

CONTENTS

INTRODUCTION	1
APPENDIX	4
Units Used in Cell Physiology	4
 Section I	
Origin and Evolution of Cells	5
 CHAPTER 1	
ORIGIN AND NATURE OF PROKARYOTIC CELLS	7
Origin	7
Structure of Prokaryotic Cells	8
Chemical Composition of Prokaryotic Cells	10
Variation in Organization of Prokaryotic Cells	24
The Pleuropneumonia-Like Organisms (PPLO)	26
Organization of Viruses	27
Energy Release in Prokaryotes	29
Anaerobic Photosynthetic Bacteria	31
 CHAPTER 2	
EVOLUTION OF PHOTOSYNTHESIS, NITROGEN FIXATION, AND THE ATMOSPHERE	35
The Blue-Green Algae	35
Oxygen as a Poison	38
Prokaryote Metabolism	39
Glycolysis and the Evolution of Oxidases	40
Evolution of Photosynthetic Eukaryotic Cells	41
Atmospheric Oxygen from Photosynthesis	43
Nitrogen Fixation	44
Ultraviolet Radiation Before and After Photosynthesis	46
Regulation of the Ozone Layer by the Nitrogen Cycle	50
How Cells in Multicellular Organisms Are Supplied with Oxygen	51

CHAPTER 3

ORIGIN AND NATURE OF EUKARYOTIC CELLS	54
Organization	57
Origin of Eukaryotic Cells	58
Cytoplasmic Matrix, Microfilaments, and Microtubules	60
Membrane-Bound Organelles	62
Size Range and Diversity of Eukaryotic Cells	62
Variation in Organization of Animal Cells	62
Variation in Organization of Plant Cells	63
Chemical Composition of Eukaryotic Cells	64

APPENDIX	72
-----------------------	----

3.1 Staining Technique for Living and Fixed Cells	72
3.2 Autoradiography	72
3.3 Microscopical Techniques	72
3.4 Microcinematography	81
3.5 Micromanipulators	81

CHAPTER 4

ADJUSTMENT OF CELLS TO DIVERSE ENVIRONMENTS	85
Water in the Cell Environment	85
Salts in the Cell Environment	88
Resistance of Cells to Acidity and Alkalinity	91
Buffers	92
Heat Resistance of Active Cells	94
Cold Resistance of Active Cells	96
Freezing and Thawing of Cells	97
Thermal Resistance of Dormant Cells	98
Lack of Oxygen as a Limiting Factor	99
Pressure as an Environmental Factor	99
Radiation in the Cell Environment	102
Adaptability of Prokaryotes and Eukaryotes	102

APPENDIX	102
-----------------------	-----

4.1 Dissociation of Weak Acids, Weak Bases, and Water	102
4.2 The pH Scale	103
4.3 Measurement of the Strength of a Weak Acid by the pK_A	103
4.4 Ampholytes or Zwitterions	104
4.5 Methods of Measuring pH	105
4.6 Relation Between Concentration and Activity of Electrolytes	105
4.7 Buffer Mixtures Using a Weak Base and Its Salt	106

Section II

Cell Organelles	109
------------------------------	-----

CHAPTER 5

THE ENDOPLASMIC RETICULUM-GOLGI BODY COMPLEX	111
The Endoplasmic Reticulum	111

Ribosomes	114
The Golgi Complex	117
Lysosomes	122
Microbodies	123
Vacuoles	126
Miscellaneous Cell Inclusions	126
Summary	126

APPENDIX 127

5.1 Separation of Cell Organelles	127
5.2 Centrifugation for Study of Small Particles and Macromolecules	128
5.3 Localization of Chemicals in Cell Organelles: Cytochemistry	130
5.4 Paper Chromatography	132
5.5 Polyacrylamide Gel Electrophoresis	133

