

TABLE OF CONTENTS

U.S. Polyurethanes: A Mature Industry?	1
Peter J. Manno, <i>The Upjohn Company</i>	
Plastics under Fire: Emotion versus Reason in the Marketplace	6
Matthew H. Naitove and Agostino von Hassell, <i>Plastics Technology Magazine</i>	
From Myth to Market	9
Graeme H. Wallace, <i>Dunlop Olympic General Products Group</i>	
Potentials for Foam Core Mattresses in the Bedding Industry	30
James D. Orefice, <i>ARCO Chemical Company</i>	
Robert J. Luedeka, <i>J. P. Hogan & Company, Inc.</i>	
Rapid Method for Measuring the Hydroxyl Content of Polyurethane Polyols	36
Mark A. Carey, Stephen L. Wellons and Decker K. Elder, <i>Union Carbide Corporation</i>	
Primary Hydroxyl Content in Polyols—	
Evaluation of Two Nuclear Magnetic Resonance (NMR) Methods	43
C. L. LeBas, <i>Texaco Chemical Company</i>	
P. A. Turley, <i>Olin Corporation</i>	
Rapid Hydroxyl Number Determination by Near Infrared Reflectance Analysis	49
P. A. Turley, <i>Olin Corporation</i>	
A. Pietrantonio, <i>Technicon Industrial Systems</i>	
Developments in High Quality, Low Density Flexible Slabstock Foam	53
Timothy P. Hurley, <i>Union Carbide Corporation</i>	
A Critical Look at Data Evaluation for Flexible Slabstock Foam	57
Larry L. Bradford and Terry L. Moore, <i>The Dow Chemical Company</i>	
Optimizing Amine Catalyst Levels in Flexible Slabstock Foams	61
B. A. Smoyer and E. A. Galla, <i>Air Products and Chemicals, Inc.</i>	
Is It Really Necessary to Use an Auxiliary Blowing Agent in the Production of Flexible	
Slabstock Polyurethane Foams? First Approach to Foams Expanded with Water Only	67
S. Consoli, G. Rosso and P. Pizzolo, <i>MONTEPOLIMERI, S.p.A.</i>	
Vertifoam—Continuous Vertical Block Foam Process	76
Tony Griffiths and Peter Shreeve, <i>Hyman International Limited</i>	
New Polyols for Urethane Modified Isocyanurate Foams	80
Kenneth B. White, Bill Largent, Keith Stanley and Linda Jirka, <i>Arnak Company</i>	
“Bimetallic” Bow of Rigid Urethane Foam Composites	85
L. D. (Lou) Booth and Lee M. Huber, <i>The Dow Chemical Company</i>	
Thermal Protection System for the Space Shuttle External Tank	90
C. Williams and L. Ronquillo, <i>Martin Marietta Corporation</i>	
Methods of Improving Refrigerant 11 Compatibility in Isocyanurate Systems Containing	
Waste Stream Aromatic Polyesters	101
S. C. Cohen, M. J. Cartmell and R. K. Brown, <i>Rubicon Chemicals, Inc.</i>	
Processing and Properties of Low Density High Modulus RRIM Composites	106
William A. Gill, <i>Union Carbide Corporation</i>	
The European Approach to Automotive RIM	112
J. R. Daniels, <i>ICI Europe</i>	
A New Polyurethane RIM Material to Answer the Thermoplastic Structural Foam Challenge	118
Patricia M. Boyd, <i>Mobay Chemical Corporation</i>	
“Leisure Products via RIM”	121
R. J. Lockwood, A. A. Peterson and L. M. Alberino, <i>The Upjohn Company</i>	

RIM Onto Preplaced Reinforcement for EMI Shielded Applications	125
T. C. Wilkinson, S. F. Chappell and W. L. Kelly, <i>Ashland Chemical Company</i>	
Rotomolding of Polyurethane Sailboards	128
E. Allan Blair, <i>Monster M Manufacturing Corporation</i>	
Titanate Coupling Agents—1983 Urethane Applications	131
S. J. Monte and G. Sugerman, Ph.D., <i>Kenrich Petrochemicals, Inc.</i>	
Recycling Flexible Foam: A Novel Technology	139
Produces a Quality Product with Improved Economics	
