Foreword 17

Part one:

HUMAN NUTRITION

Nutritional needs 23

Problems of methodology

Assessment of nutritional needs

Recommended quantities

Protein deficiency and malnutrition 37

Undernutrition or nutritional marasmus

Protein malnutrition and vitamin deficiency

Groups at risk

Number of people suffering from undernutrition and malnutrition

Malnutrition and brain development

Experimental research

Effects on protein synthesis in nerve cells

Role of the thyroid hormones

Observations in humans

Malnutrition and ecology

Nutrition and infection 61

Effects of infection and parasitic diseases on nutrition

Helminthiasis

Malnutrition and infection

Conclusion

Children's diet 73

Composition of milk and lactogenesis

General composition

Composition of cow's milk

Lactogenesis

Milks and bottle feeding

Special milks

Bottle feeding

Advantages of breastfeeding

Prevention of nutritional marasmus, infections and infant obesity

Colonization of the digestive tract by microflora

Contraceptive effect

Economic advantages

Conclusion

Effects of substances absorbed by the mother

Weaning foods

Changes in diet and attitudes towards food 95

Changes in diet in industrialized countries

Underfeeding and poverty

Consumption of vegetable fibre

Consumption of sweeteners

Range of sweeteners and their uses

Thaumatococcus and other natural sweeteners of plant origin

Saccharin and cyclamates

Aspartam and acesulfame-K

Tea consumption

Coffee consumption

Increase in alcohol consumption

Alcohol consumption in Europe

Alcohol consumption and social change

Changes in eating habits

Fast food

Attempts to modify eating habits

Slimming foods

Children's attitudes to food

Variety and quality of foodstuffs

Improvement of food products

Baking and biscuit manufacture

Pastas

Wines and products made from grapes

Food and agriculture industries, biotechnologies and pharmaceuticals

Prospects

Diet and health 159

Obesity

Definition

Obesity and diet

Etiology

Treatment

Sugars and health

Sucrose substitution

Isoglucose or fructose syrups

Isomaltulose

Conclusion

Assimilation of carbohydrates

Alcoholism: consequences and prevention

Alcohol consumption and alcoholism

Alcoholism and accidents

Restriction of alcohol consumption

Detoxification of alcoholics

Alcoholism detection tests

Nutritional pathology

Cholesterol and cardio-vascular diseases

Dietary recommendations

Food contamination

Toxic substances

Incidence of the use of antibiotics in the feeding of domestic animals

Nitrogen compounds and health hazards

Nitrogen oxides

Nitrates and nitrites

Nitrosamines

Food and cancer

Effects of foods on human behaviour

Part two:

PRODUCTION AND TRADE IN AGRICULTURAL FOODSTUFFS

Problems of evaluation and diagnosis 207

Changes in food production 209

Overall global changes

Variations in production between 1960 and 1989

Shortage and surplus

Factors affecting food production patterns 217

- Social and economic factors
- Extension of land under cultivation, irrigation, increase in yield
- Energy supplies and costs
 - Changes in oil prices and output
 - Changes in prices and output of natural gas
- Implications
- Forecasts
- Conclusion

Effects of climatic variation on production 235

- Hazards of food production and causes of famine
- Climate, drought and desertification
 - Definitions
 - Rainfall patterns in arid and semi-arid regions
 - Causes and aggravating factors of drought
- Other recent climatic changes
- Vulnerability of crops to variations in weather conditions
- Drought, desertification and famine in sub-Saharan Africa
 - Drought of 1968-1973
 - Drought of 1982-1984
 - West Africa
 - East Africa
 - Southern Africa
- Conclusion
- Other droughts and famines
- International economic system and food shortages
- Combating desertification, drought and famine

General measures

- The case of the Sahel
 - Main climatic, agricultural and demographic features
 - Changes in population, climate and food needs
 - Combating desertification and increasing agricultural output
- Anti-drought measures and agro-meteorology
 - Rain-making
 - Harvesting run-off
 - Anti-drought measures and the role of agro-meteorology

