Section I Somaclonal Variation; Chromosomal, Genetical and Molecular Variability; Gene Amplification; Mosaics and Chimeras; Variability for Tolerance to Salinity and Nematodes

I. 1 Somaclonal Variation – Origin, Induction, Cryopreservation, and Implications in Plant Breeding

Y.P.S. BAJAJ (With 16 Figures)

1	Introduction	3
✓ 2	Origin and Molecular Basis of Variation	6
3	Induction of Variability	8
4	Somaclonal Variation in Various Crops	21
5	Cryopreservation of Somaclones	31
6	Implications in Plant Breeding	32
	References	35

I. 2 Chromosome Variation in Plant Tissue Culture

H. OGURA (With 4 Figures)

1	Introduction	49
2	Chromosome Constitution of Callus and Suspension from Somatic Tissues	49
3	Chromosomal Constitution of Plants or Shoots Regenerated from Callus or Cell Suspension	58
4	Nuclear Conditions of Protoplast-Derived Plants	68
5	Karyological Analyses of Somatic Hybrids	70
6	Karyology of Genetically Transformed Plants	73
7	Concluding Remarks	74
	References	76

I. 3 Genetic Mosaics and Chimeras: Implications in Biotechnology

M. MARCOTRIGIANO (With 3 Figures)

1	General Account	85
2	Formation of Chimeras	90
3	Separation of Chimeras	92
4	Chimerism and Somaclonal Variation	95

5	Direct Implications of Chimerism in Tissue Culture and Genetic Engineering	97
6	„Epigenetic Chimeras“?	104
7	Concluding Remarks	105
	References	106

✓ I. 4 Genetic Bases of Variation from in Vitro Tissue Culture

M. SIBI (With 4 Figures)

1	Variant Plants Resulting from Tissue Culture: History, Heredity, and Terminology	112
2	Genetic Potential, in Vitro Phase Duration and Variability	114
3	Variant Plants Regenerated from in Vitro Cultured Cells	116
4	Plant Organization and Hereditary Transmissibility of the Original Cell Modifications	117
5	Experimental Approach of the Biological Systems Implied	119
6	In Vitro Variants in Lettuce and Tomato	126
7	Conclusions	128
	References	129

✓ I. 5 Molecular Basis of Somaclonal Variation

S.G. BALL (With 2 Figures)

1	Introduction	134
2	Is Somaclonal Variation Culture-Induced?	134
3	Molecular Aspects: The Problem of Cause and Effect	135
4	The Use of Zymograms to Investigate the Origin of Somaclonal Variation	137
5	Overall DNA Amounts and Repetitive DNA Copy Number Changes	139
6	Plant Transposable Elements and Somaclonal Variation	142
7	DNA Methylation and Plant Tissue Culture	143
8	Organelle DNA Changes	145
9	Conclusions	148
	References	149

I. 6 Gene Amplification and Related Events

W. NAGL (With 18 Figures)

1	Introduction	153
2	The Plasticity of the Plant Genome	154
3	Unstable Gene Amplification and Cell Function	157
4	Differential DNA Replication	166
5	Stable (Permanent) DNA Amplification as a Factor of Evolution	175
6	Role of Gene Amplification in Somaclonal Variation in Plants	179
7	Mechanisms of Amplification	183

8 Concluding Remarks	185
References	186

I. 7 Optical Techniques to Measure Genetic Instability in Cell and Tissue Cultures

G.P. BERLYN, A.O. ANORUO, and R.C. BECK (With 8 Figures)

1 Introduction	202
2 Basic Information	203
3 Variation in Culture	204
4 Microspectrophotometry	204
5 DNA Cytofluorometry	214
6 Summary and Conclusions	220
References	221

I. 8 Environmentally Induced Variation in Plant DNA and Associated Phenotypic Consequences

C.A. CULLIS (With 3 Figures)

1 Introduction	224
2 The Plant Genome	224
3 Environmentally Induced Heritable Changes in Flax	225
4 Stability of the Genome in Inbreds and Hybrids	229
5 Somaclonal Variation	229
6 Conclusions	233
References	234

