
| 8.3. Origin and Evolution of tRNA .....                          | 344 |
| 9. THE GENETIC MECHANISM OF VIRUSES .....                        | 349 |
| DNA Viruses .....                                                | 350 |
| 9.1. Double-Stranded DNA Viruses .....                           | 350 |
| 9.2. Single-Stranded DNA Viruses .....                           | 379 |
| RNA Viruses .....                                                | 384 |
| 9.3. Single-Stranded RNA Viruses .....                           | 384 |
| 9.4. Double-Stranded RNA Viruses .....                           | 401 |
| Proteinaceous Viruses .....                                      | 402 |
| Summary and Conclusions .....                                    | 403 |
| 10. THE ORIGIN OF EARLY LIFE .....                               | 407 |
| 10.1. A Preliminary Definition of Life .....                     | 407 |
| 10.2. The Distinctive Characteristics of Viruses .....           | 409 |
| 10.3. Possible Steps in the Origins of Early Life .....          | 410 |
| REFERENCES .....                                                 | 429 |
| INDEX .....                                                      | 557 |
