Contents

Preface xii

I RNA as an Enzyme

1 Cleavage of RNA by RNAse P from *Escherichia coli*

Sidney Altman, Madeline Baer, Heidi Gold, Cecilia Guerrier-Takada, Leif Kirsebom, Nathan Lawrence, Nadya Lumelsky, and Agustin Vioque

I. Introduction 3
II. Aspects of the RNase P Reaction 4
III. Studies of Enzyme–Substrate Interactions 7
IV. Structure–Function Relationships in M1 RNA 9
V. Studies of the Protein Subunit of RNase P 11
VI. Hybrid Enzymes 14
VII. Conclusion 14
References 15

2 *Bacillus subtilis* RNase P

Norman R. Pace, Bryan D. James, Claudia Reich, David S. Waugh, Gary J. Olsen, and Terry L. Marsh

I. The RNase P Components 17
II. Mechanism of RNase P Cleavage 23
III. Toward the Higher-Order Structure of RNase P RNA 24
IV. Structure–Function Relationships in the RNase P RNA 32
V. Why Is the Catalytic Element of RNase P Composed of RNA? 35
References 36

Materiał chroniony prawem autorskim

3 Multiple Enzymatic Activities of an Intervening Sequence RNA from *Tetrahymena*

Thomas R. Cech, Arthur J. Zaug, and Michael D. Been

I. Introduction 37
II. Self-Splicing RNA 37
III. The IVS RNA Enzyme 39
References 43

4 Processing and Genetic Characterization of Self-Splicing RNAs of Bacteriophage T4

Marlene Belfort, Joan Pedersen-Lane, Karen Ehrenman, Dwight H. Hall, Christine M. Povinelli, Jonatha M. Gott, and David A. Shub

I. Introduction 45
II. Group I Splicing Mechanism for T4 *td* RNA 46
III. Nondirected Mutagenesis and Delineation of Two Functional Domains for Splicing in the *td* Intron 51
IV. Multiple Self-Splicing Introns in T4 57
V. Conclusions 63
References 64

II RNA Splicing

5 The Mammalian Pre-Messenger RNA Splicing Apparatus: A Ribosome in Pieces?

Joan A. Steitz

I. Introduction 69
II. The Discovery of snRNPs 70
III. The snRNPs-and-Splicing Hypothesis 73
IV. snRNP Components and Structure 73
V. Is Eukaryotic RNase P an Sm snRNP? 74
VI. U1 snRNPs Bind 5′ Splice Sites 75
VII. U2, U5, and U4/U6 snRNPs Also Participate in Splicing 75
VIII. The Spliceosome–Ribosome Analogy 77
References 79

6 Exon Sequences and Splice Site Proximity Play a Role in Splice Site Selection

Robin Reed and Tom Maniatis

I. Introduction 81
II. Exon Sequences and Splice Site Proximity Play a Role in Splice Site Selection 83
III. The Pattern of Splice Site Selection Is Altered in Different Extract Preparations and in Diluted Extracts 89
IV. Splice Site Selection Can Be Altered by Competition in Trans 90
V. Discussion 91
References 94

7 Factors That Influence Alternative Splice Site Selection *in Vitro*

James L. Manley, Jonathan C. S. Noble, Xin-Yuan Fu, and Hui Ge

I. Introduction 97
II. Materials and Methods 99
III. Results 99
IV. Discussion 108
References 111

8 Messenger RNA Splicing in Yeast

Arthur J. Lustig, Ren-Jang Lin, and John Abelson

I. An Overview of Nuclear mRNA Splicing 115
II. Preliminary *in Vitro* and *in Vivo* Characterization of Yeast mRNA Splicing 116
III. Characterization of Mutations in the Splicing Process 117
IV. The *RNA* Gene Products and the Spliceosome 124
V. Speculations 126
References 129

9 Architecture of Fungal Introns: Implications for Spliceosome Assembly

Roy Parker and Bruce Patterson

I. Introduction 133
II. Branch Site–3′ Splice Junction Relationship 135
III. Branch Site–5′ Splice Junction Relationship 142
IV. Perspectives 147
References 148

