<i>Introduction</i>	xxi
1. PARTICULATE SOLIDS	1
1.1. Introduction	1
1.2. Particle characterisation	2
1.2.1. Single particles	2
1.2.2. Measuring techniques	3
1.2.3. Particle size distribution	8
1.2.4. Mean particle size	9
1.3. Particulate solids in bulk	12
1.3.1. General characteristics	12
1.3.2. Agglomeration	13
1.3.3. Resistance to shear and tensile forces	14
1.3.4. Angles of repose and friction	14
1.3.5. Flow of solids in hoppers	16
1.3.6. Flow of solids through orifices	17
1.3.7. Conveying of solids	17
1.3.8. Measurement and control of solids flowrate	18
1.4. Blending of solid particles	19
1.4.1. The degree of mixing	20
1.4.2. The rate of mixing	21
1.5. Classification of solid particles	25
1.5.1. Introduction	25
1.5.2. Gravity settling	27
1.5.3. Centrifugal separators	35
1.5.4. Sieves or screens	36
1.5.5. Magnetic separators	39
1.5.6. Electrostatic separators	41
1.5.7. Flotation	41
1.6. Further reading	46
1.7. References	46
1.8. Nomenclature	47
2. SIZE REDUCTION OF SOLIDS	48
2.1. Introduction	48
2.2. Mechanism of size reduction	48
2.3. Energy for size reduction	50
2.3.1. Energy utilisation	51
2.4. Methods of operating crushers	53
2.5. Nature of the material to be crushed	54

2.6. Types of crushing equipment	55
2.6.1. Coarse crushers	56
2.6.2. Intermediate crushers	59
2.6.3. Fine crushers	67
2.6.4. Vibration mills	80
2.6.5. Colloid mills	81
2.6.6. Fluid energy mills	82
2.7. Further reading	84
2.8. References	84
2.9. Nomenclature	84
 3. MOTION OF PARTICLES IN A FLUID	 86
3.1. Introduction	86
3.2. Flow past a cylinder	86
3.3. The drag force on a spherical particle	89
3.3.1. Total force on the particle	93
3.3.2. Effect of motion of the fluid	95
3.3.3. Terminal falling velocities	96
3.4. Non-spherical particles	100
3.4.1. Effect of shape and orientation on drag	100
3.4.2. Terminal falling velocities	101
3.5. Motion of bubbles and drops	103
3.6. Accelerating motion of a particle in the gravitational field	104
3.6.1. Motion of a particle (form drag negligible)	106
3.6.2. Unidimensional motion in the absence of gravitation	108
3.6.3. Vertical motion of a particle	111
3.7. Motion of particles in a centrifugal field	119
3.8. Further reading	122
3.9. References	122
3.10. Nomenclature	123
 4. FLOW OF FLUIDS THROUGH GRANULAR BEDS AND PACKED COLUMNS	 125
4.1. Introduction	125
4.2. Flow of a single fluid through a granular bed	125
4.2.1. Darcy's law and permeability	125
4.2.2. Specific surface and voidage	126
4.2.3. General expressions for flow through beds in terms of Carman-Kozeny equations	128
4.2.4. Molecular flow	136
4.3. Dispersion	136
4.4. Heat transfer in packed beds	142
4.5. Packed columns	143
4.5.1. General description	144
4.5.2. Packings	146
4.5.3. Fluid flow in packed columns	152
4.6. Further reading	168
4.7. References	168
4.8. Nomenclature	170
 5. SEDIMENTATION	 172
5.1. Introduction	172
5.2. Gravitational sedimentation	172
5.2.1. Fine suspensions	172
5.2.2. Coarse suspensions	179

5.2.3. Solids flux in batch sedimentation	184
5.2.4. The Kynch theory of sedimentation	185
5.2.5. Comparison of sedimentation with flow through fixed beds	189
5.2.6. Model experiments	191
5.2.7. Sedimentation of two-component mixtures	193
5.2.8. The thickener	197
5.3. Centrifugal separation	203
5.3.1. Introduction	203
5.3.2. Behaviour of liquid in centrifuge basket	203
5.3.3. Fluid pressure	204
5.3.4. Sedimentation in a centrifugal field	205
5.3.5. Separation of two immiscible liquids	207
5.3.6. Centrifugal equipment	209
5.4. Flocculation	219
5.4.1. Introduction	219
5.4.2. The electrical double-layer	219
5.4.3. Interactions between particles	220
5.4.4. Coagulation concentrations	222
5.4.5. Kinetics of coagulation	223
5.4.6. Effect of polymers on stability	224
5.4.7. Effect of flocculation on sedimentation	225
5.5. Further reading	225
5.6. References	225
5.7. Nomenclature	227

