

CONTENTS

PREFACE	iii
INTRODUCTION	vii
Chapter 1: BASIC CONCEPTS	1
1.1. Introduction	1
1.2. What is Rheology?	1
1.3. Cause and Effect	4
1.4. Assumptions and Restrictions	5
1.5. Simple Shear	7
1.6. Classification of Materials	9
1.7. Mechanics and Newton's Laws	12
1.8. Rheology and Fluid Mechanics	13
1.9. The Concept of Tensors	14
1.10. Stress and Deformation	21
1.10.1. Stress	21
1.10.2. Classical Strain	23
1.10.3. Isotropic and Anisotropic Stress and Strain	32
1.11. Material Properties	41
Problems	45
Notes	48
Chapter 2: MATERIAL RESPONSE	51
2.1. Introduction	51
2.2. Purely Viscous Fluids	52
2.2.1. Newtonian Fluids	54
2.2.2. Volumetric Properties	56
2.2.3. Generalized Newtonian (Non-Newtonian) Fluids	60

2.3.	Purely Elastic Solids	71
2.4.	Linear Viscoelastic Materials	76
2.4.1.	Relative Response of Viscous, Elastic, and Viscoelastic Materials	77
2.4.2.	Rate or Derivative Models	82
2.4.3.	Linear Viscoelastic Material Functions	102
2.4.4.	Restrictions of Linearity	135
2.5.	Normal Stress Effects	137
2.5.1.	Normal Stress Material Functions	141
2.6.	Combined Behavior	144
	Problems	145
	Notes	153
Chapter 3:	MECHANICS AND CONSERVATION PRINCIPLES	155
3.1.	Introduction	155
3.2.	Stress and Momentum	156
3.2.1.	Concentration of Force	156
3.2.2.	Momentum Flux	158
3.3.	Equations of Motion	168
3.3.1.	Time Derivatives	169
3.3.2.	Conservation of Mass	173
3.3.3.	Conservation of Momentum	178
3.4.	Kinematics of Viscous Fluids	182
3.4.1.	Rate of Strain	184
3.4.2.	Purely Viscous Fluids	188
3.4.3.	Vorticity	197
	Problems	202
	Notes	205
Chapter 4:	SOLUTION OF FLOW PROBLEMS	207
4.1.	Introduction	207
4.2.	General Procedure for Analyzing Flow Problems	207
4.3.	Steady Flow of Viscous Fluids	211
4.3.1.	Poiseuille Flow	212
4.3.2.	Couette Flow	229
4.4.	Viscoelastic Fluids in Small Deformation Time-Dependent Flows	240
4.4.1.	Wave Propagation	242
4.4.2.	Unsteady Response in Simple Shear	251
4.4.3.	Oscillatory Flow in a Tube	258
4.5.	Normal Stress Effects in Tube Flow	262
4.5.1.	Axial Thrust and Extra Pressure	264
	Problems	269
	Notes	275

Chapter 5:	VISCOMETRY AND RHEOGONIOMETRY	277
5.1.	Introduction	277
5.2.	Measured Versus Fundamental Variables	277
5.3.	Viscometric Flows	280
5.4.	Viscometry	283
5.4.1.	Poiseuille Flow	283
5.4.2.	Couette Flow	296
5.4.3.	Cone and Plate	315
5.4.4.	Disc and Plate	320
5.5.	Rheogoniometry	326
5.5.1.	Cone and Plate	327
5.5.2.	Disc and Plate	335
5.5.3.	Concentric Cylinders	341
5.5.4.	Slits and Capillaries	345
5.6.	Time-Dependent Material Functions	353
5.6.1.	Forced Oscillatory Testing-- Negligible Inertia	354
5.6.2.	Forced Oscillatory Testing--Sample Inertia Considered	366
	Problems	386
	Notes	393
Chapter 6:	GENERALIZATION PRINCIPLES	395
6.1.	Introduction	395
6.2.	Principle of Material Indifference	395
6.3.	Vectors	397
6.3.1.	Summation Convention	399
6.3.2.	Scalar and Vector Products	400
6.3.3.	Base Vectors	404
6.3.4.	Reciprocal Base Vectors	406
6.3.5.	Covariant and Contravariant Vector Components	410
6.3.6.	Metric and Conjugate Tensors	410
6.4.	Coordinate Transformations	417
6.4.1.	Transformation Relations	418
6.4.2.	The Metric Tensor	424
6.5.	Tensor Relations	429
6.5.1.	Contravariant, Covariant, and Mixed Tensors	429
6.5.2.	Conservation of Indices	431
6.5.3.	Tensor Multiplication	433
6.6.	Tensor and Physical Components	435
6.6.1.	The Conjugate Tensor	436
6.6.2.	Raising and Lowering of Indices	437
6.6.3.	Physical Components	438

6.7.	Differentiation of Tensors	441
6.7.1.	The Covariant Derivative	443
6.7.2.	Christoffel Symbols	444
6.8.	Tensor Forms of Vector Notation	448
6.9.	Some Specific Properties of Second-Order Tensors	451
6.9.1.	Invariants	452
6.9.2.	Dual Vector of Antisymmetric Tensor	458
6.9.3.	Generalized Unit Tensor	460
6.9.4.	Generalized Permutation Symbol and Kronecker Delta	461
	Problems	463
Chapter 7:	GENERALIZED FLUID RESPONSE	471
7.1.	Introduction	471
7.2.	Purely Viscous Fluids	472
7.2.1.	Newtonian Fluids	472
7.2.2.	Generalized Newtonian Fluids	473
7.2.3.	Stokesian Fluids	474
7.3.	Deformation of Time-Dependent Fluids	485
7.3.1.	Convected Coordinates	487
7.3.2.	Deformation in Convected Coordinates	491
7.3.3.	Finite Deformation Relative to Fixed Coordinates	493
7.3.4.	Deformation Rate--The Convected Derivative	504
7.3.5.	Other "Convected" Time Derivatives	510
7.4.	Viscoelastic Fluid Models	513
7.4.1.	Rate or Derivative Models	515
7.4.2.	Integral or Hereditary Models	529
7.5.	Closure	547
	Problems	548
	Notes	553
NOTATION		555
Appendix A:	A SHORT TABLE OF LAPLACE TRANSFORM PAIRS	571
Appendix B:	GENERALIZED DERIVATION OF CONSERVATION EQUATIONS	577
Appendix C:	SOME ORTHOGONAL COORDINATE SYSTEMS	583
Appendix D:	SPECIFIC COMPONENTS OF SOME FREQUENTLY ENCOUNTERED QUANTITIES	591
Appendix E:	SPECIAL RELATIONS FOR VISCOMETRIC FLOW	611