B. D. Bauman, P. E. Burdick, M. L. Bye and E. A. Galla, <i>Air Products & Chemicals, Inc.</i>	
Reactive Antimicrobial Agents for Urethane Foams	142
R. Patarcy, E. Stern and U. Murthy, <i>Inolex Chemical Company</i>	
Upgrading the Long Term Stability of Polyurethanes by the Use of Pigments	145
Robert G. Sutton and James A. Steever, <i>Pigment Dispersions, Inc.</i>	
Methods and Devices for Continuously Producing of Polyurethane Foam	148
Jean A. A. Poncet, <i>LYON</i>	
Flexible Polyurethane Molded Foams Based on MDI	156
I. Buethe, <i>BASF AG</i>	
C. J. Reichel and J. D. Taylor, <i>BASF Wyandotte Corporation</i>	
Influence of Amine Catalysis on Processability	161
and Physical Properties of HR Molded Foams	
F. M. H. Casati, F. W. Arbir and E. J. Tylenda, <i>Abbott Laboratories</i>	
New Advances in Surfactants for Molded High Resiliency Urethane Foam	172
David R. Battice, <i>Dow Corning Corporation</i>	
Humid Aged Compression Set Phenomena in All Water Blown HR Molded Foams	177
R. M. Herrington and D. L. Klarfeld, <i>The Dow Chemical U.S.A.</i>	
Dual Firmness HR Molded Foam Automotive Seats via the Polymer Polyol Route	183
Paul M. Westfall, <i>Union Carbide Corporation</i>	
Recent Advances in High Resilience (HR) Foam Technologies	188
G. A. Kleiner, T. Pham and R. J. Tenhagen, <i>BP Chemicals (Suisse) SA</i>	
The Influence of Formulation Parameters on ASTM E84	196
Class I Performance for Pour-in-place Rigid Foams	
M. J. Cartmell, S. C. Cohen and A. T. Hurst, <i>Rubicon Chemicals, Inc.</i>	
An Improved Method for Assessing Fire Properties of Cellular Plastic Pipe Insulation Systems	202
Herbert G. Nadeau, Paul H. Waszeczak and William P. Chien, <i>The Upjohn Company</i>	
New Low Viscosity Brominated Polyols: Flame Retardants for Rigid Polyurethane Foam	213
Henry J. Barda and William J. Eldridge, <i>Saytech, Inc.</i>	
New Low Smoke Space Class I and Class II Systems for Rigid Polyurethane Foam	218
Based on Reactive Halogenated Flame Retardant	
Enrico J. Termine and John G. Uhlmann, <i>The Dow Chemical Company</i>	
New Reactive Phosphorus Flame Retardant for Rigid Polyurethane Foam Application—Part II	223
Fui-Tseng H. Lee, Joseph Green and Robert D. Gibilisco, <i>FMC Corporation</i>	
Fire Test Comparison of a Mini-Compartment Corner Test	229
to a Full Scale Enclosed Room Fire Test	
Lotar H. Hanusa, <i>Mobay Chemical Corporation</i>	
RIM Processing of Three Component Polyurethane Systems	234
Walter E. Trott, <i>Cannon U.S.A., Inc.</i>	
Piero Corradi, <i>Afros-Cannon S.p.A.</i>	
New Technology in Reinforced Reaction Injection Molding (RRIM) Bulk Blending Tank Farms	239
Andrew B. Lehnert, <i>Admiral Equipment Company</i>	
RIM—A Process Explosion	244
Gerret M. Peters, Jr., <i>Battenfeld</i>	
Progress in Metering and Mixing Equipment	250
Fritz W. Schneider, <i>Martin Sweets (PII) Company, Inc.</i>	
Machine Technology for Highly Loaded BASO₄ and/or Glass-filled	255
Urethane Parts for the Automotive and Non-Automotive Industry	
Manfred Petersen, <i>Krauss-Maffei AG</i>	
LIM Molded Tire Technology Strategic Considerations	263
Richard Marchiando, <i>LIM Kunststoff-Technologie GmbH</i>	

The Slow Speed Elevator Leg and Toledo Bucket Development Documentary	267
David E. Tweet, <i>Cargill, Inc.</i>	
A High-Impact Polyurethane Engineering Thermoplastic	277
