

# Contents

<i>Preface</i>	v
<b>Chapter 1 Fundamental Concepts</b>	<b>1</b>
Development of Constitutive Equations	1
Classification of Non-Newtonian Behavior through Flow Curves	6
Constitutive Equations for Pseudoplasticity	11
Basis for Determining Rheological Flow Properties	14
Notation	17
References	19
<b>Chapter 2 Viscometric Techniques</b>	<b>20</b>
Analysis of Capillary Flow	20
Capillary Viscometry	25
Concentric Cylinder Rotatory and Rotating Cylinder Viscometers	34
Cone-and-Plate Viscometer	39
Sandwich Viscometer	40
Parallel-Disk Viscometer	41
Slit Rheometer	43
Melt Flow Indexer	44
Elongational Flow Devices	44
Stress Relaxation and Small Strain Measurements	46

Flow Birefringence Measurements	50
Swell and Shrinkage Tests	51
Viscometric Techniques for Different Industries	53
Notation	72
References	73
<b>Chapter 3 Mixing Practices</b>	<b>75</b>
Introduction	75
General Comments on Non-Newtonian Behavior	76
General Methods of Mixing	85
Estimating Power Consumption	86
Heat Transfer	94
Mass Transfer	103
Circulation Capacity, Circulation Time, and Mixing Time	105
Blade Mixers	107
Banbury Mixers	119
Mixing Rolls	134
Ribbon Blenders and Planetary Mixers	152
Emulsifiers and Blenders	166
Notation	175
References	176
<b>Chapter 4 Application of Screw Mixers</b>	<b>178</b>
Operating Principles and General Characteristics	178
Parametric Calculations	182
Single-Screw Mixer Modeling	215
Twin-Screw Mixer Modeling	216
Modeling of Universal Oscillating Screw Mixers	219
Dispersion-Type Screw Mixers	226
Design of Centrifugal Mixers	231
Disk Mixers	233
Notation	246
References	247
<b>Chapter 5 Rubber Compounding Practices</b>	<b>249</b>
Uses and Properties of Carbon Black	249
Reinforcement of Elastomers	255
Carbon Black Mixing	263
Latex and Solution Masterbatching	280
Test Methods for Evaluating Carbon Black Dispersion	281

<b>Contents</b>	<b>ix</b>
Notation	300
References	301
<b>Chapter 6 Extrusion of Elastomers and Plastics</b>	<b>302</b>
Introduction	302
Single-Screw Extrusion	304
Influence of Rheology on Extrusion	316
Extrusion of Ethylene–Propylene Elastomers	325
Twin-Screw Extrusion	354
Counterrotating, Tangential Twin-Screw Extruders	371
Notation	378
References	380
<b>Chapter 7 Laboratory Techniques for Processability Testing</b>	<b>382</b>
Introduction	382
Principles of Rheology and Processing	384
Differential Scanning Calorimetry and Processability Testing	395
Importance of Molecular Properties and Vulcanizate Properties	408
Application of Torque Rheometry	415
Notation	432
References	433
<i>Index</i>	435