Regional and national situations 283

- Place of the developing countries in the world economy
- Developing countries and debt
- Africa
 - General economic situation
 - Population
 - Agricultural production and food supply
 - Constraints on agro-pastoral development
 - An example of agricultural development and self-sufficiency in food: Cameroon
 - Prospects
- North Africa and the Middle East
 - Algeria
 - Near and Middle East
 - Saudi Arabia
 - Israel
- Asia
 - Population
 - General economic situation; agricultural production
 - Bangladesh
 - India

Viet Nam	Cereals and oil-seeds
China	Beef
Improvements in diet	Dairy products
Food production	Alternative uses for surplus grain
General economic situation	
Reform of policies on production and distribution of foodstuffs	
Rural economy and the new industrial policy	
Continuation of economic reforms	
Prospects	
Japan	
Latin America and the Caribbean	Modalities of production, acquisition and use of agricultural commodities in the developing countries 393
General economic situation	Commercial or export crops and food crops
Foreign debt	Locally produced cereals and imports
Food production	Exports of agricultural commodities and coverage of food requirements
Brazil	Coffee
Union of Soviet Socialist Republics	Cocoa
Food production	Tea
Food imports	Sugar
Reforms and outlook	Tobacco
United States of America	Cotton
Cultivated area; agricultural production and productivity	Diversification of agricultural production
Number and size of farms	Diet and the money economy
Farms incomes and debts	Food supply and real purchasing power
Assistance measures and agricultural policy	Food supply and urbanization
Agricultural surpluses and exports	Choice of diet
Prospects	
European Economic Community	International trade in agricultural commodities 423
Food production	Trends in international trade
Cattle stocks and meat production	Cereals
Milk production	Soybeans, oil and proteinaceous seeds
Farm income	Animal feed
France	Human diet
Federal Republic of Germany	Growth of demand for proteins and of soybean production
United Kingdom	International trade
Agricultural surpluses and exports	Reducing dependence on soybeans
Common Agricultural Policy	Expansion of soybean cultivation
	Increase in rapeseed production

Increase in sunflower production	
Proteinaceous plants	
Feed supplements	
Other means	
Conclusion	
Trade disputes between the United States of America and the European Economic Community	

Part three:

**ACHIEVEMENTS AND POTENTIAL;
INTERNATIONAL CO-OPERATION
AND PROSPECTS**

Hunger and poverty 449

Requirements for rural development 455

Increase in agricultural production and industrialization	
Rural development and overall development	
Factors limiting agricultural development	
Prerequisites for faster agricultural development	
Agrarian reform	
Price of agricultural commodities and investments	
Bringing new land into cultivation and more intensive agriculture	
Agricultural extension work	
Stages of agricultural development	

The "green revolution" 465

Empirical crop selection	
Cross pollination or hybridization	

Genetic diversity and importance of land races; recurrent breeding	
--	--

Dwarf varieties

Wheat

First breeding work	
Dissemination of new varieties	

Rice

First breeding work	
Breeding and dissemination of new varieties	

Maize

Origin of maize	
Empirical selection and breeding	
Hybrid varieties	
Breeding high-yielding varieties	
Future prospects of breeding schemes	

Sorghum

Breeding new varieties	
Sorghum utilization in foodstuffs	

Millets

Triticale

Breeding new varieties	
Triticale utilization in foodstuffs	

Food legumes

Pigeon-pea	
Cowpea	
Chick-pea, lentil and broad bean	
Field bean	
Groundnut and bean	
Soybeans	

Cassava

Breeding new varieties	
Utilization in foodstuffs; retting and fermentation processes	

Other tropical root crops

Breeding varieties better adapted to their environment	
--	--

Varieties withstanding water stress	
Varieties adapted to particular soil conditions	