I. 9 Somaclonal Variation for Salt Resistance

M. TAL

1 Introduction	236
2 Salt-Resistant Somaclones	237
3 Physiology and Genetics of Salt Resistance in Cell Culture	245
4 Discussion and Perspectives	249
5 Protocols	251
References	252

I. 10 Somaclonal Variation for Nematode Resistance

G. FASSULIOTIS (With 4 Figures)

1 Introduction	258
2 Eggplant (<i>Solanum melongena</i>)	259
3 Potato (<i>Solanum tuberosum</i>)	264
4 Discussion and Conclusions	265
References	267

Section II Cereals (For Wheat and Triticale see Vol. 13)

II. 1 Somaclonal Variation in Cereals

C. TONELLI

1 Introduction	271
2 Terminology	271
3 Examples of Somaclonal Variation in Cereals	271
4 Possible Origin of Somaclonal Variation	278
5 Nature of Genetic Changes in Somaclones	278
6 Somaclonal Variation Versus Chemical Mutagenesis	283
7 Concluding Remarks	283
References	284

II. 2 Somaclonal Variation in Rice

Z-X SUN and K-L ZHENG (With 1 Figure)

1 Introduction	288
2 In Vitro Culture and Somaclonal Variation in Rice	291
3 Conclusions and Prospects	314
References	315

II. 3 Somaclonal Variation in Maize

E.D. EARLE and A.R. KUEHNLE (With 2 Figures)

1 Introduction	326
2 Regeneration of Maize Plants	327
3 Somaclonal Variation	331
4 Conclusions and Prospects	347
References	348

II. 4 Somaclonal Variation in Barley (*Hordeum vulgare* L.)

A. BREIMAN and D. ROTEM-ABARBANEL (With 4 Figures)

1 Introduction	352
2 Barley Tissue Culture	354
3 Variation in the Callus and Regenerated Plants	361
4 Application of In Vitro-Induced Variation in Barley Breeding	369
5 Conclusions and Prospects	370
References	371

Section III Vegetables and Fruits**III. 1 Somaclonal Variation in Potato****A. KARP (With 7 Figures)**

1 Introduction	379
2 In Vitro Regeneration in Potato	380
3 The Genotypic Basis of Somaclonal Variation in Potato	386
4 Factors Affecting Somaclonal Variation in Potato	389
5 Somaclonal Variation and Potato Breeding	392
6 Conclusions and Prospects	395
References	395

III. 2 Somaclonal Variation in Tomato**M. BUIATTI and R. MORPURGO (With 1 Figure)**

1 General Account	400
2 Somaclonal Variation	404
3 Conclusions and Future Prospects	410
References	411

III. 3 Somaclonal Variation in Eggplant (*Solanum melongena* L.)**R. ALICCHIO (With 11 Figures)**

1 Introduction	416
2 Somaclonal Variation	417
3 Conclusions and Prospects	432
References	432

III. 4 Somaclonal Variation in Cucurbits**V. MORENO and L.A. ROIG (With 8 Figures)**

1 Introduction	435
2 Plant Regeneration in in Vitro Cultures of Cucurbits	440
3 Somaclonal Variation	454
4 Final Remarks and Outlook	457
5 Protocols for Plant Regeneration from in Vitro Cultures of Melon	459
References	462

III. 5 Somaclonal Variation in Sugarbeet**J.W. SAUNDERS, W.P. DOLEY, J.C. THEURER, and M.H. YU
(With 8 Figures)**

1 Introduction	465
2 In Vitro Regeneration of Plants	470
3 Somaclonal Variation Without Selection	475

4 Somatic Cell Selection	484
5 Tolerating Somaclonal Variation	485
6 Prospects for Utilization of Somaclonal Plants	486
References	488

