List of Contributors	ix
Preface	xi
Chapter 1. Molecular Biology of Plants	1
Overview	1
Identification and Cloning of Plant Genes Involved In Plant-Microbial Interactions	2
Plant Gene-Transfer Biotechnologies	18
References	36
Chapter 2. Recent Advances in Molecular Biology Techniques for Studying Phytosymbiotic Microbes	51
Introduction	52
Bacterial Molecular Genetics	53
Fungal Molecular Genetics	71
Plant Viruses and Mycoplasmas	73
Prospects	75
References	77
Chapter 3. Use of Genetically Altered Bacteria to Achieve Plant Frost Control	85
Introduction	85
The Nature of Plant Frost Injury	86
Plant Supercooling and Plant Frost Injury	87
Plant-Associated Ice-Nucleating Bacteria	88
Molecular Determinants of Bacterial Ice Nucleation	92
Modification of Microbial Populations and Plant Frost Injury	94
Tests of Competitive Exclusion Using Ice-Recombinant Strains	98
Integrated Chemical and Biological Control of Frost Injury	100

Research Needs to Improve Biological Frost Control	102
References	104
Chapter 4. Commercial Development of <i>Bacillus thuringiensis</i> Bioinsecticide Products*	112
Introduction	112
Molecular Genetic Basis of Insecticidal Activity	113
Mechanism of Action	118
Commercialization Strategies for Increasing the Effectiveness of BT Insecticides	125
Summary	136
References	137
Chapter 5. Molecular Genetics of Nitrogen Fixation in Plant-Bacteria Symbioses	145
Introduction	145
Nitrogenase	149
Regulation of Nitrogenase Activity	152
Role of NifA and NifL	156
Organization of <i>nif</i> Genes in Symbiotic Bacteria	168
Future Prospects for Increasing Symbiotic Nitrogen Fixation	175
References	178
Chapter 6. Microbial Colonization of Plant Roots	189
Introduction	190
The Rhizosphere and Colonization	190
Plant Root Architecture and Colonization	192
Root Exudates and Their Characteristics	195
Microbial Communities That Develop in the Rhizosphere	202
Nutrients and Plant Community Productivity	207
Biotechnological Implication and Opportunities	211
Epilogue	217
References	218
Chapter 7. Mycorrhizal Associations	227
Introduction	227
Classification of Mycorrhizae	229
Geographical Distribution and Ecosystem Relationships	237
Interdependence of Mycorrhizal Fungi and Hosts	241
Root-Growth Characteristics and Mycorrhizal Development	243
Utilization of Mycorrhizal Fungi in Forestry and Agriculture	246
References	249

Contents	vii
Chapter 8. Fungi as Biological Control Agents	257
Introduction	257
Mycoparasitism in Fungal Biocontrol Agents	258
Nonmycoparasitic Fungal Biocontrol Agents	264
Fungal Biocontrol Agents of Nematodes	266
Ecology of Fungal Biocontrol Agents	267
Production and Application of Fungal Biocontrol Agents	273
Biotechnology and Fungal Biocontrol Agents	276
Future Prospects for Fungal Biocontrol Agents	277
References	279
Chapter 9. Biological Control of Plant Root Diseases by Bacteria	287
Introduction	287
Mechanisms of Biological Disease Control	290
Role of Root Colonization in Biological Disease Control	302
Development of Biological Disease-Control Agents	304
Conclusions and Future Possibilities	307
References	309
Chapter 10. EPA Regulations Governing Release of Genetically Engineered Microorganisms	319
Introduction	319
U.S. Government Approach to Regulation of Biotechnology	320
EPA's Regulatory Program for Biotechnology	324
EPA's Research Program for Biotechnology	337
Summary	339
References	339
Index	341
