Preface	ix
I The C Language	1
1 Introduction	1
1.1 Who Defines C?	2
1.2 An Overview of C Programming	3
1.3 Syntax Notation	5
2 Lexical Elements	6
2.1 Character Set	6
2.2 Comments	9
2.3 Tokens	10
2.4 Operators and Separators	11
2.5 Identifiers	11
2.6 Reserved Words	14
2.7 Constants	14
3 The C Preprocessor	25
3.1 Preprocessor Commands	25
3.2 Preprocessor Lexical Conventions	26
3.3 Definition and Replacement	27
3.4 File Inclusion	40
3.5 Conditional Compilation	41
3.6 Explicit Line Numbering	47
4 Declarations	48
4.1 Organization of Declarations	49
4.2 Terminology	51
4.3 Storage Class Specifiers	58
4.4 Type Specifiers	62
4.5 Declarators	65
4.6 Initializers	70
4.7 Implicit Declarations	78
4.8 External Names	79

5 Types	81
5.1 Integer Types	82
5.2 Floating-point Types	89
5.3 Pointer Types	90
5.4 Array Types	93
5.5 Enumeration Types	97
5.6 Structure Types	100
5.7 Union Types	108
5.8 Function Types	112
5.9 Void	114
5.10 Typedef Names	115
5.11 Type Equivalence	118
5.12 Type Names and Abstract Declarators	120
6 Conversions and Representations	123
6.1 Representational Issues	123
6.2 Conversions	129
6.3 The Usual Conversions	134
7 Expressions	138
7.1 General Comments	138
7.2 Expressions and Precedence	139
7.3 Primary Expressions	143
7.4 Postfix Expressions	146
7.5 Unary Expressions	153
7.6 Binary Operator Expressions	161
7.7 Logical Operator Expressions	173
7.8 Conditional Expressions	181
7.9 Assignment Expressions	183
7.10 Sequential Expressions	186
7.11 Constant Expressions	187
7.12 Order of Evaluation	189
7.13 Discarded Values	191
7.14 Compiler Optimization of Memory Accesses	192
8 Statements	195
8.1 General Syntactic Rules for Statements	196
8.2 Expression Statements	197
8.3 Labeled Statements	198
8.4 Compound Statement	198
8.5 Conditional Statement	201
8.6 Iterative Statements	204
8.7 Switch Statement; Case and Default Labels	212
8.8 Break and Continue Statements	217
8.9 Return Statement	221
8.10 Goto Statement and Named Labels	221

8.11 Null Statement	223
9 Functions	224
9.1 Function Definitions	224
9.2 Function Types	225
9.3 Formal Parameter Declarations	226
9.4 Adjustments to Parameter Types	228
9.5 Parameter-Passing Conventions	229
9.6 Agreement of Formal and Actual Parameters	231
9.7 Function Return Types	232
9.8 Agreement of Actual and Declared Return Type	232
9.9 Main Programs	233
10 Program Structure	234
10.1 Modularization	234
10.2 Designing the Stack Module	235
10.3 Data Structures	236
10.4 Robustness	236
10.5 Allocating and Deallocating Stacks	238
10.6 Operations	238
10.7 Packaging the Module	240
11 Draft Proposed ANSI C	246
11.1 Lexical Elements	246
11.2 Preprocessor	251
11.3 Declarations	254
11.4 Types	262
11.5 Conversions and Representations	268
11.6 Expressions	273
11.7 Statements	275
11.8 Run-time Library	276
II The C Libraries	278
12 Introduction to the Libraries	279
12.1 Draft Proposed ANSI C Facilities	280
13 Standard Language Additions	283
13.1 NULL, ptrdiff_t, size_t	283
13.2 errno, strerror, perror	284
13.3 __DATE__, __FILE__, __LINE__, __TIME__, __STDC__	285
13.4 vararg, stdarg	286
14 Character Processing	290
14.1 isalnum, isalpha, isascii, iscntrl	291
14.2 iscsym, iscsymf	292
14.3 isdigit, isodigit, isxdigit	292
14.4 isgraph, isprint, ispunct	293
14.5 islower, isupper	294

14.6 isspace, iswhite	294
14.7 toascii	294
14.8 toint	295
14.9 tolower, toupper	295
15 String Processing	296
15.1 strcat, strncat	297
15.2 strcmp, strncmp	298
15.3 strcpy, strncpy	299
15.4 strlen	299
15.5 strchr, strpos, strchr, strpos	300
15.6 strspn, strcspn, strpbrk, strpbrk	301
15.7 strstr, strtok	302
15.8 strtod, strtol, strtoul	302
15.9 atof, atoi, atol	304
16 Memory Functions	306
16.1 memchr	306
16.2 memcmp, bcmp	307
16.3 memcpy, memccpy, memmove, bcopy	307
16.4 memset, bzero	308
17 Input/Output Facilities	310
17.1 EOF	311
17.2 fopen, fclose, fflush, freopen	312
17.3 setbuf, setvbuf	313
17.4 stdin, stdout, stderr	314
17.5 fseek, ftell, rewind	315
17.6 fgetc, getc, getchar, ungetc	316
17.7 fgets, gets	317
17.8 fscanf, scanf, sscanf	318
17.9 fputc, putc, putchar	326
17.10 fputs, puts	327
17.11 fprintf, printf, sprintf	328
17.12 vfprintf, vprintf, vsprintf	337
17.13 fread, fwrite	341
17.14 feof, ferror, clearerr	342
17.15 remove, rename	343
17.16 tmpfile, tmpnam, mktemp	343
18 Storage Allocation	345
18.1 malloc, calloc, mlalloc, clalloc	346
18.2 free, cfree	347
18.3 realloc, relalloc	347

19 Mathematical Functions	349
19.1 abs, fabs, labs	350
19.2 div, ldiv	350
19.3 ceil, floor, fmod	351
19.4 exp, log, log10	352
19.5 frexp, ldexp, modf	352
19.6 pow, sqrt	353
19.7 rand, srand	354
19.8 cos, sin, tan	354
19.9 acos, asin, atan, atan2	355
19.10 cosh, sinh, tanh	356
20 Time and Date Functions	357
20.1 clock, clock_t, CLK_TCK, times	357
20.2 time, time_t	359
20.3 asctime, ctime	360
20.4 gmtime, localtime, mktime	360
20.5 difftime	362
21 Control Functions	363
21.1 assert, NDEBUG	363
21.2 exec, system	364
21.3 exit, abort	365
21.4 setjmp, longjmp, jmp_buf	366
21.5 onexit, onexit_t	367
21.6 signal, raise, gsignal, ssignal, psignal	368
21.7 sleep, alarm	370
22 Miscellaneous Functions	371
22.1 main	371
22.2 ctermid, cuserid	373
22.3 getcwd, getwd	374
22.4 getenv, getlogin, getopt, putenv	374
22.5 bsearch	375
22.6 qsort	375
A The ASCII Character Set	377
B Syntax of the C Language	380
Index	393
