**PART
I
GENERAL**

| | | |
|----------|---|----------|
| 1 | Introduction—Clarification of Concepts | 3 |
| 1.1 | Vegetation Ecology | 3 |
| 1.2 | How to Recognize Plant Communities | 4 |
| 1.3 | European and Anglo-American Terminology | 6 |
| 1.4 | The Scope of This Book | 8 |

| | |
|---|-----------|
| 2 Background and Current Trends in Vegetation Ecology | 10 |
| 2.1 The Geographic-Descriptive Orientation | 10 |
| 2.2 The Systematic-Typological Orientation | 12 |
| 2.3 The Environmental Orientation | 13 |
| 2.4 The Experimental Orientation | 13 |
| 2.5 The Dynamic Orientation | 14 |
| 2.6 The Mathematical-Statistical Orientation | 15 |
| 2.7 The Areal-Geographic and Historical Orientation | 15 |
| 2.8 The Cartographic Orientation | 16 |
| 2.9 The Applied Orientation | 17 |
| 2.10 The Ecosystem Orientation: A Synthesis of Concepts | 17 |
| 2.10.1 Structural Aspects <input type="checkbox"/> 2.10.2 Functional Aspects <input type="checkbox"/> 2.10.3 Size and Kind <input type="checkbox"/> 2.10.4 Ecosystem Classification | |
| 3 Plant Community Hypotheses | 22 |
| 3.1 Organism Analogies and Their Consequences | 22 |
| 3.11 The Holistic Viewpoint <input type="checkbox"/> 3.12 The Systematic Viewpoint <input type="checkbox"/> | |
| 3.13 The Individualistic Viewpoint <input type="checkbox"/> 3.14 Emphasis on Dynamic Relations <input type="checkbox"/> 3.15 Emphasis on Order | |
| 3.2 The Community—A Combination of Individuals | 25 |
| 3.3 Identification of Communities | 27 |
| 3.4 Vegetation Parameters for Defining Communities | 28 |
| 3.5 Concrete and Abstract Communities | 29 |
| 4 Considerations in Vegetation Sampling | 31 |
| 4.1 Essential Steps in Sampling | 31 |
| 4.2 Subjective versus Objective Selection of Sample Stands | 32 |
| 4.3 Recognition of Entities or Communities | 33 |
| 4.31 Level of Entitiation—A Question of Viewpoint and Purpose <input type="checkbox"/> | |
| 4.32 Limitations in Objectifying Entitiation | |
| 4.4 Selection of Sample Stands in Recognized Vegetation Segments | 37 |
| 4.41 Centralized Replicate Sampling <input type="checkbox"/> 4.42 Random, Systematic, and Stratified Random Sampling | |
| 4.5 Two Different Sampling Approaches | 39 |

| | |
|--|-----------|
| PART II | |
| VEGETATION ANALYSIS IN THE FIELD | |
| 5 Community Sampling: The Relevé Method | 45 |
| 5.1 Three Requirements of a Sample Stand—Particularly the Homogeneity Requirement | 46 |
| 5.2 Minimal Sample Area—The Size Requirement | 47 |
| 5.21 The Nested Plot Technique <input type="checkbox"/> 5.22 Criteria for Size of Relevé <input type="checkbox"/> 5.3 Evaluation of the Minimal Area Concept | |
| 5.3 Example of a Relevé Analysis | 54 |
| 5.31 Species Quantities and Stratification <input type="checkbox"/> 5.32 Essential Information Parts <input type="checkbox"/> 5.33 Further Detail for Complete Investigations | |
| 5.4 Estimating Species Quantities | 58 |
| 5.41 Relative Magnitude Terms <input type="checkbox"/> 5.42 Absolute Scale Values <input type="checkbox"/> | |
| 5.42.1 The BRAUN-BLANQUET Cover-Abundance Scale <input type="checkbox"/> 5.42.2 The DOMIN-KRAJINA Cover-Abundance Scale <input type="checkbox"/> 5.42.3 The DAU-BENMIRE Cover Scale <input type="checkbox"/> 5.43 Estimating Biomass by Partitioning in Grass Communities <input type="checkbox"/> 5.44 Estimating Vitality or Vigor <input type="checkbox"/> 5.45 Estimating Sociability and Dispersion | |
| 6 Measuring Species Quantities | 67 |
| 6.1 Quantitative Vegetation Parameters | 67 |
| 6.2 Density Measurements in Quadrats | 68 |
| 6.21 Size of Density Quadrats <input type="checkbox"/> 6.22 Shape of Density Quadrats | |
| 6.3 Frequency Determination | 70 |
| 6.31 Frequency in Quadrats Is a Nonabsolute Measure <input type="checkbox"/> 6.32 Frame Size for Frequency Determinations <input type="checkbox"/> 6.33 Frequency and Minimal Area | |
| 6.4 How to Determine Sample Size | 76 |
| 6.41 A Statistical Approach <input type="checkbox"/> 6.42 Plotting the Running Mean | |
| 6.5 Cover Measurements | 80 |
| 6.51 Ecological Significance of Cover <input type="checkbox"/> 6.52 The Crown-Diameter Method <input type="checkbox"/> 6.53 The Quadrat-Charting Method <input type="checkbox"/> 6.54 The Point-Intercept Method <input type="checkbox"/> 6.54.1 Application to Herbaceous Cover <input type="checkbox"/> 6.54.2 Application to Tree Cover <input type="checkbox"/> 6.55 The Line-Intercept Method | |