- Integration of agriculture and livestock husbandry
- Impact of the "green revolution"
 - Stages of technology transfer
 - Acceptance of the new varieties
 - Increase of agricultural production
- Social and economic impact
 - Labour, employment and mechanization
 - Social impact
- Conclusions and prospects
 - Lessons from the "green revolution"
 - New endeavours
 - Conclusions

Agriculture, agroforestry and livestock husbandry: international agricultural research centres, regional and international co-operation, transfer of results 533

- International Agricultural Research Centres
 - Status, funding and allocation of budget resources
 - Overall and regional policies
 - New trends and approaches
 - International Rice Research Institute
 - Centro Internacional de Mejoramiento de Maíz y Trigo
 - Centro Internacional de Agricultura Tropical
 - International Institute of Tropical Agriculture
 - Centro Internacional de la Papa
 - Species diversity and extension of potato cultivation
 - Early breeding work
 - Interspecific hybridization
 - Clonal sanitary selection
 - In-vitro* micropopagation
 - Tissue and protoplast culture,

- somaclonal variation and creation of new varieties
- Haplodiploidization
- Genetic engineering
- Collections of the Centro Internacional de la Papa
- CIP evaluation and breeding activities
- Other international and regional centres
- Agroforestry
 - Shifting cultivation and combined production systems
 - Agroforestry systems
 - Agrisylviculture
 - Community or social agroforestry
 - Utilization of leguminous tree species
 - Economic analysis of agroforestry systems
- Transfer of research results
 - Examples of preservation of agricultural products
 - Nature and importance of post-harvest losses
 - Drying, storage and milling of grains
 - Drying and conservation of vegetables and fruits
 - Examples of processing of foodstuffs

Conservation and utilization of plant genetic resources 607

- Usefulness of biological diversity
- Drawbacks of limited genetic diversity of crops
- Utilization of plant genetic resources
- Conservation of plant genetic resources
- Development of seed and gene banks
- Modes of operation of gene banks
- Germplasm collections of the main crop species

Gene banks and breeding

Rice

Wheat and other cereals

Selection of resistant varieties

Tree species

Germplasm appropriation and privatization
of research on crop improvement

Patents and plant breeders' rights

Plant breeders' rights: recent
developments

Privatization of production of improved
seeds

Impact on developing countries; plant
breeders' rights and farmers' rights

Search for an international agreement on
the conservation and utilization of plant
genetic resources

International assistance and co- operation 671

International aid to development

Food aid

Form and amount of food aid

Criticisms of food aid

Search for more appropriate strategies

Bilateral and multilateral assistance

New approaches to assistance and
co-operation for development

Role of non-governmental organizations

World Bank

Food and Agriculture Organization of the
United Nations

World Food Conference (1974)

World Food Security Compact

The World Food Programme

World Food Council

International Fund for Agricultural
Development

United Nations Children's Fund

Prospects 697

Population, agricultural production, food
needs and demand

Review of the 1980s

Changes in supply and demand for cereals

Forecasts of population increase

Forecasts of agricultural and food
production

Prospective studies by the FAO

Conclusions

Maximum yields and expected output

Climatic variations and agriculture

Changes in the Earth's climate and in
carbon dioxide levels

Increase in carbon dioxide in the
atmosphere: observations and forecasts

Warming up of the climate

Consequences of the warming up

Effects on climate

Effects on agriculture

Other effects

Proposed action

Protection of the environment

Technical innovations and their foreseeable
effects

Areas of technical innovation

Animal husbandry

Herd productivity and management

Reproduction

Disease prevention

Another "green revolution"

Plant cell, tissue and organ cultures;
gene transfer

Increasing the efficiency of

photosynthesis

Greenhouse cultivation and

hydroponics

Computerized agriculture and systems
of integrated pest control
Conclusions

Epilogue 761

Bibliography 765

Part one: Human nutrition

Part two: Production and trade in
agricultural foodstuffs

Part three: Achievements and potential;
international co-operation and prospects
