Preface	<i>xi</i>
Translator's notes	<i>xiv</i>
Glossary	<i>xv</i>

1	Morphology of flowers	1
1.1	Definition and morphological derivation of the flower, phylogenetic aspects	1
1.2	Topological and symmetry properties of the flower	8
1.2.1	Floral diagrams	9
1.2.2	Aestivation in the presence or absence of prophylls	13
1.2.3	Vernation and aestivation	14
1.2.4	Symmetry properties	16
1.3	The receptacle	19
1.3.1	Forms of the receptacle	19
1.3.2	Histogenesis of receptacles and hypanthia	26
1.3.3	Axial spurs	30
1.4	The perianth	32
1.4.1	General	32
1.4.1.1	"Origin" of the perianth	32
1.4.1.2	Histogenesis of the perianth	36
1.4.2	Calyx and epicalyx	39
1.4.2.1	Forms of the epicalyx	39
1.4.2.2	Form and function of the sepals	43
1.4.2.3	Gamosepaly	46
1.4.2.4	Interlocking sepal margins	46
1.4.2.5	Calyptrate calyces	48
1.4.2.6	Change of function in sepals	51
1.4.2.7	Persistent calyces	52
1.4.3	The corolla	56
1.4.3.1	Anatomical structure and colouring of the petals, flower scent	58
1.4.3.2	Development and life span	62
1.4.3.3	Types of petal	63
1.4.3.4	Zygomorphic flowers with free petals	64
1.4.3.5	Sympetaly	68
1.4.3.6	False sympetaly	70
1.4.3.7	Window flowers	75
1.4.3.8	Labiata and personate flowers, coronal scales	76
1.4.3.9	Floral dimorphism	80
1.4.3.10	Nectar leaves	83

1.4.4	The undifferentiated perianth (perigon) 87
1.4.4.1	Definition 87
1.4.4.2	Forms of tepals 87
1.4.4.3	Heterotepalous perigon 87
1.4.4.4	Zygomorphic forms of the perigon 90
1.4.4.5	Syntepaly 90
1.4.5	Achlamydeous flowers, primary and secondary apetalý 91
1.5	The androecium 93
1.5.1	The organisation of the stamens 93
1.5.2	Histogenesis and anatomical structure 93
1.5.3	Reductions of thecae and sporangia 99
1.5.4	Divergence and dislocation of thecae, and transverse anthers 101
1.5.5	Fusion of thecae and of sporangia 103
1.5.6	Stamens as diplophyllous organs 105
1.5.7	The filament 113
1.5.8	Lateral fusion of the filaments, and coronas. 117
1.5.9	Fusion of the anthers 118
1.5.10	Polyandrous androecia 123
1.5.11	Obdiplostemony 128
1.5.12	Staminodes 129
1.5.13	Petaloid transformations of the stamens 130
1.5.14	Fusion of the stamens and the gynoecium 137
1.6	The gynoecium 139
1.6.1	Structure of the carpel, apocarpous and syncarpous gynoecium, placentation types 139
1.6.2	Carpels as peltate-ascidiate organs, U-shaped placentation 143
1.6.3	Unifacial structure of carpel stalks 146
1.6.4	Marginal or submarginal and laminal placentas 149
1.6.5	The structure of the syncarpous gynoecium 151
1.6.6	Central placentas 156
1.6.7	False septa 160
1.6.8	Ovaries with sub-basal or basal styles (anacrostyly, basistily) 161
1.6.9	The apical septum 164
1.6.10	Formation of cells in the ovary 167
1.6.11	Congenital and postgenital fusion of carpels 169
1.6.12	The inferior ovary 171
1.6.13	The pseudo-syncarpous ovary 175
1.6.14	The pseudo-monomerous ovary 178
1.6.15	Polymerous gynoecia 181
1.6.16	Style and stigma 182
1.7	Nectaries 192
1.7.1	Definition and histological structure 192
1.7.2	Receptacular nectaries 194
1.7.3	Phyllome nectaries 195
2	Morphology of the inflorescence 201
2.1	Definition, descriptive terminology and classification of inflorescences 201
2.1.1	Definition and delimitation 201
2.1.2	Determinate and indeterminate inflorescences, distinction according to branching types 203
2.1.3	Simple inflorescences 204
2.1.4	Compound inflorescences 207
2.1.5	Metatopic displacement 216

2.1.6	Epiphyllous inflorescences	218
2.1.7	Accessory buds	218
2.1.8	"Racemose" and "cymose" inflorescences	219
2.2	Typology of inflorescences	224
2.2.1	Structure of polytelic synflorescences	224
2.2.2	Structure of monotelic inflorescences	227
2.2.3	General zonation in the architecture of flowering plants	228
2.2.4	Woody plants	231
2.2.5	Cauliflory	232
2.2.6	Forms of polytelic synflorescences	234
2.2.7	Impoverished forms	238
2.2.8	Forms of monotelic synflorescences	241
2.2.9	Proliferation phenomena	257
2.2.10	Truncate synflorescences	264
2.2.11	Systematic significance of synflorescence structures, transition from monotelic to polytelic	268
2.2.12	The inflorescences of the Caprifoliaceae	274
2.3	Special cases of inflorescence structure	285
2.3.1	Anthoclades	285
2.3.1.1	The concept of the anthoclade, monotelic anthoclades	285
2.3.1.2	Independence of anthoclades	286
2.3.1.3	Anthoclades in polytelic systems	287
2.3.2	Syndesmies	287
2.3.3	Pseudanthia	296
2.3.3.1	Introduction	296
2.3.3.2	Structure of pseudanthia in the Umbelliferae	297
2.3.3.3	The cyathium of the Euphorbiaceae-Euphorbiaeae	303
2.3.3.4	The cephalia and syncephalia of the Compositae	307
3	The flower as a formal and functional entity – aspects of the biology of pollination and dispersal	314
3.1	General	314
3.1.1	Self-pollination and cross-pollination	315
3.2	Mechanisms of self-pollination	316
3.3	Mechanisms which facilitate cross-pollination	317
3.3.1	Self-incompatibility, herkogamy and dichogamy	317
3.3.2	Anemophily	319
3.3.3	Hydrophily	320
3.3.4	Zoophily (zooidiogamy)	322
3.3.4.1	General prerequisites	322
3.3.4.2	Pollination by insects (entomogamy)	325
3.3.4.3	Pollination by birds (ornithogamy)	337
3.3.4.4	Pollination by bats (chiropterogamy)	338
3.4	The fruit (the flower at the stage when the seeds are ripe), infructescences	339
3.4.1	The systematics of the fruit	339
3.4.1.1	Simple fruits	339
3.4.1.2	Compound fruits	341
3.4.2	Aspects of the biology of dispersal	344
	Bibliography	349
	Index of scientific names	383
	General Index	396