6. FLUIDISATION

230

6.1. Characteristics of fluidised systems	230
6.1.1. Properties of gas-solid and liquid-solid systems	230
6.1.2. Effect of fluid velocity on pressure gradient	232
6.1.3. Minimum fluidising velocity	233
6.2. Liquid-solid systems	236
6.2.1. Bed expansion	236
6.2.2. Liquid and solid mixing	239
6.3. Gas-solid systems	241
6.3.1. Bed characteristics	241
6.3.2. Properties of bubbles in the bed	242
6.3.3. Gas and solid mixing	246
6.3.4. Transfer between continuous and bubble phases	248
6.3.5. Beds of particles of mixed sizes	249
6.4. Heat transfer to a boundary surface	250
6.4.1. Mechanisms involved	250
6.4.2. Liquid-solid systems	251
6.4.3. Gas-solid systems	255
6.5. Mass and heat transfer between fluid and particles	258
6.5.1. Introduction	258
6.5.2. Mass transfer between fluid and particles	259
6.5.3. Heat transfer between fluid and particles	262
6.5.4. Analysis of results for heat and mass transfer to particles	264
6.6. Summary of the properties of fluidised beds	268
6.7. Applications of the fluidised solids technique	270
6.7.1. General	270
6.7.2. Fluidised bed catalytic cracking	270
6.7.3. Applications in the chemical industry	271
6.7.4. Fluidised bed combustion	272
6.8. Further reading	274
6.9. References	274
6.10. Nomenclature	277

7. PNEUMATIC AND HYDRAULIC CONVEYING	279
7.1. Introduction	279
7.2. Pneumatic conveying	280
7.2.1. Vertical transport	280
7.2.2. Horizontal transport	280
7.3. Hydraulic conveying	288
7.3.1. Homogeneous flow	289
7.3.2. Horizontal transport of settling suspensions	292
7.3.3. Vertical transport	295
7.3.4. Industrial applications of hydraulic transport	296
7.4. Further reading	298
7.5. References	298
7.6. Nomenclature	299
 8. GAS CLEANING	 300
8.1. Introduction	300
8.2. Gas cleaning equipment	302
8.2.1. Gravity separators	302
8.2.2. Centrifugal separators	304
8.2.3. Inertia or momentum separators	309
8.2.4. Fabric filters	310
8.2.5. Electrostatic precipitators	313
8.2.6. Liquid washing	315
8.2.7. Agglomeration and coalescence	317
8.3. Further reading	320
8.4. References	320
8.5. Nomenclature	320
 9. FILTRATION	 321
9.1. Introduction	321
9.2. The theory of filtration	322
9.2.1. Relation between thickness of cake and volume of filtrate	324
9.2.2. Flow of liquid through the cloth	325
9.2.3. Flow of filtrate through the cloth and cake combined	326
9.2.4. Compressible filter cakes	327
9.3. Filtration practice	330
9.3.1. The filter medium	330
9.3.2. Blocking filtration	331
9.3.3. Effect of particle sedimentation on filtration	331
9.3.4. Delayed cake filtration	332
9.3.5. Preliminary treatment of slurries before filtration	333
9.3.6. Washing of the filter cake	334
9.4. Filtration equipment	335
9.4.1. Bed filters	336
9.4.2. Bag filters	337
9.4.3. The filter press	337
9.4.4. Leaf filters	344
9.4.5. Continuous rotary filters	351
9.4.6. Horizontal belt filters	357
9.4.7. Prayon continuous filter	359
9.4.8. Filter cartridges	359
9.5. Filtration in a centrifuge	362
9.6. Filtration calculations	365
9.7. Further reading	372
9.8. References	372
9.9. Nomenclature	373