| | | | | | | |
|---|--|--|---|--|---|--|
| 7 The Count-Plot Method and Plotless Sampling Techniques | 93 | | | | | |
| 7.1 Difference between Count-Plot and Relevé Methods | 93 | | | | | |
| 7.2 Timber Survey Methods | 94 | | | | | |
| 7.3 Example of a Count-Plot Analysis | 96 | | | | | |
| 7.31 Interpretation of Stand Structure | □ 7.32 Density and Dominance Relations | | | | | |
| 7.4 Plotless Sampling Techniques | 99 | | | | | |
| 7.5 BITTERLICH's Variable Radius Method | 101 | | | | | |
| 7.51 The Technique | □ 7.52 The Principle | □ 7.53 Calibration of BITTERLICH Gauge | | | | |
| 7.6 The Wisconsin Distance Methods | 106 | | | | | |
| 7.61 Concept of Mean Distance as a Measure of Density | □ 7.62 | | | | | |
| Miscellaneous Distance Methods | □ 7.63 The Point-Centered Quarter Method | □ 7.64 Example of a Point-Centered Quarter Analysis | | | | |
| □ 7.65 Limitations of the Distance Methods | □ 7.66 Modifications to Overcome these Limitations | □ 7.67 The Importance Value | | | | |
| 7.7 Literature Examples of Quantitative Field Analyses in North America | 120 | | | | | |
| 7.71 Forest Communities | □ 7.71.1 Forest Vegetation in Western North America (DAUBENMIRE) | □ 7.71.2 Eastern Hemlock-Hardwood Forest (BORMANN and BUELL) | □ 7.71.3 Live Oak Forest, North Carolina (BOURDEAU and OOSTING) | □ 7.71.4 Upland Forest of Southern Wisconsin (BRAY and CURTIS) | □ 7.71.5 Cypress Hills Forest, Alberta and Saskatchewan (NEWSOME and DIX) | |
| 7.72 Herbaceous and Low-Shrub Communities | □ 7.72.1 Alpine Communities in New Hampshire (BLISS) | □ 7.72.2 Herbaceous Wetland Communities, Saskatchewan (WALKER and WEHRHAN) | □ 7.72.3 Shrub and Grass Communities in Montana (BRANSON, MILLER and MCQUEEN) | □ 7.73 Conclusions | □ 7.73.1 Forest Communities | |
| □ 7.73.2 Herbaceous and Low-Shrub Communities | □ 7.73.3 Size of Sample Stands | | | | | |

PART
III

**CLASSIFYING AND ORDINATING
VEGETATION DATA**

| | |
|--|------------|
| 8 Vegetation Structure, Classification Units, and Systems | 139 |
| 8.1 Concepts of Vegetation Structure | 139 |
| 8.2 Plant Life Forms | 142 |
| 8.3 Life Form Spectra | 145 |
| 8.4 Biomass Stratification and Profile-Diagrams | 147 |

