Preface	v
Abbreviations of virus and viroid names	ix
CHAPTER 1. WHY STUDY THE BIOCHEMISTRY OF VIRUS-INFECTED PLANTS?	
1.1. Introduction: viruses as pathogens and 'pets'	1
1.2. Interactions of viruses with host plants	7
CHAPTER 2. THE ROLE OF THE PLANT IN VIRUS REPLICATION	
2.1. Introduction	13
2.2. The initiation of infection	15
2.3. Translation	20
2.4. Transcription	22
2.5. Assembly and after	36
2.6. Conclusion	41
CHAPTER 3. EFFECTS OF VIRUS INFECTION ON HOST NUCLEIC ACID METABOLISM	
3.1. DNA	43
3.2. RNA	46
3.3. Conclusion	56
CHAPTER 4. VIRUS INFECTION AND HOST PROTEIN METABOLISM	
4.1. Different approaches to host protein metabolism	57
4.2. Gross changes in protein metabolism	58
4.3. Electrophoretic analysis of protein changes after infection	62
4.4. Changes in enzymes or proteins with known functions	66
4.5. Pathogenesis-related proteins	71
4.6. Amino acid and nitrogen metabolism	81
4.7. Conclusion	83
CHAPTER 5. RESPIRATION AND PHOTOSYNTHESIS IN THE VIRUS-INFECTED PLANT	
5.1. Respiration	85
5.2. Photosynthesis	86
5.3. Assimilate partition and carbon balance	98
5.4. Conclusion	100

CHAPTER 6. THE BIOCHEMISTRY OF RESISTANCE TO VIRUSES

6.1. Basic concepts in resistance studies	103
6.2. Biochemical mechanisms in non-host immunity	110
6.3. Genetically controlled resistance to transmission, and disease avoidance	116
6.4. Genetically controlled resistance: mechanisms operating within the plant	117
6.5. The biochemistry of virulence	144
6.6. Induced resistance	152
6.7. Conclusion	168

**CHAPTER 7. HOW DO VIRUSES CONTROL PLANT GROWTH AND DEVELOPMENT,
AND CAUSE SYMPTOMS?**

7.1. Introduction: effects of viruses on plant growth and development	171
7.2. Control of growth	173
7.3. How symptoms are formed	190
7.4. Conclusion	203

**CHAPTER 8. VIRUSES AND PLANT BIOCHEMISTRY:
PROGRESS AND PREDICTIONS**

205