10. LEACHING	375
10.1. Introduction	375
10.1.1. General principles	375
10.1.2. Factors influencing the rate of extraction	375
10.2. Mass transfer in leaching operations	376
10.3. Equipment for leaching	378
10.3.1. Processes involved	378
10.3.2. Extraction from cellular materials	379
10.3.3. Leaching of coarse solids	382
10.3.4. Leaching of fine solids	385
10.4. Countercurrent washing	387
10.5. Calculation of the number of stages for countercurrent washing	390
10.5.1. Batch processes	390
10.5.2. Countercurrent washing	391
10.5.3. Washing with variable underflow	393
10.6. Number of stages for countercurrent washing by graphical methods	398
10.6.1. Introduction	398
10.6.2. The use of right-angled triangular diagrams	400
10.6.3. Countercurrent systems	404
10.6.4. Non-ideal stages	408
10.7. Further reading	409
10.8. References	409
10.9. Nomenclature	410
 11. DISTILLATION	 411
11.1. Introduction	411
11.2. Vapour-liquid equilibrium	412
11.2.1. Partial vaporisation and partial condensation	413
11.2.2. Partial pressures, and Dalton's, Raoult's, and Henry's laws	414
11.2.3. Relative volatility	416
11.3. The methods of distillation—two component mixtures	418
11.3.1. Differential distillation	418
11.3.2. Flash or equilibrium distillation	419
11.3.3. Rectification	420
11.3.4. Batch distillation	421
11.4. The fractionating column	421
11.4.1. The fractionating process	421
11.4.2. Number of plates required in a distillation column	423
11.4.3. The importance of the reflux ratio	433
11.4.4. Location of feed point in a continuous still	439
11.4.5. Multiple feeds and sidestreams	439
11.5. Conditions for varying overflow non-ideal binary systems	441
11.5.1. The heat balance	441
11.5.2. Determination of the number of plates on $H-x$ diagram	446
11.5.3. Minimum reflux ratio	447
11.5.4. Multiple feeds and sidestreams	449
11.6. Batch distillation	451
11.6.1. The process	451
11.6.2. Operation at constant product composition	453
11.6.3. Operation at constant reflux ratio R	454
11.6.4. Batch or continuous distillation	458
11.7. Multicomponent mixtures	458
11.7.1. Equilibrium data	458
11.7.2. The feed and product compositions	460
11.7.3. Light and heavy key components	460
11.7.4. The calculation of the number of plates required for a given separation	461
11.7.5. Minimum reflux ratio	464

11.7.6. Number of plates at total reflux	473
11.7.7. Relation between reflux ratio and number of plates	473
11.8. Azeotropic and extractive distillation	474
11.8.1. Azeotropic distillation (ethanol-water)	475
11.8.2. Extractive distillation	476
11.9. Steam distillation	478
11.10. Plate columns	481
11.10.1. Types of trays	482
11.10.2. Factors determining column performance	483
11.10.3. Bubble cap trays. General design method	490
11.10.4. Sieve trays	497
11.10.5. Valve trays	502
11.10.6. Plate efficiency	505
11.11. Packed columns for distillation	512
11.11.1. Packings	512
11.11.2. Calculation of enrichment in packed columns	513
11.11.3. The method of transfer units	514
11.12. Further reading	523
11.13. References	523
11.14. Nomenclature	525
 12. ABSORPTION OF GASES	 529
12.1. Introduction	529
12.2. Conditions of equilibrium between liquid and gas	529
12.3. The mechanism of absorption	531
12.3.1. The two-film theory	531
12.3.2. Diffusion of a gas through a stagnant gas	532
12.3.3. Diffusion in the liquid phase	533
12.3.4. Rate of absorption	533
12.4. Application of mass transfer theories	536
12.5. Values of transfer coefficients	538
12.5.1. Wetted-wall columns	539
12.5.2. Coefficients in packed towers	542
12.5.3. Coefficients in spray towers	546
12.6. Absorption associated with chemical reaction	547
12.7. Absorption accompanied by the liberation of heat	552
12.8. Packed towers	553
12.8.1. Construction	554
12.8.2. Mass transport coefficients and specific area in packed towers	554
12.8.3. Capacity of packed towers	555
12.8.4. Height of column based on conditions in gas film	558
12.8.5. Height of column based on conditions in liquid film	559
12.8.6. Height based on overall coefficients	559
12.8.7. The operating line and graphical integration for height of columns	560
12.8.8. Capacity of tower in terms of partial pressures for high concentrations	563
12.8.9. The transfer unit	564
12.8.10. The importance of liquid and gas flowrates and the slope of the equilibrium curve	568
12.9. Plate towers	571
12.9.1. Number of plates by use of absorption factor	573
12.9.2. Tray types for absorption	575
12.10. Miscellaneous equipment	575
12.10.1. The use of vessels with agitators	575
12.10.2. The centrifugal absorber	578
12.10.3. Spray towers	579
12.11. Further reading	580
12.12. References	580
12.13. Nomenclature	582

