Contents

Part I Nature of Species

1. Plant Reproduction 3
2. The Biological Species 19
3. The Evolutionary Species 37
4. The Species Situation in Plants 46
5. The Genetic Basis of Species Differences 61
6. Reproductive Isolation 73

Part II Divergence of Species

7. Patterns of Species Relationships 81
8. Primary Speciation 105
9. Chromosome Repatterning 126
10. The Wallace Effect 135

Part III Refusion and Its Consequences

11. Natural Hybridization 151
12. Introgression 163

13. Hybrid Speciation 185
14. Recombinational Speciation 199

Part IV Derived Genetic Systems

15. Polyploidy 219
16. Factors Promoting Polyploidy 245
17. Agmatoploidy 262
18. Agamospermy 271

Part V Evolution of Hybrid Complexes

19. The Hybrid Complex 295
20. The Polyploid Complex 300
21. The Agamic Complex 321
22. The Clonal Complex 349
23. The Heterogamic Complex 355
24. The Homogamic Complex 378

Bibliography 387

Organism Index 417