B. S. Ehrlich, W. J. Farrissey, D. J. Goldwasser, R. W. Oertel and K. Onder, <i>The Upjohn Company</i>	
Significant Advances in Polyether Shoe Sole Systems	282
R. C. Allen, S. H. Metzger and T. M. Liang, <i>Mobay Chemical Corporation</i>	
Now Is the Time for Aliphatic Polyurethanes	288
L. J. Willwerth, <i>K. J. Quinn & Co., Inc.</i>	
• Polyurethane Elastomers (PUE)—Panacea of Polymers	292
Sigmund Orchon, <i>Poly Resins Corp.</i>	
A New Polyester for High Performance Urethane Castings	299
Robert Patarcy, <i>Inolex Chemical Company</i>	
A Study in Smoldering Test Behavior versus Air Flow Variations in Fabric	303
Gerald Fesman, <i>Stauffer Chemical Company</i>	
Improved Furniture and Mattress Fire Safety through the Use of Combustion Modifying Polyurethane Foam	307
John G. Schuhmann, <i>The Dow Chemical Company</i>	
A New Amine Catalyst and Silicone Surfactant for Low Combustibility Polyester Foams	316
J. Pavlenyi, F. O. Baskent and G. J. Murphy, <i>Union Carbide Corporation</i>	
Understanding Polymer Flammability	320
Dr. Ronald V. Petrella, <i>The Dow Chemical Company</i>	
Development of Flame Retardant Flexible Foams and Flammability Testing in Australia	323
K. B. Stanton and G. Patching, <i>Henderson's F.R.S. Industries</i>	
CMHR Foam for High Risk Occupancies	326
J. F. Szabat and J. A. Gaetano, <i>Mobay Chemical Corporation</i>	
A Basic Study of Aging of Foam Insulation	332
D. W. Reitz and M. A. Schuetz, <i>Owens-Corning Fiberglas Corp.</i>	
L. R. Glicksman, <i>Massachusetts Institute of Technology</i>	
A Basic Study of Heat Transfer through Foam Insulation	341
M. A. Schuetz, <i>Owens-Corning Fiberglas Corporation</i>	
L. R. Glicksman, <i>Massachusetts Institute of Technology</i>	
• The Use of a Unique Aromatic Polyester Polyol in Urethane Modified Isocyanurate Foam Systems	348
Robert J. Wood, <i>Stepan Company</i>	
A Simple Procedure to Determine the Rate of Rigid Urethane Reactions	352
Ichiro Kamemura and Shotaro Terasawa, <i>Asahi-Olin Co., Ltd.</i>	
Kiyoshi Tanabe, <i>Asahi Glass Co., Ltd.</i>	
Calculation and Measurement of Reaction Temperatures in Rigid Polyurethane and Polyisocyanurate Foams	357
Dr. R. E. Welte, <i>Mobay Chemical Corporation</i>	
• Dielectric Properties of Polyurethane Foams	361
F. A. Shutov and I. I. Chaikin, <i>Foamed Plastics Laboratory Civil Engineering Institute</i>	
Improved RIM Processing with Silicone Internal Mold Release Technology	365
J. M. Plevyak and L. A. Sobieski, <i>Dow Corning Corporation</i>	
A Self-Releasing RIM System for Increased Productivity, Operational Simplicity, and Improved Economics	370
Louis W. Meyer, <i>The Dow Chemical Company</i>	
Liquid MDI Isocyanates: Effects of Structure on Properties of Derived Polyurethane Elastomers	375
H. R. Gillis, A. T. Hurst and L. J. Ferrarini, <i>Rubicon Chemicals Inc.</i>	
A. Watts, <i>ICI Polyurethanes</i>	
RIMing of Low Viscosity Crosslinkable Alcohols with Diisocyanates	381
Dan Borgnaes, S. F. Chappell and T. C. Wilkinson, <i>Ashland Chemical Company</i>	
Hydroxypropylmelamine Resin—A New Reactive Catalyst and Chain Extender Polyol for RIM	387
T. G. Carver, R. R. DiLeone, M. M. Fisher, D. L. Johnson and B. J. Mearns, <i>American Cyanamid Company</i>	
A New Route to MDI without Phosgene	394
M. Chono, S. Fukuoka, M. Kohno, <i>Asahi Chemical Industry Co., Ltd.</i>	

