

CONTENTS

1. Introduction to Composite Materials Testing	1
Laminate Orientation Codes	
Typical Experimental Data	
2. Test Methods Available for Use with Composite Materials	25
Influences of Material Orthotropy on Testing	
Stress-Strain Relations for Anisotropic Materials	
Engineering Constants for an Orthotropic Material	
Standards and Test Methods Available	
3. Static Testing of Composite Materials	38
Tensile Test Methods	
Compression Test Methods	
Flexure Test Methods	
Shear Test Methods	
Biaxial Loading Test Methods	
Fracture Toughness Test Methods	
4. Fatigue, Impact and Creep Testing	117
Dynamic (High Rate Loading) Properties	
Fatigue	
Impact	
Creep	
5. Test Specimen Preparation and Quality Control Inspection	137
6. Types of Testing Equipment Available	143
7. Use of Special Fixtures and Strain Measurement Devices	144
8. Automated Data Reduction, Plotting, and Retrieval Methods	145
9. Physical Properties Testing of Composites	155
Fiber and Void Volumes	
Thermal Expansion	
Moisture Expansion	
10. Testing of Fibers and Matrix Materials	166
Fiber Properties Testing	
Matrix Properties Testing
