

Table of Contents

A. Approaches to and Definitions of the Mechanisms of Action of Herbicides	1
I. Applications, Morphological, Physiological, and Biochemical Mechanisms of Herbicides	1
II. Basic, Intermediate, and Secondary Plant Metabolism	4
III. Supercomplex, Complex, and Defined Systems	5
IV. Kinetics and Dose-Response Curves	7
V. The Chain of Effects	11
VI. Mobility and Selectivity of Herbicides	12
References for A	13
B. Plant Metabolism – a Synopsis of Principles	15
I. Plant Growth as an Open System	15
II. Cellular Organelles and Endomembrane Systems	16
References for B	18
C. Photosynthesis	19
I. Physiology and Biochemistry of Photosynthesis	19
II. Flow of Electrons in Photosynthesis	21
III. Inhibition of Photosynthetic Electron Flow	23
1. Action on the Isolated Chloroplast	23
2. Herbicides Inhibiting at the "Diuron Site"	24
a. General Aspects	24
b. Urea Herbicides	25
c. Carboxanilides	33
d. <i>s</i> -Triazine Herbicides	35
e. <i>as</i> -Triazinone Herbicides	41
f. Uracile Herbicides	43
g. Biscarbamates	44
h. Pyridazinone Herbicides	46
i. Hydroxybenzonitriles	47
k. Nitrophenols	48
l. Benzimidazole Herbicides	49
IV. Unclassified and Quinoid Photosynthesis-Inhibiting Herbicides	50

V. Binding at the "Diuron Site"	51
1. Native Binding.	51
2. Herbicide-Insensitive Electron Transport.	53
a. Trypsin Treatment	54
b. Cerulenin Treatment	55
c. Resistance by Mutation	55
3. Models of the Binding Site	58
VI. Light Excitation of Photosynthetic Pigments and Photosynthetic Oxygen Reduction	60
VII. Toxicity after Inhibition of Photosystem II	64
1. General	64
2. Physiological Conditions Influencing the Appearance of Damage	65
3. Ultrastructural Damage	66
4. Possible Toxicants	66
a. Energy Availability.	66
b. Nitrite	66
c. Radicals and Activated Oxygen Species	68
VIII. Physiological Effects Induced by Herbicides that Inhibit Photosynthesis	70
1. General	70
2. Regulatory Responses after Partial Inhibition of Photosynthesis	71
3. Hormone-Like Effects of <i>s</i> -Triazine Herbicides	76
References for C. I-VIII	78
IX. Herbicides Accepting Electrons from the Photosynthetic Pigment System I.	86
1. Interference with Photosynthetic and Other Electron-Transport Systems	86
2. Physiology of Action and Selectivity	88
3. Sequence of Effects and Generation of Phytotoxicity	89
References for C. IX	91
X. Diphenyl Ether Herbicides	92
1. General Aspects	92
2. The Light-Dependent Herbicidal Action	92
3. Influence of Diphenyl Ether Herbicides on Photosynthesis and Respiration	96
4. Credazine	98
References for C. X	98
XI. Herbicides Interfering with Carotenoid Biosynthesis	99
1. Herbicidal Structures Interfering with Carotenoid Biosynthesis	99
2. Physiological and Biochemical Changes in Treated Plants	99
a. Carotenoid Biosynthesis	99
b. Carotenoids in Herbicide-Treated Plants	101
c. The Influence of Light	103
d. The Generation of Phytotoxicity	105
e. Microbody Relations.	106

3. Special Aspects of Individual Herbicides Inhibiting Carotenoid Biosynthesis	107
a. Aminotriazole	107
b. Fluometuron	108
c. Pyridazinones	108
d. Haloxydine and Pyriclor	111
e. Others	111
References for C. XI	111
D. Energy Conservation	114
I. Energy Conservation in Photosynthesis and Respiration	114
II. Uncouplers of Oxidative Phosphorylation	115
III. Respiratory Uncoupling in the Intact Tissue	117
IV. Dichlobenil – an Inhibitor of Cellulose Biosynthesis	118
References for D	119
E. Nucleic Acid and Protein Synthesis	120
References for E.	122
F. Microtubules	123
I. Microtubules in the Cell Cycle of Higher Plants	123
II. Flagella, Cilia, and Other Microtubular Systems	125
III. Formation of Microtubules.	126
IV. Morphological and Cytological Effects Induced by Herbicides and Other Compounds Interfering with Microtubular Systems	128
V. Herbicide Interference with Microtubular Systems	130
1. Dinitroanilines	130
2. Carbamates	133
3. Phosphoric Amides	134
4. Other Herbicides and Additional Compounds Interfering with Microtubules	134
5. Calcium Pumps	135
VI. Metabolic Effects of Antimitotic Herbicides	136
1. Dinitroaniline Herbicides	136
2. Carbamates	137
References for F.	138
G. Lipid Metabolism	142
I. Inhibition of Germination by Thiolcarbamate Herbicides	142
II. Interference of Thiolcarbamates with Fatty Acid and Wax Formation	142
III. Possible Mode of Herbicidal Action	144
IV. Interference of Thiolcarbamate Herbicides with Photosynthetic and Respiratory Systems.	145

V. Inhibition of Lipid Synthesis by Herbicides Other than Thiolcarbamates	146
References for G	146
H. Herbicidal Germination Inhibitors with Unknown Mode of Action	148
I. Metabolic Pathways Involved in the Germination and Growth of Seedlings as a Target for Herbicidal Action.	148
II. Germination-Inhibiting Herbicides with Unknown Primary Bio- chemical Mode of Action	150
1. α -Chloroacetamides.	150
a. Analysis of the Growth of Plants and Tissues Treated with α -Chloroacetamides	150
b. Effects of α -Chloroacetamides on Cellular Metabolism	154
2. Other Germination-Inhibiting Herbicides	155
References for H	157
I. Herbicides with Auxin Activity	159
I. Tests for Auxin Activity	159
II. Structural Requirements for Auxin Activity.	161
III. Auxin Interaction with Other Plant Hormones	164
1. Interaction with Cytokinins	164
2. Interaction with Ethylene	164
3. Auxins and Oxidases/Peroxidases	165
IV. Auxins and Nucleic Acid Synthesis	166
V. Auxin-Binding Proteins	167
VI. Sublethal Effects on Intact Growing Plants	169
VII. Effects on Basic Plant Metabolism	169
VIII. Selectivity	170
IX. Phytotoxicity	172
References for I	173
K. Auxin-Inhibitor Herbicides	177
I. Structural Requirements	177
II. Degradation and Selectivity	179
III. Inhibition of Auxin-Dependent Systems	181
IV. General Metabolic Effects and Phytotoxicity	182
References for K	183
L. Aromatic Amino Acid Biosynthesis	184
I. Primary Mode of Action and Regulatory Responses	184
II. Interference of Glyphosate and Glyphosine with Other Metabolic Reactions	187
III. Phytotoxicity from Glyphosate	187
References for L.	188

M. Other Herbicides and Mechanisms. 190

 I. Competition with Nitrate 190

 II. Mefluidide 191

References for M 191

Subject Index 193
