

## Contents

	Preface	v
	Introduction	xi
I.	Fibrous Materials	
	by Ludwig Rebenfeld	1
II.	Mechanism of Liquid Flow and Structure Property Relationships	
	by Pronoy K. Chatterjee and Hien V. Nguyen	29
III.	Surface Tension and Surface Energy	
	by Anthony M. Schwartz	85
IV.	Experimental Aspects of Fiber Wetting and Liquid Movement between Fibers	
	by Bernard Miller	121
V.	The Role of Surfactants	
	by John C. Berg	149
VI.	Synthetic and Natural Polymers	
	by Chyi-Cheng Chen, Jayson C. Vassallo and Pronoy K. Chatterjee	197
VII.	Cross-linked Cellulose and Cellulose Derivatives	
	by Raymond A. Young	217
VIII.	Polymer Grafted Cellulose and Starch	
	by V.T. Stannett, G. Fanta and W.M. Doane	257
IX.	The Role of Nonwoven Materials	
	by D.K. Smith	281
X.	Technology Perspectives	
	by Robert F. Schwenker, Jr. and D.F. Durso	313
	<i>Subject index</i>	329