Material protegido por derechos de autor

10 RNA Joining and Trypanosome Gene Expression

Nina Agabian, Karen L. Perry, and William J. Murphy

I. Introduction 151
II. Materials and Methods 153
III. Results 155
IV. Discussion 167
V. Summary 169
References 169

III RNA Viruses

11 The Poliovirus Genome: A Unique RNA in Structure, Gene Organization, and Replication

Steven E. Pincus, Richard J. Kuhn, Chen-Fu Yang, Haruka Toyoda, Naokazu Takeda, and Eckard Wimmer

I. Introduction 175
II. Translation and Processing of the Polyprotein 178
III. RNA Replication 180
IV. Conclusions 204
References 204

12 Permanent Expression of Influenza Virus Genes Coding for Transcriptase Complexes: Complementation of Viral Mutants

Mark Krystal and Peter Palese

I. Establishment of a Functional Expression System 212
II. Addition of Nuclear Protein to the Transcription Complex 213
III. Conclusions and Outlook 215
References 216

13 Molecular Mechanisms of Pathogenesis by HTLV-III

Flossie Wong-Staal and Robert C. Gallo

Text 217
References 221

Material protegido por derechos de autor

IV RNA in DNA Replication

14 Changes in RNA Secondary Structure May Mediate the Regulation of IncFII Plasmid Gene Expression and DNA Replication

David D. Womble, Xinnian Dong, and Robert H. Rownd

I. Introduction 225
II. RNA Secondary Structure Predictions 229
III. Discussion 242
References 246

15 Regulation of ColE1 DNA Replication by Antisense RNA

Jun-Ichi Tomizawa

I. Introduction 249
II. RNA Primer Formation 249
III. Regulation of Primer Formation 251
IV. Binding of RNA I to RNA II 253
V. Importance of the Rate of Binding of RNA I to RNA II 255
VI. Secondary Structure of RNA II and Its Alteration by Binding of RNA I 255
VII. Conclusions 257
References 258

16 A Transfer RNA Implicated in DNA Replication

James R. Walker

I. Introduction 261
II. Expression of the *dnaY* Gene 261
III. Implication in DNA Replication 265
IV. Summary and Models for Replication Role 266
References 267

V RNA: Structure, Function, and Isolation

17 Stable Branched RNA Covalently Linked to the 5′ End of a Single-Stranded DNA of Myxobacteria

Sumiko Inouye, Teiichi Furuichi, Anil Dhundale, and Masayori Inouye

I. Introduction 271
II. DNA Structure of *Stigmatella aurantiaca* msDNA 273

Material protegido por derechos de autor

III. RNA Sequence of RNA-Linked msDNA 273
IV. Determination of the Linkage between RNA and msDNA ... 275
V. Gene Arrangement of the Coding Regions for msDNA (msd) and msdRNA (msr) on the Chromosome 280
VI. Biosynthesis of Branched RNA-Linked msDNA 281
VII. How Is Branched RNA-Linked msDNA Synthesized? 282
References 283

18 Recognition of RNA by Proteins

Olke C. Uhlenbeck, Huey-Nan Wu, and Jeffrey R. Sampson

I. A Simple RNA–Protein Interaction 285
II. A Complex RNA–Protein Interaction 290
References 293

19 A New Role for Transfer RNA: A Chloroplast Transfer RNA Is a Cofactor in the Conversion of Glutamate to Delta-Aminolevulinic Acid

Astrid Schön, Guido Krupp, Simon Gough, C. Gamini Kannangara, and Dieter Söll

I. Introduction 295
II. RNA^{Glu} Is a Unique Glutamine Accepting tRNA 298
III. RNA as a Cofactor: Possible Reaction Mechanism 300
IV. Outlook 300
References 302

20 Natural Suppressor Transfer RNA in Eukaryotes: Its Implication in the Evolution of the Genetic Code and Expression of Specific Genes

