<i>Chapter 1. Introduction</i>	228
<i>Chapter 2. The cellulosic ion exchangers</i>	233
2.1. Properties of various types of adsorbent	233
2.1.1. Standard 'fibrous' forms	241
2.1.2. Microgranular forms	241
2.1.3. Ion-exchange gels	243
2.2. Evaluation of cellulosic ion exchangers	245
2.2.1. Variations in DEAE-cellulose	246
2.2.2. Measurement of capacity for adsorbing poly-electrolytes	249
2.2.3. Titration of cellulosic ion exchangers	253
<i>Chapter 3. Adsorption and desorption</i>	255
3.1. Tight-adsorption and finite-adsorption equilibrium	255
3.2. Gradient elution	258
3.3. Stepwise elution	262
3.4. The effect of molecular size	265
3.5. The effect of pH	269
<i>Chapter 4. Choice of conditions for first trial</i>	271
4.1. General considerations	271
4.2. Choice of adsorbent	273
4.3. Choice of particle size	279
4.4. Choice of buffer	281

<i>Chapter 5. Preparation of adsorbents for use</i>	287
5.1. Washing	287
5.2. Removal of fines	290
5.3. Adjustment of the adsorbent to the desired pH	292
5.3.1. DEAE-cellulose	294
5.3.2. CM-cellulose	295
5.3.3. P-cellulose	295
5.3.4. ECTEOLA-cellulose	296
5.3.5. SE-cellulose	296
 <i>Chapter 6. Packing the column</i>	 297
6.1. Columns	297
6.2. Packing under air pressure	299
6.3. The surface of the adsorbent bed	308
6.4. Bed volume	313
 <i>Chapter 7. Preparation and application of the sample to the column</i>	315
7.1. Quantity of sample to be applied	315
7.2. Preparation of the sample for chromatography	315
7.2.1. Dialysis	318
7.2.2. Gel filtration	310
7.2.3. Reduction of the salt concentration by dilution	327
7.2.4. Removal of insoluble material	322
7.3. Application of sample	322
7.3.1. Application to a 'free-surface' bed	322
7.3.2. Application to a completely filled column	329
 <i>Chapter 8. Elution</i>	 327
8.1. Elution of unadsorbed components	327
8.2. Gradient elution	327
8.2.1. Convex gradients; constant volume mixer	328
8.2.2. Linear gradient mixer	330
8.2.3. Compound gradients	334
8.2.4. Concave gradients	341
8.2.5. Gradient pumps	342
8.3. Stepwise elution	343
8.4. Temperature	344
8.5. Flow rate	345

8.5.1. Flow induced by constant pressure	347
8.5.2. Flow induced by pumps	348
8.6. Collection of the fractions	351

Chapter 9. Examination of effluent fractions 355

9.1. Detection and measurement of eluted components	355
9.1.1. Non-specific methods	356
9.1.2. Radioactivity	359
9.1.3. Specific methods	360
9.2. Concentration and de-salting	364
9.2.1. Evaporation	364
9.2.2. Adsorption	365
9.2.3. Ultrafiltration	365
9.2.4. Water absorption	369
9.2.5. Precipitation	369
9.3. Re-chromatography	370
9.4. Measurement of pH and conductivity	373

Chapter 10. Some applications to biochemical problems 377

10.1. Descriptions of procedures	377
10.2. Examples	378

Appendix. Manufacturers and suppliers of cellulosic ion exchangers and columns 393
