

Contents

<i>Preface</i>	iii
1. Introduction	1
I. Physical Characteristics of Activated Carbons	2
II. Future of Activated Carbon Studies	5
References	8
2. Activation of Carbon	9
I. Starting Materials	11
II. "Activation" and Oxidation of Carbon	13
III. Reaction of Carbon with Oxygen	14
IV. High-Temperature Reaction of Carbon with CO_2	20
V. Reactions of Carbon with Steam	22
VI. Summary	23
References	23
3. Surface Oxygen Functional Groups and Neutralization of Base by Acidic Surface Oxides	25
I. Chemisorption of Oxygen on Carbon	26
II. Physical and Chemical Properties of Activated Carbon Attributable to Surface Oxides	28
III. Surface Oxides That Can Be Removed as CO , CO_2 , and H_2O	30

IV. "Geography" of the Surface Oxides	37
V. Variation among Sample Materials	38
VI. Determination of Oxygen-Containing Surface Functional Groups by Indirect Methods	39
VII. Specific Chemical Identification of Surface Oxygen Functional Groups	46
VIII. Direct Identification of Surface Functional Groups by Infrared Spectroscopy	53
IX. Summary	84
References	84
 4. Spectroscopic Methods for Molecular Structure Determinations on the Surfaces of Activated Carbons	 87
I. Infrared Spectroscopy	88
II. Electron Spin Resonance Spectroscopy	112
III. Nuclear Magnetic Resonance Spectroscopy	114
References	116
 5. Nature of the Electrical Double Layer	 119
I. Definitions	120
II. Qualitative Model of the Electrical Double Layer	120
III. Distribution of Potential across the Double Layer	124
IV. Summary	126
References	126
 6. Adsorption of Electrolytes	 129
I. Adsorption of Acid	129
II. Electrochemical Mechanism of Acid Neutralization by Active Carbon	142
III. Competitive Adsorption of Organics with Acids	144
IV. Some Additional Corroboration of the Quality of the Proton "Adsorption" Mechanism	147
V. The Chromene-Carbonium Ion Mechanism of Garten and Weiss	148
VI. Other Carbonium Ion Mechanisms for Acid Adsorption	152
VII. Measurements of Carbonium Ions on Carbon Surfaces	153
VIII. Summary	156
References	156
 7. Adsorption of Weak and Nonelectrolytes from Aqueous Solution	 159
I. Adsorptive Processes	159
II. Rate of Adsorption of Nonelectrolytes	163
III. Traube's Rule	167
IV. Adsorption of Soaps and Aliphatic Acids from Solution	173
V. Adsorption of Carbohydrates and Amino Acids from Aqueous Solution	179

CONTENTS

vii

VI. Effect of pH on Adsorption of Methylene Blue	181
VII. Adsorption of Weak Aromatic Electrolytes and Effects of Substitution on Adsorption Capacities and Rates	186
VIII. Adsorption of Undissociated Aromatic Compounds from Dilute Aqueous Solutions	209
IX. Adsorption from Liquid Mixtures at Active Carbon Surfaces	222
References	226
<i>Author Index</i>	229
<i>Subject Index</i>	235