| | | | | | |
|--|---|--|--|--|--|
| 8.5 Phenological Aspects in Plant Communities | 150 | | | | |
| 8.6 Classification: Limits and Possibilities | 153 | | | | |
| 8.61 Plant Distribution and Classification | □ 8.62 Criteria and Systems for Classifying Vegetation | | | | |
| 8.7 Structural Vegetation Units and Systems | 157 | | | | |
| 8.71 The Formation Concept | □ 8.72 The Structural Classification Schemes of DANSERAU and of KÜCHLER | □ 8.73 FOSBERG'S Structural Formation System | □ 8.74 UNESCO's Structural-Ecological Formation System | □ 8.75 The Synusia: Transition to Floristic and Functional Unit Interpretation | |
| 8.8 Combined Vegetation-Environment or Ecosystem Schemes | 166 | | | | |
| 8.81 KRAJINA's Biogeoclimatic Zonation Scheme | □ 8.82 A Classification of World Ecosystems | | | | |
| 8.9 Floristic Vegetation Units and Systems | 171 | | | | |
| 8.91 Species Dominance Community-Type Concepts: The Sociation and Consociation | □ 8.92 The Association Concept | □ 8.93 BRAUN-BLANQUET'S Floristic Association System | | | |

| | |
|---|------------|
| 9 Classifying Vegetation by Tabular Comparison | 177 |
| 9.1 Construction of a Raw Table | 179 |
| 9.2 Calculating Degree of Constancy | 181 |
| 9.3 Recognizing Differential Species | 183 |
| 9.4 Unranked Abstract Plant Communities | 193 |
| 9.5 Ranking of Abstract Plant Communities | 195 |
| 9.6 Determination of Plant Associations and Character Species | 205 |
| 9.7 Value of the Alliance Concept | 209 |

| | | | | | | |
|---|---|---|--|--|---|--|
| 10 Mathematical Treatment of Vegetation Data | 211 | | | | | |
| 10.1 Similarity Coefficients of Plant Communities | 212 | | | | | |
| 10.11 Index of Similarity According to JACCARD | □ 10.12 Index of Similarity According to SORENSEN | □ 10.13 Similarity Relations Involving Species Quantities | □ 10.14 Application of Similarity Indices for Ordering Relevés | □ 10.15 Comparison of Seven Similarity Indices | □ 10.16 Threshold Values for Classifying Associations | |
| 10.2 Correlation between Species | 231 | | | | | |
| 10.3 Species Ordination | 233 | | | | | |
| 10.31 Application of the 2 x 2 Contingency Table | □ 10.32 Two Literature Examples | | | | | |
| 10.4 Objective Classification | 243 | | | | | |

| | |
|--|------------|
| 10.5 Relevé Synthesis by Punch Cards with Sighting Holes | 247 |
| 10.6 Relevé Synthesis by Electronic Computer | 250 |
| 10.61 Sorting of Species by Constancy <input type="checkbox"/> 10.62 Sorting of Relevés in Similarity Groups <input type="checkbox"/> 10.63 Selection of Differential Species | 269 |
| 10.7 Sample Stand Ordination | 269 |
| 10.71 Uni-Dimensional Ordination <input type="checkbox"/> 10.72 Multidimensional Ordination <input type="checkbox"/> 10.72.1 x Axis Construction <input type="checkbox"/> 10.72.2 y Axis Construction <input type="checkbox"/> 10.72.3 z Axis Construction <input type="checkbox"/> 10.72.4 Modifications of Procedure <input type="checkbox"/> 10.72.5 Distribution of Species in Ordination Graph <input type="checkbox"/> 10.72.6 Statistical Test of an Ordination | 297 |
| 10.8 The Dendrogram Method | 297 |
| 10.81 Construction of a Dendrogram by Cluster Analysis <input type="checkbox"/> 10.82 Classification of Dendrogram Clusters | |
| PART IV | |
| SPATIAL AND TEMPORAL EXPLANATIONS OF VEGETATION PATTERNS | |
| 11 Vegetation-Environment Correlation Studies | 305 |
| 11.1 Ecological Species Groups | 306 |
| 11.11 The Concept <input type="checkbox"/> 11.12 Derivation of Ecological Groups <input type="checkbox"/> | |
| 11.13 Plant Communities as Combinations of Ecological Groups <input type="checkbox"/> | |
| 11.14 Ecological Group Spectra | |
| 11.2 Ecological Land Classification | 319 |
| 11.21 Environmental Factors and Land Use Purposes <input type="checkbox"/> 11.22 Derivation of Ecological Series <input type="checkbox"/> 11.23 Undergrowth Species as Ecological Indicators | |
| 11.3 Environmental Gradient Analysis | 327 |
| 11.31 The Concept <input type="checkbox"/> 11.32 The Technique <input type="checkbox"/> 11.33 Conclusions <input type="checkbox"/> 11.34 Four Hypotheses <input type="checkbox"/> 11.35 Application of Evolution | |
| 12 Causal-Analytical Inquiries into the Origin of Plant Communities | 335 |
| 12.1 Scope of the Causal-Analytical Approach | 335 |
| 12.2 Causes of Community Formation | 336 |
| 12.3 Importance of Flora in Community Formation | 338 |
| 12.31 Access to Habitat <input type="checkbox"/> 12.32 Latently Present Plant Species | |
| 12.4 Vegetation and Habitat | 341 |
| 12.41 Qualitative Analysis of the Habitat <input type="checkbox"/> 12.42 Quantitative Analysis of the Habitat Factors | |

