

Contents

<i>Part 1: Physical nature of chromosomes</i>	1
1 Introduction	3
2 Pre-treatment and hypotonic treatment	9
3 Fixation	30
4 Processing	71
5 Staining	91
6 Mounting	140
7 Representative schedules for direct observation of chromosomes from plants and animals	154
8 Methods for special materials	189
9 Microscopy	223
Ordinary light microscopy	223
Phase and interference microscopy	227
Polarisation microscopy	232
X-ray microscopy	234
Fluorescence microscopy	235
Light microscope autoradiography	244
Electron microscopy	263
High resolution autoradiography	295
Microspectrophotometry	307
10 Study of plant chromosomes from tissue culture	317
11 Chromosome analysis following short- and long-term cultures in animals, including man	339
12 Chromosome analysis from malignant tissues	390
13 Study of banding patterns of chromosomes	408
Banding pattern techniques	408
Sister chromatid exchange	442
14 Somatic cell fusion	450
15 Effects of physical and chemical agents on chromosomes	468
<i>Part 2: Chemical nature of chromosomes</i>	499
16 Introduction	501
17 Nucleic acid and its components	509
18 Proteins	543
19 Enzymes	565
20 Micrurgy	584

xii *Contents*

21	Isolation and extraction of nuclei, chromosomes and chromosome components	588
22	Molecular hybridisation <i>in situ</i>	634
	Appendix 1 Culture medium for <i>Drosophila</i>	650
	Appendix 2 Buffer solutions	651
	Addendum	658
	Author index	661
	Subject index	693