Novel Isocyanate Binder Systems for Composite Wood Panels	399
J. M. Gaul, T. Nguyen, J. S. Babiec, Jr., <i>ARCO Chemical Company</i>	
The Fate of TDI in the Environment	408
P. Duff, <i>Olin Corporation</i>	
Two Carcinogenicity Studies of Toluene Diisocyanate	413
L. W. Rampy, <i>Dow Chemical USA</i>	
E. Loeser, <i>Bayer AG</i>	
J. P. Lyon, <i>ICI Americas</i>	
I. Carney, <i>Imperial Chemical Industries, Ltd.</i>	
The Use of Thermoplastic Polyurethane Elastomers in Orthodontics	416
Patrick D. Kidd and Terry L. Sterrett, <i>Ormco, Division of Sybron Corporation</i>	
Product Safety in the Polyurethane Industry	419
Steven J. Assony, Ph.D., <i>The Upjohn Company</i>	
Cell Structure Deformation of High Resilient Polyurethane Foam by Scanning Electron Microscopy	422
W. M. Lee, <i>The Dow Chemical Company</i>	
Evaluation of Hindered Phenols for Minimization of Foam Discoloration Using the Microwave Scorch Test	428
G. L. Statton and J. M. Gaul, <i>ARCO Chemical Company</i>	
Identification of Sequential Reactions in Urethane Foam Manufacturing by an Exotherm Measurement Technique	433
Jacques Leroux, <i>Union Carbide Canada Limited</i>	
Patrick Van Gheluwe, <i>Industrial Materials Research Institute</i>	
The Importance of Catalysts for the Formation of Flexible Polyurethane Foams	441
G. Burkhart, H. J. Kollmeier and H. H. Schloens, <i>Th. Goldschmidt AG</i>	
Catalysts for Polyester-based Flexible Urethane Foams	446
R. L. Zimmerman, <i>Texaco Chemical Company</i>	
A New Amine Catalyst and Silicone Surfactant for Rigid Polyurethane Foam Applications	450
C. R. Williams and F. O. Baskent, <i>Union Carbide Corporation</i>	
Catalysis of Medium and High Index Polyisocyanurate Foams	455
F. M. H. Casati, F. W. Arbir and D. S. Raden, <i>Abbott Laboratories</i>	
New Polyols for Isocyanurate Foams	464
Kenneth B. White, Bill Largent, Keith Stanley and Linda Jirka, <i>Armak Company</i>	
Method for Predicting Rigid Foam Demold Properties	467
Thomas E. Allen, <i>Mobay Chemical Corporation</i>	
Claus D. Sommerfeld, <i>Bayer AG</i>	
Silicone Surfactant Structural Requirements in Rigid Polyurethane Foams	474
M. W. Jorgenson, E. C. Lee, G. J. Murphy and F. O. Baskent, <i>Union Carbide Corporation</i>	
Experimental Polyurethane Foam Roof Systems	479
Robert L. Alumbaugh and J. R. Keeton, <i>Naval Civil Engineering Laboratory</i>	
E. F. Humm, <i>Naval Facilities Engineering Command</i>	
Weathering Stability of Polycarbonate Urethanes Compared with Polyester and Polyether Urethanes	494
Marilyn H. Hamb and Susan B. Gorman, <i>PPG Industries, Inc.</i>	
Flame Retardant Thermoplastic Polyurethanes: How Different Types of Additives Affect Performance and Appearance	499
Patricia A. Isaacs, <i>B. F. Goodrich Chemical Company</i>	
Polyether Based Polyurethanes—A Study of Diol Curatives	503
I. S. Lin and S. J. Gromelski, Jr., <i>GAF Corporation</i>	
Novel Curatives for Castable Urethane Elastomers	510
Fui-Tseng H. Lee, Joseph Green and Charles A. Tennesen, <i>FMC Corporation</i>	
Synthesis, Characterization and Properties of Polyisobutylene-Based Polyurethanes	514
Joseph P. Kennedy, <i>Institute of Polymer Science</i>	
Evaluation of Swelling Studies and Thermal Characteristics of Castor Oil Based Polyurethane Elastomeric Networks	517
Rajiv Kumar, S. K. Srivastava and G. N. Mathur, <i>Harcourt Butler Technological Institute</i>
