

CONTENTS

<i>Preface</i>	vii
J. F. V. VINCENT AND J. D. CURREY	
Biomechanics: the last stronghold of vitalism	1
J. E. GORDON	
Fracture	13
E. H. ANDREWS	
The mechanical behaviour of composite materials	37
B. HARRIS	
Mechanical properties of mollusc shell	75
J. D. CURREY	
Some mechanical and physical properties of teeth	99
N. E. WATERS	
The structure and biomechanics of bone	137
J. L. KATZ	
Wood, one of nature's challenging composites	169
G. JERONIMIDIS	
Insect cuticle: a paradigm for natural composites	183
J. F. V. VINCENT	
Molecular structure and mechanical properties of keratins	211
R. D. B. FRASER AND T. P. MACRAE	
Silks – their properties and functions	247
M. DENNY	
Theories of rubber-like elasticity and the behaviour of filled rubber	273
L. MULLINS	
The theory of viscoelasticity in biomaterials	289
K. L. DORRINGTON	

The mechanical properties of plant cell walls	315
D. B. SELLEN	
The elastic properties of rubber-like proteins and highly extensible tissues	331
J. M. GOSLINE	
The viscoelasticity of mucus: a molecular model	359
R. H. PAIN	
Articular cartilage	377
S. A. V. SWANSON	
Deformation in tendon cartilage	397
J. KASTELIC AND E. BAER	
Adaptive materials: a view from the organism	437
S. A. WAINWRIGHT	
Posters displayed at the Symposium (4–6 September 1979)	455
<i>Author Index</i>	491
<i>Subject Index</i>	501
