Preface	vii
List of plates	xv
List of figures	xvii
List of tables	xxiii

CHAPTER

I	THE NATURE OF PLANT GROWTH AND ITS CONTROL	1
	The Factors Controlling Plant Growth	7
	Introduction	7
	Nutritional aspects	8
	Hormonal aspects	9
	Genetic aspects	12
	The Plant Growth Substances	13
	Nomenclature	19
II	THE NATURAL AUXINS	24
	Assay Methods	25
	(A) Coleoptile curvature tests	25
	(B) Other curvature tests with cylindrical organs	30
	(C) Segment straight-growth tests	31
	(D) Curvature tests with split organs	33
	✓(E) Root growth tests ✓	35 ✓
	(F) Epinasty tests	36
	(G) General considerations	36
	The Isolation and Chemical Identification of the Auxins	39
	(A) Early history	39
	(B) Techniques for extraction, purification and identification	40

	The Nature and Origins of the Natural Auxins	49
	(A) The mystery of auxins A and B	49
	(B) The occurrence and distribution of IAA	52
	(C) The origin of IAA from tryptophan: the occurrence of intermediate compounds	53
	(D) Other indole compounds	59
	(E) Non-indole auxins ✓	63 ✓
III	THE SYNTHETIC AUXINS	66
	The Structural Requirements for Auxins	66
	Effects of Variation in Structure on Auxin Activity	69
	(A) The nature of the ring	69
	(B) The nature, length, and position of the side-chain	72
	(C) The carboxyl group	79
	(D) Substitution in the nucleus	86
	(E) Stereo-considerations	89
	Theoretical Considerations of Structure/Activity Relationships	94
	✓ Auxin Synergists ✓	102 ✓
	General Considerations	103
IV	THE GIBBERELLINS	104
	The Original Isolation of the Gibberellins and their Establishment as Plant Hormones	104
	Bioassay Methods	108
	(A) Seedling tests	108
	(B) Leaf growth	111
	(C) Barley endosperm test	111
	(D) Leaf senescence test	112
	(E) Sugar-cane spindle bioassay	112
	Extraction and Purification	113
	Chemical Detection	114
	Structure and Occurrence	117
	Structure-Activity Relationships	119
	Gibberellin Biosynthesis	124
	Other Substances with Gibberellin-like Activities	128
V	THE CELL-DIVISION HORMONES	132
	Introduction	132
	The technique of tissue and organ culture	132
	Early studies on known cell division factors	133
	Cell Division Factors from Endosperm Tissue	137

	The Cytokinins	140
	The Biological Assay of the Cytokinins	140
	(A) Callus tissue growth	141
	(B) Bud formation	143
	(C) Leaf expansion	143
	(D) Leaf yellowing test (delay of senescence)	145
	(E) Betacyanin synthesis	145
	Extraction, Purification and Separation of Natural Cytokinins	146
	The Naturally-Occuring Cytokinins of Higher Plants	146
	Synthetic Cytokinins and Structure/Activity Relationships	149
	(A) 6-substituted aminopurines	149
	(B) Other adenine derivatives	151
	(C) Other purine derivatives	152
	(D) Closely-related non-purines	152
	(E) Compounds not related to purines	152
VI	NATURAL PLANT GROWTH INHIBITORS	155
	Introduction	155
	Growth Phenomena Involving Inhibitors	156
	(A) Germination	156
	(B) Dormancy of buds	162
	Isolation and Assay	166
	✓ Extension-Growth Inhibitors ✓	167 ✓
	✓ Germination Inhibitors ✓	170 ✓
	Dormancy Inhibitors	172
VII	✓ SYNTHETIC INHIBITORS OF GROWTH	178 ✓
	✓ Introduction	178 ✓
	✓ Antiauxins	179 ✓
	The Growth Suppressors	186
	(A) Maleic hydrazide	186
	(B) The growth retardants	189
VIII	✓ ETHYLENE	203 ✓
	Historical	203 ✓
	Is Ethylene a Natural Plant Regulator?	204 ✓
	The Effect of Ethylene on Auxin Physiology	210 ✓
	The Biogenesis of Ethylene	211 ✓
	Molecular Requirements for Ethylene-like Activity	212 ✓
	(2-Chloroethyl)phosphonic Acid (Ethrel, Ethephon)	212 ✓