CHAPTER 6

**ENERGY TRANSDUCERS: MITOCHONDRIA AND
CHLOROPLASTS**

Mitochondria	136
Chloroplasts	146
Amyloplasts	153
Chromoplasts	153
Summary	153

CHAPTER 7

THE NUCLEUS, CHROMOSOMES, AND GENES

Relations Between Nucleus and Cytoplasm	156
Nuclear Organization	160
Chemistry of the Nucleus	163
The Nucleolus	164
Localization of DNA and RNA in Nuclei	164
Repeated DNA	166
Constancy in Nuclear DNA of a Species	167
Molecular Structure of the Chromosome	167
Chemical Nature of the Gene	175
The Role of the Gene	177
Comparison of the Genome in Bacteria, Viruses, and Eukaryotic Cells	179
Summary	180

CHAPTER 8

CELL MEMBRANES

The Cell Surface	184
Fine Structure of Cell Membranes	185
Chemical Constituents of Cell Membranes	186
Thickness of Cell Membranes	190
Structure of Cell Membranes	190
Membrane Asymmetry	194

Cell Surface Membrane Receptors	195
The Nuclear Envelope	195
Cell-to-Cell Contacts	196
Compartmentation of the Cell by Membranes	200
Summary	200

Section III

Conversions of Energy and Matter in the Cell 203

CHAPTER 9

THE DIRECTION OF CELLULAR REACTIONS: THERMODYNAMICS 205

Change in Form of Energy: Conservation of Energy	206
The Direction of Reactions: The Second Law of Thermodynamics ...	207
Energy Storage	208
Energy Exchange and Life	208
Coupled Reactions in the Cell	210
Chemical Potential	211
The Cell and Thermodynamics	211

APPENDIX 212

9.1 Free Energy	212
9.2 Entropy and the Second Law of Thermodynamics	214
9.3 Conversion of Mass to Energy	214

CHAPTER 10

VELOCITY OF CELL REACTIONS: KINETICS 216

Energy of Activation	216
Lowering the Activation Energy by Enzymes	217
Classification of Enzymes	219
Hydrolases	220
Specificity of Hydrolases	221
Chemical Nature of Enzymes	222
Activation of Hydrolases	223
Other Enzymes Involved in Cellular Metabolism	224
Effect of Environment on Enzyme Activity	228
Mechanism of Enzyme Action	230
Inhibition of Enzymes by Poisons	233

APPENDIX 235

10.1 The Arrhenius Equation	235
10.2 The Michaelis-Menten Equation for Enzyme Kinetics	235

CHAPTER 11

REDOX POTENTIALS 239

Redox Potentials at Electrodes Immersed in Electrolytes	239
Measurement of Redox Potentials of Organic Compounds	242

The Effect of pH on Redox Potentials	243
Potentials Developed by Biological Redox Systems	244
Coupling of Univalent and Divalent Enzymatic Redox Systems	245
Detection of Free Radicals by Their Magnetic Properties	248
Nuclear Magnetic Resonance	251
Determination of Redox Potentials in the Living Cell	253
APPENDIX	254
11.1 Derivation of Peter's Equation for Redox Potentials	254
11.2 Equation for the Effect of pH on Redox Potentials	255
 CHAPTER 12	
THE RELEASE OF ENERGY IN CELLS	257
The Nature of Oxidoreductions	257
Stepwise Release of Energy During Oxidoreductions	258
Pathways of Oxidoreductions in Cells	258
Anaerobic Decomposition of Glucose	261
Aerobic Decomposition of Glucose	264
The Metabolic Mill	267
Hydrogen and Electron Transfer; Oxidative Phosphorylations	267
Genesis of NADPH for Synthetic Reactions: The Pentose Shunt	269
Alternate Pathways	269
Mechanism of ATP Formation	271
Photic ATP Formation in a Halophilic Bacterium	272
Hydrogen Peroxide Formation as an End Product in Cellular Oxidation	273
Methods for Investigating Intermediary Metabolism	273
Enzymes in Organelles	274
Dynamic Nature of Cell Constituents	275
APPENDIX	276
12.1 Cycles of Matter	276
 CHAPTER 13	
OXYGEN CONSUMPTION AND BIOLUMINESCENCE OF CELLS	280
Oxygen Consumption of Cells	280
The Effect of Temperature on Q_{O_2}	282
The Effect of Oxygen Partial Pressure on Q_{O_2}	284
Respiratory Inhibitors	285
Hydration and Rate of Oxygen Consumption	285
Respiratory Quotient (R.Q.)	286
Heat Evolved During Respiration	287
Indirect Calorimetry	287
Cellular Oxidations Emitting Light	288
APPENDIX	292
13.1 Methods for Measuring Respiration	292
13.2 Relative Sensitivities of Various Methods	296