| | |
|--|------------|
| 12.5 Herbivory | 343 |
| 12.6 Competition | 344 |
| 12.61 Physiological and Ecological Response <input type="checkbox"/> 12.62 Mechanisms in Competition <input type="checkbox"/> 12.63 Importance of Life Form in Spatial Competition | 356 |
| 12.7 Allelopathy | |
| 12.8 Importance of History and Evolution in Causal Analysis | 359 |
| 12.81 Historical Cause and Effect Relations <input type="checkbox"/> 12.82 Evolutionary Stress Factors <input type="checkbox"/> 12.83 Species Coexistence <input type="checkbox"/> 12.84 Species Diversity <input type="checkbox"/> 12.85 Relation of Structure and Function | |
| 12.9 Causal Analysis of Plant Communities | 368 |
| 13 Succession, Climax, and Stability | 370 |
| 13.1 The Concept of Succession | 370 |
| 13.2 Kinds of Successions | 371 |
| 13.3 Methods of Studying Succession | 376 |
| 13.31 Studies on the Same Area <input type="checkbox"/> 13.32 Side-by-Side Comparisons | 380 |
| 13.4 Examples of Successions | |
| 13.41 Primary Successions <input type="checkbox"/> 13.41.1 Successions on Stable Substrates <input type="checkbox"/> 13.41.2 Successions on Instable Substrates <input type="checkbox"/> 13.42 Secondary Successions <input type="checkbox"/> 13.42.1 Abandoned Field Succession <input type="checkbox"/> 13.42.2 Logging and Fire Succession <input type="checkbox"/> 13.42.3 Exotic Species Succession | |
| 13.5 The Climax Concept and Stability | 397 |
| 13.51 The Monoclimax Concept <input type="checkbox"/> 13.52 The Polyclimax Concept <input type="checkbox"/> 13.53 Difficulties with Both Climax Concepts <input type="checkbox"/> 13.54 Community Stability <input type="checkbox"/> 13.55 A Spatial Concept Involving General Stability | |
| 14 Vegetation and Site Mapping | 411 |
| 14.1 The Concept of Vegetation and Site Mapping | 411 |
| 14.2 The Mosaic of Plant Communities | 412 |
| 14.21 Natural Community Complexes <input type="checkbox"/> 14.22 Community Complexes of the Cultivated Landscape <input type="checkbox"/> 14.22.1 Replacement Communities <input type="checkbox"/> | |
| 14.22.2 Contact Communities | 415 |
| 14.3 Mapping Objectives | 418 |
| 14.4 Map Contents and Scales | 420 |
| 14.5 Actual and Potential Vegetation | 423 |
| 14.6 Map Symbols and Colors | 424 |
| 14.7 Field Mapping Aids | |
| 14.71 Topographic Maps and Aerial Photograph <input type="checkbox"/> 14.72 Map Keys | |
| 14.8 Comparison of Vegetation and Site Mapping Methods | 427 |

PART
V

CONCLUSIONS

| | | |
|-----------|--|------------|
| 15 | Synthesis of Aims and Methods in Vegetation Ecology | 441 |
| 15.1 | Scientific and Practical Importance | 441 |
| 15.2 | Future Development of Vegetation Ecology | 442 |
| 15.3 | Synthesis of Methods | 443 |

APPENDICES

| | | |
|----------------------|--|------------|
| A | A Key to RAUNKIAER Plant Life Forms with Revised Subdivisions | 449 |
| B | Tentative Pysiognomic-Ecological Classification of Plant Formations of the Earth | 466 |
| C | A Key for Mapping Structural Vegetation Types in Southeast Ceylon on Air Photograph Mosaics at the Scale of 1:31,680 | 489 |
| D | Key for Mapping Forest Habitat Types in Southeast Manitoba with the Help of 1:15,840 Standard Aerial Photographs | 494 |
| References | | 499 |