IX	GROWTH SUBSTANCES IN THE SOIL	215
	Introduction	215
	The Biochemistry of Soil	216
	Growth Substances and Soil Micro-Organisms	218
	(A) Interactions between micro-organisms	218
	(B) Interactions between roots and micro-organisms	225
	Organic Substances Promoting Growth in Higher Plants	229
✓	Growth Substances and the Interaction between Plants in Natural Habitats—Allelopathy	232
✓	Inhibitors Involved in Allelopathy	240
	(A) Root exudates	240
	(B) Leaf leachates and decomposition products	241
	(C) Volatile toxicants	242
	(D) 'Sick soil' toxicants	243
X	HORMONES CONTROLLING REPRODUCTION	245
	THE FLOWERING PLANT	245
	Introduction	245
	The nature of the flowering process	246
	The Environmental Control of Flowering	247
	(A) Response to day-length	247
	(B) Response to temperature	249
	(C) The complexity of environmental control	251
	The Mechanism of Operation of the Stimulus	253
	(A) Photoperiodism	253
	(B) Vernalization	259
	Evidence for Specific Flowering Hormones	260
	(A) Evidence from photoperiodism	260
	(B) Evidence from vernalization	265
	Considerations of the Role of Known Hormones in Flowering Phenomena	265
	(A) The auxins and antiauxins: effects of application	266
	(B) Endogenous auxin changes associated with flowering processes	271
	(C) Gibberellins: effects of application	272
	(D) Gibberellins: endogenous changes associated with flowering	274
	(E) Other growth-regulating substances	280
	Attempts to Extract a Specific Flowering Hormone	285
	The Hormone Control of Sex Expression in Flowering Plants	287
	(A) Introduction	287

	(B) The effects of known hormones	289
	(C) The relationship of sex expression to endogenous hormone levels	292
	HORMONES AND SEXUALITY IN SIMPLE PLANTS	293
	The Fungi	294
	The Algae	298
	The Ferns	301
XI	THE CONTROL OF HORMONE LEVELS AT THE SITES OF THEIR ACTIONS	302
	Introduction	302
	The Relationship between Hormone concentrations and Growth Rates	303
	Control by Biosynthesis	308
	(A) Auxins	308
	(B) Gibberellins	312
	(C) The cytokinins	315
	Control by Transport	316
	(A) Introduction	316
	(B) The auxins	317
	(C) The gibberellins	330
	(D) Cytokinins	331
	(E) Abscisic acid	332
	Control by Inactivation	333
	(A) Auxins	333
	(B) Other hormones	344
XII	THE MECHANISMS OF HORMONE ACTION	346
	Introduction	346
	The Physiology of Cell Extension	347
	The Effects of Auxins of Cell Pressures	355
	Auxins and 'Active' Uptake of Material by the Cell	357
	Auxins and the Permeability of the Cell Membranes	359
	The Effects of Auxin on the Properties of the Cell-Wall	362
	Auxins and Cell-Wall Metabolism	369
	The Action of Hormones in Carbohydrate Metabolism	373
	✓ Auxin and Respiratory Processes ✓	375 ✓
	Theories Derived from Considerations of Structure-Activity Relationships in Hormone Molecules	379
	Mutual Interactions of Hormones and Interactions with Other Metabolites	379
	Hormones and the Control of Protein Synthesis	386

Effects of Hormones on Nucleic Acid Metabolism	389
(A) Levels	389
(B) Effects on transcription: the synthesis of RNA	390
(C) Hormones and DNA replication	396
(D) The molecular mechanisms of hormone action in nucleic acid and protein metabolism	398
Bibliography	403
Glossary	496
Conversion factors	503
Index	506