CHAPTER 14

PHOTOSYNTHESIS	298
Photosynthesis as an Oxidation-Reduction Reaction	298
Light (Photochemical) Reactions in Photosynthesis	299
The Photosynthetic Unit	301
Photophosphorylation and Photoreduction	301
The Function of Pigments in Photosynthesis	302
Evidence for Two Systems of Photochemical Reactions	306
Coupling Between Electron Transport and Photophosphorylation	312
The Dark Reactions in Photosynthesis	313
The Chloroplast as a Complete Photosynthetic Entity	316
C ₄ -Acid Photosynthesis	317
Crassulacean Plant Photosynthesis	319

CHAPTER 15

BIOSYNTHESIS	322
Nutritional Patterns	322
Biosynthesis of Small Organic Molecules	322
Biosynthesis of Lipids	324
Macromolecular Syntheses	325
Biosynthesis of RNA: Transcription	331
RNA-Directed DNA Synthesis: Reverse Transcription	335
Coding for mRNA, rRNA, and tRNA on DNA	335
The Genetic Code	336
Biosynthesis of Protein: Translation	338
Biosynthesis of Polysaccharides	346
Rate of Biosynthesis	347
Changes in Biosyntheses—Mutations	348
Extrachromosomal Inheritance	349
Correction of Errors in Replication and Repair of Damage to DNA	349
Recombinant DNA	350
Development of Cell Organelles	354

CHAPTER 16

REGULATION OF CELLULAR METABOLISM	357
Types of Regulation	357
Mass Action in Reversible Reactions	358
Competition for Shared Substrate	358
Allosteric Inhibition and Activation	358
Regulation by Covalent Changes in Enzymes	360
Regulation of Nucleic Acid Synthesis	361
Regulation of Protein Synthesis	361
Enzyme Induction, Repression, and Activation	362
Cyclic Adenosine Monophosphate as a Regulator	364
Regulation by Isozyme Formation	365
Regulation of Rate of Protein Degradation	366
Compartmentation	366
Regulation by Hormones—Intercellular Regulation	366

Section IV

Transport Across Cell Membranes 371**CHAPTER 17****PERMEATION AT THE EXPENSE OF KINETIC ENERGY** 373

Obstacles to Permeation	373
Kinetic Energy for Permeation	373
Exchange Diffusion	375
Water Flux	376
Solute Flux	382
Correlation of Permeability with Oil to Water Solubility	382
Effects of Molecular Diameter Upon Permeability	383
The Effect of Ionization on Permeability	385
Osmotic Relations in the Presence of Protein	386
Salt Antagonism	387
The Effect of Narcotics and Anesthetics Upon Permeability	388
The Effect of Physiological State Upon Permeability	389
Comparison of the Permeability of Different Kinds of Cells	389
Countertransport	390
Movement of Fluid into Cells by Hydrostatic Pressure	391

APPENDIX 391

17.1 The Staverman Reflection Coefficient	391
17.2 The Kedem-Katchalsky Equation for Movement of a Solvent and Solute Through a Cell Membrane	392

CHAPTER 18**METABOLICALLY COUPLED ACTIVE TRANSPORT** 395

Energy Involved in Active Transport	396
Comparison of Active Transport and Facilitated Diffusion	397
Direct Measurement of Active Transport	398
Examples of Active Transport	399
Carriers	401
Sugar Transport in Bacteria	402
Enzyme and Carrier Induction in Bacteria	403
Sugar Transport in Animal Cells	404
Applicability of the Michaelis-Menten Equation to Carrier Transport Kinetics	405
The Effect of Environment Upon Active Transport	406
Mechanism of Active Transport	406

