## CONTENTS

---

Foreword	ix	
Preface	xI	
<b>1</b>	<b>Sorting and Searching</b>	<b>1</b>
Sorting	1	
Searching	25	
<b>2</b>	<b>Queues, Stacks, Linked Lists, and Binary Trees</b>	<b>29</b>
Queues	30	
Stacks	38	
Linked Lists	43	
Binary Trees	59	
<b>3</b>	<b>Dynamic Allocation</b>	<b>67</b>
The Turbo C Dynamic Allocation System	68	
Sparse Array Processing	71	

The Linked-List Sparse Array	72
The Binary Tree Approach to Sparse Arrays	75
The Pointer Array Approach to Sparse Arrays	78
Hashing	82
Choosing an Approach	87
Reusable Buffers	88
The "Unknown Memory Dilemma"	90
Fragmentation	97

## **4 Using System Resources** **99**

The 8086 Family of Processors	100
The 8086 Interrupts and PC-DOS	100
Accessing System Resources in the ROM-BIOS	103
Using DOS to Access System Functions	115
Final Thoughts on Using System Resources	119

## **5 Interfacing to Assembly Language Routines** **121**

Calling Conventions	123
Creating an Assembly Code Function	124
Using <code>asm</code>	132
When to Code in Assembler	134

## **6 Graphics** **137**

Modes and Palettes	138
Writing Pixels	139
Drawing Lines	143
Drawing and Filling Boxes	148
Drawing Circles	150
Putting It All Together	152

## **7 Statistics** **165**

Samples, Populations, Distributions, and Variables	166
The Basic Statistics	168
Simple Plotting on the Screen	175
Projections and the Regression Equation	180
Making a Complete Statistics Program	186
Using the Statistics Program	197
Final Thoughts	200

<b>8</b>	<b>Codes and Data Compression</b>	<b>201</b>
	A Short History of Cryptography 202	
	Substitution Ciphers 204	
	Transposition Ciphers 212	
	Bit-Manipulation Ciphers 217	
	Data Compression 222	
	The 16-Character Language 226	
	Code-Breaking 230	
<b>9</b>	<b>Random Number Generators and Simulations</b>	<b>235</b>
	Random Number Generators 236	
	Determining the Quality of a Generator 239	
	Using Multiple Generators 248	
	Simulations 253	
	Random-Walk Portfolio Management 264	
<b>10</b>	<b>Expression Parsing and Evaluation</b>	<b>269</b>
	Expressions 270	
	Dissecting an Expression 272	
	Expression Parsing 274	
	A Simple Expression Parser 276	
	Adding Variables to the Parser 281	
	Syntax Checking in a Recursive Descent Parser 288	
<b>11</b>	<b>Converting Turbo Pascal to Turbo C</b>	<b>291</b>
	Structured, but Different 292	
	An Identifier Comparison Between Turbo Pascal and Turbo C 294	
	Converting Turbo Pascal Loops into C Loops 297	
	The <i>case</i> and <i>if</i> Statements 298	
	Records Versus Structures 299	
	A Sample Translation 300	
	Using the Computer to Help Convert Turbo Pascal to C 302	
	Final Thoughts on Translating 310	

<b>12</b>	<b>Efficiency, Porting, and Debugging</b>	<b>311</b>
	Efficiency      311	
	Porting Programs      320	
	Debugging      323	
	General Debugging Theory      332	
	The Art of Program Maintenance      334	
<b>A</b>	<b>Turbo C Memory Models</b>	<b>337</b>
	The 8086 Family of Processors      338	
	16-Bit Versus 32-Bit Pointers      340	
	Memory Models      341	
	Overriding a Memory Model      343	
<b>B</b>	<b>A Review of Turbo C</b>	<b>347</b>
	The Origins of C      347	
	C as a Structured Language      348	
	A Review of Turbo C      350	
	Variables—Types and Declaration      350	
	Operators      356	
	Functions      365	
	Statement Summary      370	
	The Turbo C Preprocessor      382	
	The Turbo C Standard Library      385	
	<b>Index</b>	<b>389</b>
