Chapter I

Structure of Glycoproteins and Their Oligosaccharide Units

Rosalind Kornfeld and Stuart Kornfeld

1. Introduction	1
2. Isolation and Structural Analysis of Glycopeptides	3
2.1. Methods for Isolation of Glycopeptides	3
2.2. Methods Used in Determination of Oligosaccharide Structure	4
3. Glycopeptides Containing Oligosaccharides Linked O-Glycosidically to the Peptide	6
3.1. Oligosaccharides Linked through <i>N</i> -Acetylgalactosamine to Serine and Threonine	6
3.2. Oligosaccharides Linked to Serine and Threonine through Sugars Other Than <i>N</i> -Acetylgalactosamine	10
3.3. Oligosaccharides Linked to the Hydroxyl Group of Hydroxylysine and Hydroxyproline	11
4. Glycopeptides Containing the <i>N</i> -Acetylglucosaminyl- Asparagine Linkage	12
4.1. Structure of the Core Region	13
4.2. Structure of "Simple"-Type Oligosaccharides	13
4.3. Structure of "Complex"-Type Oligosaccharides	16
4.4. Structure of the Oligosaccharide-Lipid Intermediate ...	22
5. Role of Oligosaccharides in Glycoprotein Synthesis	25
6. References	27

Chapter 2

The Function of Saccharide-Lipids in Synthesis of Glycoproteins*Douglas K. Struck and William J. Lennarz*

1. Introduction	35
2. Dolichol	37
3. Monoglycosyl Derivatives of Dolichol Phosphate	38
3.1. Mannosylphosphoryldolichol and <i>N</i> -Acetylglucosaminylpyrophosphoryldolichol	38
3.2. Other Glycosyl Polyprenol Derivatives	40
4. Assembly of Oligosaccharide-Lipids	41
5. Transfer of Oligosaccharide Chains to Endogenous Membrane Proteins	44
6. Transfer of the Oligosaccharide Chains from Oligosaccharide-Lipids to Exogenous, Soluble Proteins	47
6.1. Existence of a Tripeptide Acceptor Sequence	47
6.2. <i>In Vitro</i> Glycosylation of Denatured Soluble Proteins ...	50
7. A Model for Glycosylation of Membrane and Secretory Glycoproteins	53
8. Regulation of Glycoprotein Synthesis	58
9. Inhibitors of Glycosylation	60
9.1. <i>In Vivo</i> Effects of Deoxy Sugars on Protein Glycosylation	61
9.2. Effect of Deoxy Sugars on the Secretion of Glycoproteins	62
9.3. Effect of Deoxy Sugars on Virus Replication	63
9.4. <i>In Vitro</i> Effect of Deoxy Sugars on Protein Glycosylation	63
9.5. Fluorodeoxy Sugars	64
9.6. Amino Sugars	65
9.7. Bacitracin	65
9.8. Tunicamycin	66
10. References	73

Chapter 3

Mammalian Glycosyltransferases: Their Role in the Synthesis and Function of Complex Carbohydrates and Glycolipids*Harry Schachter and Saul Roseman*

Part A

1. Introduction	85
1.1. Sugar Nucleotides and Transglycosylation	85
1.2. Glycosyltransferases: General Comments	88
2. Glycosyltransferases Involved in Elongation of <i>N</i> -Glycosidically Linked Oligosaccharides of the <i>N</i> -Acetylglucosamine Type	92

2.1. Processing of Protein-Bound Oligosaccharide Prior to Elongation	93
2.2. <i>N</i> -Acetylglucosaminyltransferases and Control of Elongation	95
2.3. Fucosyltransferases	99
2.4. Galactosyltransferases	100
2.5. Sialyltransferases	103
2.6. The Golgi Apparatus as the Major Subcellular Site of Elongation	108
3. Glycosyltransferases Involved in Synthesis of O-Glycosidically Linked Oligosaccharides	111
3.1. Synthesis of Serine(Threonine)- <i>N</i> -Acetyl-D-Galactosamine Linkage	113
3.2. Synthesis of Submaxillary Gland Mucins	115
3.3. Synthesis of Human Blood Group Oligosaccharides	121
Part B	
1. Introduction	127
2. New Gangliosides	128
3. Occurrence and Subcellular Distribution	132
4. Gangliosides as Membrane Components	133
5. Biosynthesis and Degradation	135
6. Effect of Cell Transformation on Ganglioside Synthesis	139
7. Gangliosides in Development and Differentiation	142
8. Gangliosides as Membrane Receptors for Toxins and Hormones	143
9. References	147

Chapter 4

Surface Carbohydrate Alterations of Mutant Mammalian Cells Selected for Resistance to Plant Lectins*Pamela Stanley*

1. Selection of Cells with Altered Surface Carbohydrate	161
2. Biochemical Basis of a Surface Carbohydrate Alteration	162
3. Genetic and Biochemical Properties of Glt ₁ ⁻ CHO Cells	166
3.1. Localization of the Mutated Gene Product	166
3.2. Altered Membrane Properties	167
4. Surface Carbohydrate Alterations of Other Lectin-Resistant (Lec ^R) Cell Lines	168
4.1. Ricin-Resistant (Ric ^R) Mouse L Cells	168
4.2. Wheat Germ Agglutinin-Resistant (Wga ^R) CHO Cells ...	170

