

Contents

Preface	vii
Acknowledgments	ix
Introduction	xi
Pretest	1
Part I Information, Proteins, and Enzymes	
1 Deoxyribonucleic Acid (DNA): The Genetic Material	17
2 Replication of DNA	25
3 Transcription of DNA	35
4 The Genetic Code	41
5 Protein Synthesis	47
6 Regulation of Gene Expression in Prokaryotes	59
7 Gene Structure and Replication in Eukaryotic Cells	67
8 Protein Structure	81
9 Structure–Function Relationships in Proteins	99
10 Enzymes	119
Part II Metabolism	
11 Introduction to Metabolism	137
12 Carbohydrate Chemistry	147
✓ 13 Gluconeogenesis	155
✓ 14 Glycolysis	165
✓ 15 Tricarboxylic Acid (TCA) Cycle	175

16	Mitochondrial Electron Transport Chain	187
17	Oxidative Phosphorylation	195
18	Glycogen Metabolism	205
19	Alternate Pathways of Carbohydrate Metabolism	213
20	Fatty Acid and Acylglyceride Metabolism	229
21	Phosphoglycerides and Sphingolipids: Structures and Metabolism	247
22	Prostaglandins and Related Compounds	259
23	Cholesterol Metabolism	267
24	Digestion, Absorption, and Transport of Lipids	281
25	Membrane Structure and Function	289
26	Protein Turnover	297
27	Amino Acid Degradation	305
28	Amino Acids as Precursors of Biologically Important Compounds	329
29	Nucleotide Turnover	347
30	Hormones	371
31	Vitamins	381
32	Integration of Metabolism	395
	Appendix: Water and Acid-Base Equilibria	405
	Post-test	415
	Index	431