CHAPTER 19**BULK TRANSPORT** 410

Endocytosis	410
Phagocytosis	410
Phagotrophy	415
Autophagy	416
Pinocytosis	416
Exocytosis	422
Summary	424

Section V

Excitability and Contractility 427

CHAPTER 20

ACTION POTENTIALS OF CELLS 428

The Nature of the Nerve Impulse 428

The Rate of Conduction of the Nerve Impulse 431

The Strength-Duration Relationship 433

Core Conductor Theory of the Nerve Impulse 434

Saltatory Conduction of the Nerve Impulse 436

Resting Metabolism of Nerve Cells 437

Activity Metabolism of Nerve Cells 437

Heat Production During Nerve Activity 438

Effects of Various Factors on Action Potentials of Nerve Cells 438

Action Potentials in Muscle Fibers 439

Action Potentials in Excitable Plant Cells 441

APPENDIX 442

20.1 Surface Recording of Action Potentials 442

CHAPTER 21

DEVELOPMENT, PROPAGATION, AND TRANSMISSION OF THE ACTION POTENTIAL 446

Resting Potentials Across the Cell Membrane 446

Origin of the Propagated Action Potential 453

Theory of the Propagation of the Action Potential 455

Sensory Fiber Action Potentials 458

Synaptic Transmission of Action Potentials 459

CHAPTER 22

CONTRACTILITY 468

Nonmuscular Movement 468

Muscular Movement 476

Fatigue 488

Development of Muscle Cells 490

CHAPTER 23

THE CHEMICAL BASIS OF CONTRACTILITY 493

Evidence of Molecular Orientation in Muscle Fibers 493

The Structural Proteins of Muscle Cells 496

Actomyosin 501

Source of Energy for Contraction 503

The Sliding Filament Mechanism of Muscular Contraction 505

Work and Heat Relations in Muscle Contraction 507

Excitation of Muscular Contraction 509

Relaxation of Muscle Cells 510

Mechanism of Contraction in Nonmuscular Cells 512

Summary of Nonmuscular Contraction 517

Section VI

Biological Rhythms 523**CHAPTER 24****TEMPORAL ORGANIZATION OF THE CELL** 525

Circadian Rhythms	525
Circadian Rhythms in Unicelled Organisms	527
Circadian Rhythms in Multicellular Organisms	529
Synchronization of Circadian Rhythms	532
Tidal Rhythms	536
Seasonal Circannual Rhythms	536
Circannual Rhythms in Multicellular Plants: Photoperiodism	536
Circannual Rhythms in Multicellular Animals:	
Photoperiodism	538
Factors Other Than Light Regulating Circannual Rhythms	540

Section VII

The Cell Cycle 545**CHAPTER 25****NORMAL AND ABNORMAL CELL GROWTH** 547

Growth Studies on Single Cells	547
Measuring Growth Rates of Cells	549
Life Cycle of Cells	551
Growth of Cells in Tissue Culture	553
Cell Aging	555
Growth of Cancer Cells	555
Vascularization of Tumors	559
Regulation of Form and Size in Cells	560
Unbalanced Growth	561
Regulation of Growth	562

CHAPTER 26**CELL DIVISION** 566

Time Span of the Cell Cycle	566
Synchronized Cell Division	567
Methods for Synchronizing Cell Division	570
DNA Synthesis in the Eukaryotic Cell Cycle	572
DNA Synthesis in the Prokaryotic Cell Cycle	573
RNA Synthesis During the Cell Cycle	574
Protein Synthesis During the Cell Cycle	575
Source of Energy for Cell Division	576
Initiation of Cell Division	577
Cytokinesis in Animal Cells	581
Cytokinesis in Plant and Bacterial Cells	582
Cell Surface Changes During Cytokinesis	584
Summary	585

CHAPTER 27

ACCELERATING, RETARDING, AND BLOCKING CELL DIVISION 591

Acceleration of Cell Division 591

Retardation of Cell Division 592

Means of Blocking Cell Division 594

The Threat to Life from an Increased Radiation Load on Earth 602

Index 611