4.3. Concanavalin A-Resistant (ConA ^R) CHO Cells	172
5. Membrane Properties of Lec ^R Cells Possessing Specific Carbohydrate Alterations	175
5.1. Lectin Binding and Cytotoxicity	175
5.2. Lectin Agglutination and Capping	176
5.3. Membrane Glycoproteins and Glycolipids	177
6. Properties of Other Lec ^R Cell Lines	178
7. Mechanisms of Lectin Cytotoxicity	180
8. Glycosylation Mutants Selected Without the Use of Lectins	181
9. Concluding Remarks	183
10. References	186

Chapter 5

Alterations in Glycoproteins of the Cell Surface

Paul H. Atkinson and John Hakimi

1. Introduction	191
2. Growth-Dependent Changes in Asparagine-Linked Oligosaccharides of Membrane Glycoproteins	196
2.1. Glycopeptides of Class B	197
2.2. Glycopeptides of Class A	198
3. Transformation-Dependent Changes in Asparagine-Linked Glycopeptides	199
3.1. Comparison Systems	199
3.2. Difference in Sialoglycopeptides (Class B Glycopeptides)	200
3.3. Carbohydrate Content	204
3.4. Alterations and Relation to <i>in Vitro</i> and <i>in Vivo</i> Tumor Cells	205
3.5. Microheterogeneity in Oligosaccharides	209
3.6. Class A Glycopeptides	210
3.7. Changes in Oligosaccharides Derived from Single Glycoproteins	211
4. Changes in Serine- (Threonine-) Linked Oligosaccharides of Membrane Glycoproteins	213
5. Alterations in Glycosaminoglycans	215
6. Use of Endoglycosidases for Detecting Alterations in Cell Surface Glycopeptides	220
6.1. Class A and B Glycopeptides	220
6.2. Endoglycosidases Useful in Structural Analysis of Class C Glycopeptides	227
7. References	228

Chapter 6

Carbohydrate Recognition Systems for Receptor-Mediated Pinocytosis

Elizabeth F. Neufeld and Gilbert Ashwell

1. Introduction	241
2. Galactose-Binding Receptor of Mammalian Hepatocytes	242
2.1. Development of the Problem	242
2.2. Binding by Plasma Membranes	243
2.3. Isolation of Binding Protein	243
2.4. Nature of the Binding Mechanism	244
2.5. Specificity of Binding	245
2.6. Circulating Asialoglycoproteins	245
2.7. Subcellular Loci of Binding Protein	246
2.8. Membrane Topology	247
2.9. Regeneration of Binding Protein	248
3. <i>N</i> -Acetylglucosamine-Binding Receptor of Avian Hepatocytes	249
3.1. Historical	249
3.2. Isolation of Binding Protein	249
3.3. Physical and Chemical Properties	250
3.4. Kinetics of Binding	250
3.5. Comparison of Avian <i>N</i> -Acetylglucosamine and Mammalian Galactose-Binding Proteins	251
4. Mannose-6-Phosphate Recognition System of Human Fibroblasts	252
4.1. Recognition of Lysosomal Enzymes—Historical	252
4.2. Recognition Signal	253
4.3. Function	255
4.4. Generality	256
4.5. Binding Protein	257
5. Mannose/ <i>N</i> -Acetylglucosamine Recognition System of Reticuloendothelial Cells	257
5.1. Clearance of Injected Lysosomal Enzymes	257
5.2. Recognition of Two Carbohydrate Termini	258
5.3. Isolation of a Binding Protein with Dual Specificity	258
5.4. Function	259
6. Fucose Recognition System of Mammalian Hepatocytes	259
7. Concluding Remarks	260
8. References	262

Chapter 7

Structure and Metabolism of Connective Tissue Proteoglycans*Lennart Rodén*

1. Introduction	267
1.1. Structure of Proteoglycans and Their Polysaccharide Components	267
1.2. Mechanisms of Biosynthesis	268
1.3. Catabolic Pathways	274
2. Hyaluronic Acid	275
2.1. Structure of Hyaluronic Acid	275
2.2. Biosynthesis of Hyaluronic Acid	278
2.3. Catabolism of Hyaluronic Acid	280
3. Chondroitin Sulfate Proteoglycans	286
3.1. Structure of Chondroitin Sulfates (Linkage Units 3-10)	286
3.2. Aggregates of Chondroitin Sulfate Proteoglycans	287
3.3. Biosynthesis of Chondroitin Sulfate	293
3.4. Catabolism of Chondroitin Sulfate Proteoglycans	303
4. Keratan Sulfate	314
4.1. Structure of Keratan Sulfate	314
4.2. Biosynthesis of Keratan Sulfate	318
4.3. Catabolism of Keratan Sulfate	318
5. Heparin and Heparan Sulfate Proteoglycans	321
5.1. Structure of Heparin	321
5.2. Biosynthesis of Heparin	325
5.3. Heparan Sulfate	341
5.4. Catabolism of Heparin and Heparan Sulfate	343
6. Dermatan Sulfate	352
6.1. Structure of Dermatan Sulfate	352
6.2. Biosynthesis of Dermatan Sulfate	354
6.3. Catabolism of Dermatan Sulfate	355
7. References	355
Index	373