13. LIQUID-LIQUID SYSTEMS

585

13.1. Introduction	585
13.2. The mixing of liquid-liquid systems	585
13.2.1. Propellers and turbines	585
13.2.2. Power consumption of agitators	590
13.2.3. Rate of mixing	596
13.3. Liquid-liquid extraction	598
13.3.1. Applications	598
13.3.2. Design considerations	599
13.3.3. Equilibrium conditions	601
13.4. Calculation of the number of theoretical stages in extraction operations	604
13.4.1. Co-current contact with partially miscible solvents	604
13.4.2. Co-current contact with immiscible solvents	605
13.4.3. Countercurrent contact with immiscible solvents	607
13.4.4. Countercurrent contact with partially miscible solvents	608
13.4.5. Continuous extraction in columns	610
13.5. Classification of extraction equipment	615
13.6. Stage-wise equipment for extraction	616
13.6.1. The mixer settler	616
13.6.2. Baffle-plate columns	619
13.6.3. The Scheibel column	620
13.7. Differential contact equipment for extraction	621
13.7.1. Spray columns	621
13.7.2. Packed columns	627
13.7.3. Rotary annular columns and rotary disc columns	630
13.7.4. Pulsed columns	630
13.7.5. Centrifugal extractors	632
13.8. Further reading	633
13.9. References	634
13.10. Nomenclature	635

14. EVAPORATION

637

14.1. Introduction	637
14.2. Heat transfer in evaporators	637
14.2.1. Heat transfer coefficients	637
14.2.2. Boiling at a submerged surface	639
14.2.3. Forced convection boiling	642
14.2.4. Vacuum operation	644
14.3. Multiple-effect evaporators	645
14.3.1. General principles	645
14.3.2. The calculation of multiple-effect systems	646
14.3.3. Comparison of forward and backward feeds	651
14.4. Improved efficiency in evaporators	655
14.4.1. Vapour compression evaporators	655
14.4.2. The heat pump cycle	659
14.5. Equipment for evaporation	662
14.5.1. Selection of evaporators	662
14.5.2. Evaporators with direct heating	662
14.5.3. Natural circulation evaporators	664
14.5.4. Forced circulation evaporators	669
14.5.5. Film-type units	671
14.5.6. Thin-layer evaporators	672
14.5.7. Plate-type units	674
14.5.8. Flash evaporators	676
14.5.9. Foaming in evaporators	677
14.5.10. Typical industrial installations	677
14.6. Mechanical design details	679
14.6.1. Materials of construction	679
14.6.2. Condensing and vacuum equipment	680

14.6.3. Separators and entrainment	684
14.7. Further reading	685
14.8. References	685
14.9. Nomenclature	687
15. CRYSTALLISATION	689
15.1. Introduction	689
15.2. Growth and properties of crystals	690
15.2.1. Saturation	690
15.2.2. Nucleation	691
15.2.3. Crystallisation rate	693
15.2.4. Effect of impurities on crystal formation	697
15.2.5. Effect of temperature on solubility	698
15.2.6. Fractional crystallisation	699
15.2.7. Caking of crystals	701
15.3. Crystallisers	701
15.3.1. Batch crystallisers	702
15.3.2. Continuous crystallisers	704
15.4. Further reading	708
15.5. References	708
15.6. Nomenclature	709
16. DRYING	710
16.1. Introduction	710
16.2. General principles	710
16.3. Rate of drying	713
16.3.1. Drying periods	713
16.3.2. Time for drying	716
16.4. The mechanism of moisture movement during drying	717
16.4.1. Diffusion theory of drying	717
16.4.2. Capillary theory of drying	718
16.5. Classification and selection of dryers	723
16.6. Tray and tunnel dryers	725
16.6.1. Tray or shelf dryers	725
16.6.2. Tunnel dryers	727
16.7. Rotary dryers	727
16.7.1. Directly heated rotary dryers	727
16.7.2. Indirectly heated rotary dryers	730
16.7.3. Design considerations	731
16.8. Drum dryers	733
16.9. Spray dryers	735
16.9.1. Introduction	735
16.9.2. Atomisers	736
16.9.3. Drying of drops	744
16.9.4. Industrial spray dryers	745
16.10. Pneumatic dryers	748
16.11. Fluidised bed dryers	750
16.12. Turbo-shelf dryers	750
16.13. Disc dryers	752
16.14. Less common drying methods	755
16.14.1. Solvent drying	755
16.14.2. Superheated steam drying	756
16.14.3. Freeze drying	756
16.15. The drying of gases	757
16.16. Further reading	758
16.17. References	759
16.18. Nomenclature	760

PROBLEMS	763
CONVERSION FACTORS FOR SOME COMMON SI UNITS	791
INDEX	793