Yoshiyuki Kuchino, Hildburg Beier, Naohiro Hanyu, and Susumu Nishimura

I. Introduction 305
II. Isolation from *Tetrahymena* of the tRNA Gene and tRNA Corresponding to the Termination Codon UAA 307
III. Deviation of the Genetic Code of *Tetrahymena* from the Universal Genetic Code 309
IV. Evolution of Glutamine tRNAs Recognizing UAA and UAG Termination Codons in *Tetrahymena* 309
V. Isolation of a Natural UAG Suppressor Glutamine tRNA from Mouse Cells 313
VI. A Large Increase of $tRNA^{Gln}_{UAG}$ in Mouse Cells Infected with Mo-MuLV 317
VII. Concluding Remarks 317
References 319

Musikalienhandlung zur Geschichte der Musik

21 The Purification of Small RNAs by High-Performance Liquid Chromatography

Bernard S. Dudock

I. Introduction 321
II. Materials and Methods 322
III. Results 322
IV. Discussion 326
References 329

22 Comparative Studies on the Secondary Structure of the RNAs of Related RNA Coliphages

Ann B. Jacobson, Michael Zuker, and Akikazu Hirashima

I. Introduction 331
II. Results 332
III. Discussion 352
References 353

VI RNA in Regulation and Repression

23 Autogenous Regulation of Transcription of the *crp* Operon by a Divergent RNA Transcript

Keinosuke Okamoto and Martin Freundlich

I. Introduction 357
II. Activation of a Divergent Promoter by Cyclic AMP-CRP Is Required for *crp* Autoregulation 358
III. Autoregulation of *crp* Is Mediated by Divergent RNA 361
IV. A Model for *crp* Autoregulation 365
V. Conclusion 368
References 369

24 The Role of Translational Regulation in Growth Rate–Dependent and Stringent Control of the Synthesis of Ribosomal Proteins in *Escherichia coli*

J. R. Cole and M. Nomura

I. Secondary Structure of the L1 Target Site on L11 mRNA 372
II. Growth Rate–Dependent Control of Ribosomal Protein Synthesis 372

Material protegido por derechos de autor

III. Stringent Control of Ribosomal Protein Synthesis 375
IV. Concluding Remarks 377
References 378

25 Sequence and Structural Elements Associated with the Degradation of Apolipoprotein II Messenger RNA

Gregory S. Shelness, Roberta Binder, Sheng-Ping L. Hwang, Clinton MacDonald, David A. Gordon, and David L. Williams

I. Introduction 381
II. Effect of 5′ Noncoding Sequences on apo II mRNA Stability 383
III. Use of Enzymatic Probes and Reverse Transcriptase to Analyze apo II mRNA Secondary Structure 384
IV. Analysis of apo II mRNA in Polysomes 392
V. Summary and Perspective 397
References 398

26 A New Immune System against Viral Infection Using Antisense RNA: micRNA-Immune System

Akikazu Hirashima, Masatoshi Takahashi, and Masayori Inouye

I. Introduction 401
II. micRNA Mutagenesis 403
III. micRNA-Immune System 404
IV. Conclusion 409
References 411

27 Regulation of IS*10* Transposase Expression by RNA/RNA Pairing

N. Kleckner, J. D. Kittle, and R. W. Simons

I. Introduction 413
II. Biological Role of Multicopy Inhibition 415
III. Molecular Mechanism of Multicopy Inhibition 415
IV. Mechanism of Pairing between RNA-IN and RNA-OUT *in Vitro* 416
V. *In Vivo* Phenotypes of Mutations in RNA-OUT 420
References 421

Material protegido por derechos de autor

28 Characterization and Functional Analysis of the Factors Required for Transcription of the Adenovirus Major Late Promoter

Danny Reinberg, Osvaldo Flores, and Leonard Buckbinder

I. Introduction 423
II. Fractionation and Functional Analysis of the Factors Required for Transcription of the Adenovirus Major Late Promoter 424
III. Concluding Remarks 437
References 439
