

Contents

I. ANALYSIS OF THE SPATIAL CONFIGURATIONS OF CHAIN MOLECULES AND TREATMENT OF SIMPLIFIED MODEL CHAINS	1
1. Specification of the Configuration of a Chain Molecule . . .	2
2. Spatial Distributions	5
3. Moments of Distributions	8
4. The Unperturbed State	9
5. The Freely Jointed Chain	10
6. Configurations of Chains Having Fixed Bond Lengths and Bond Angles	12
7. The Freely Rotating Chain	16
8. Neighbor Correlations in Real Chains and the Geometrical Interrelation of Bond Vectors	19
9. Chains with Separable Configurational Energies	22
10. Chains with Fixed Bond Angles and Independent Bond Rotational Potentials	25
References	29
II. RANDOM COIL CONFIGURATIONS AND THEIR EXPERIMENTAL CHARACTERIZATION	30
1. The Preferred Conformation and the Random Coil	30
2. Interactions of Long Range: the Effect of Excluded Volume	32
3. Experimental Determination of the Unperturbed Dimensions of Chain Molecules	35
4. Temperature Coefficients of Unperturbed Dimensions of Macromolecules	39
5. Other Methods for Characterizing Random-Chain Configurations	45
References	48
III. CONFIGURATIONAL STATISTICS OF CHAIN MOLECULES WITH INTERDEPENDENT ROTATIONAL POTENTIALS	49
1. Bond Rotational Potentials for Simple Molecules	50

2. The Rotational Isomeric State Approximation	55
3. Statistical Weight Matrices for Interdependent Bonds	61
4. The Configuration Partition Function: General Formulations . .	66
5. The Configuration Partition Function for Chains with Interdependent Threefold Potentials	72
6. Average Bond Conformations	73
7. Some Illustrative Applications	80
8. Conditional Probabilities and the Non-Markoffian Character of the Configurational Statistics	89
9. Concluding Remarks	92
References	93
 IV. MOMENTS OF CHAIN MOLECULES	 95
1. Averages of Products of the Transformation Matrices	95
2. Mean-Square Moments	100
3. Second Moments for Simple Chains of Infinite Length	108
4. The Persistence Length	111
5. The Mean-Square Radius of Gyration	111
6. Chains with Independent Rotation Potentials	114
7. Random and Markoffian Copolymers	117
8. The Fourth Moment of a Vector $\mathbf{M}$	122
References	129
 V. SYMMETRIC CHAINS	 130
1. Methods for Estimating Conformational Energies	131
2. Conformational Energies of <i>n</i> -Alkanes	133
3. Statistical Weights for Polymethylene Chains	140
4. Results for Polymethylene Chains	144
5. Polytetrafluoroethylene and Its Oligomers	152
6. Polymeric Sulfur and Selenium	157
7. Polyoxymethylene	159
8. Polyoxyethylene	165
9. Higher Polyoxyalkanes	172
10. Polydimethylsiloxane	174

11. The Polyphosphate Chain	180
12. Polyamides and Polyesters	182
13. 1,4 Polymers of Butadiene and Isoprene	192
14. Polyisobutylene and its Analogs	198
References	201
 VI. ASYMMETRIC VINYL CHAINS	 205
1. Stereochemical Configurations	205
2. Interactions of First Order	208
3. Interactions of Second Order	212
4. Statistical Weight Matrices and Preferred Conformations	216
5. Symmetry Relations and the Partition Function	223
6. Moments of Vinyl Chains	227
7. Stereoregular Chains	229
8. Average Dimensions of Stereoirregular Chains	232
9. Equilibrium Stereochemical Configurations	239
References	246
 VII. POLYPEPTIDES, PROTEINS, AND ANALOGS	 248
1. Steric Maps for Polypeptides	250
2. Conformational Energies for Polypeptides	255
The Glycyl Residue	258
The L-Alanyl Residue	261
The Lactyl Residue	265
The Prolyl Residue	268
3. Random-Coil Statistics of Homopolymeric Chains	274
The Partition Function	274
Averaged Transformation Matrices	275
Average Dimensions of Random Coils	277
4. Average Dimensions of Copolypeptides	281
5. Cooperative Configurational Transformations: Helix-Coil Transitions	286
6. Configurational Transitions in Proteins	296
References	304

VIII. THE STATISTICAL DISTRIBUTION OF CONFIGURATIONS	307
1. Statistical Thermodynamic Relations for Chain Molecules	307
2. The Chain Vector Distribution and Its Fourier Transform	309
3. The Freely Jointed Chain: Exact Treatment	313
4. Approximate Distribution Functions for Freely Jointed Chains	316
5. Moments of the Distributions for Various Chains, Hypothetical and Real	326
6. Chain Vector Distributions for Real Chains	334
7. Moments of the Radius of Gyration and Its Statistical Distribution	337
References	338
IX. OPTICAL PROPERTIES AND RADIATION SCATTERING	340
1. Radiation Scattering: Dependence on Angle and Wavelength	341
Primary Relationships	341
Flexible Chains	344
Molecular Scattering ($v < 3$)	347
Submolecular Scattering ($v \gg 3$)	351
2. Depolarization in Optical Scattering	353
General Formulation	354
Configurational Averages	358
Treatment of Polymethylene Chains	361
3. Strain Birefringence in Amorphous Polymers	365
The Freely Jointed Chain	368
Real Chains	372
4. Electric Birefringence of Polymer Chains: The Kerr Effect .	377