III. 6 Somaclonal Variation in Chicory

S. GRAZIA, G. ROCCHETTA, and E. PIERAGOSTINI (With 5 Figures)

1 Introduction	491
2 In Vitro Culture and Somaclonal Variation	492
3 Summary and Conclusions	506
References	506

III. 7 Somaclonal Variation in Strawberry

K. NIEMIROWICZ-SZCZYTT (With 12 Figures)

1 Introduction	511
2 Somaclonal Variation	513
3 Conclusions and Prospects	524
References	526

III. 8 Somaclonal Variation in Peach

F. HAMMERSCHLAG (With 5 Figures)

1 Introduction	529
2 Variation in Micropropagated Plants	530
3 Variation in Embryo-Derived Callus and the Regenerated Plants	530
4 Variability in Anther-Derived Callus	533
5 Variability Through in Vitro Mutant Selection	534
6 Summary and Conclusion	535
References	536

Section IV Ornamentals and Forage Plants

IV. 1 Somaclonal Variation in *Pelargonium*

A. BENNICI (With 4 Figures)

1 Introduction	541
2 Somaclonal Variation	542
References	560

IV. 2 Somaclonal Variation in *Fuchsia*

J. BOUHARMONT and P. DABIN (With 4 Figures)

1 Introduction	562
--------------------------	-----

2	In Vitro Culture in <i>Fuchsia</i>	563
3	Somaclonal Variation	569
4	Possible Use of Induced Variation	570
	References	571

IV. 3 Somaclonal Variation in Carnations

B. LESHEM (With 3 Figures)

1	Introduction	573
2	The Chimera Nature of Carnation – A Source of Variation	574
3	Tissue Culture – A Source of Somaclonal Variation	575
4	In Vitro Regeneration of Carnation	575
5	Conclusions	583
	References	583

BAJAJ, Y. P. S., Former Professor of Tissue Culture, Punjab Agricultural

IV. 4 Somaclonal Variation in *Haworthia*

Y. OGIHARA (With 8 Figures)

1	Introduction	586
2	Establishment of Callus Cultures and the Regeneration of Plants	587
3	Somaclonal Variation in Callus Cultures and Regenerants	588
4	Conclusions and Prospects	602
	References	603

IV. 5 In Vitro Variation in *Weigela*

M. DURON and L. DECOURTYE (With 11 Figures)

1	Introduction	606
2	Conventional Practices	608
3	In Vitro Approaches	611
4	In Vitro-Induced Variation	615
5	Conclusion	622
	References	622

IV. 6 Somaclonal Variation in *Nicotiana glauca*

D. PRAT, R. DE PAEPE, and X.Q. LI (With 8 Figures)

1	Introduction	624
2	In Vitro Techniques	625
3	Variation by Androgenesis	634
4	Variation by Protoplast Culture	640
5	Variation by Tissue Culture	644
6	Induction of New Characteristics and Transfer by Somatic Hybridization	644

7 Discussion	646
References	649

VI. 7 Somaclonal Variation in Alfalfa (*Medicago sativa* L.)

L.B. JOHNSON and M.R. THOMAS (With 4 Figures)

1 Introduction	654
2 Somaclonal Variation	656
References	673

Subject Index	679
--------------------------------	-----

Section 7. Somaclonal Variation in Strawberry

K. NIEMIROWICZ-SZCZYTT (With 12 Figures)

1 Introduction	687
2 Somaclonal Variation	688
3 Conclusions and Prospects	692
References	693

Section 8. Somaclonal Variation in Peach

E. HAMMERSCHLAG (With 5 Figures)

1 Introduction	693
2 Variation in Micropropagated Plants	694
3 Variation in Embryo-Derived Callus and the Regenerated Plants	695
4 Variability in Anther-Derived Callus	696
5 Variability Through in Vitro Micropropagation	697
6 Summary and Conclusions	698
References	699

Section IV. Ornamentals and Forage Plants

IV. 1 Somaclonal Variation in *Helianthus*

A. BENNETT (With 4 Figures)

1 Introduction	701
2 Somaclonal Variation	702
References	703

IV. 2 Somaclonal Variation in *Helianthus*

J. BOCHAROV and P. DIMITROV (With 4 Figures)

1 Introduction	704
--------------------------	-----
