

Contents

1	Some problems in molecular evolution	page 1
	H. GUTFREUND	
	Polymorphism	5
	The evolution of oligomers (e.g., oxygen carriers)	8
	Random (genetic) drift: neutralism	9
	The evolutionary clock	11
	References	13
2	Prebiotic evolution	15
	PETER SCHUSTER	
	The historical route and the problem of its reconstruction	15
	Prebiotic chemistry	18
	The selfreplicating molecules	29
	Dynamics of selfreplication	38
	Designing catalysts – the origin of translation	60
	Compartments and individuals	71
	Four prerequisites for Darwinian evolution	75
	Responses to environmental changes	77
	Concluding remarks	78
	References	80
3	Data handling for phylogenetic trees	88
	DEREK PEACOCK	
	Homology	90
	Phylogenies from distance measures	95
	Phylogenies using parsimony	99
	Phylogenies using compatibility	102
	Some practical considerations	105
	The accuracy of reconstructed phylogenies	107
	Conclusions	111
	References	112

4	Enzymes in bacterial populations	page 116
	PATRICIA H. CLARKE	
	Introduction	116
	Main groups of bacteria	118
	The bacterial genome	121
	Gene translocation	129
	Gene expression	133
	Evolution of new metabolic activities	135
	Evolution of new metabolic pathways	141
	References	146
5	The photosynthetic apparatus	150
	K. K. RAO, D. O. HALL & R. CAMMACK	
	Origin and evolution of life on earth	150
	Prokaryotes and eukaryotes – the endosymbiotic theory	153
	Classification of photosynthetic organisms	155
	Photosynthetic bacteria	156
	Blue-green algae	163
	Photosynthesis in eukaryotes	171
	Photosynthesis by halobacteria	185
	Protein structure and evolution	186
	Concluding remarks	197
	References	197
6	Major histocompatibility antigens	203
	J. R. L. PINK	
	The major histocompatibility complex	203
	Major histocompatibility antigen structure	207
	Major histocompatibility antigen function	216
	Conclusions	224
	References	225
7	Immunoglobulins	230
	J. R. L. PINK	
	Organisation of Ig genes	231
	Somatic processes in antibody variability	242
	Evolution of immunoglobulin genes	245
	Immunoglobulin polymorphism	250
	Conclusions	254
	References	255
8	Control mechanisms in muscle contraction	261
	ALAN WEEDS & PAUL WAGNER	
	Structural features of vertebrate striated muscle	262
	General aspects of regulation	272

	Structural relationships between calcium binding proteins	page 287
	Functional relationships between myosin light chains	292
	Conclusions	298
	References	298
9	The vertebrate visual pigments	301
	FREDERICK CRESCITELLI	
	The vertebrate visual cell	301
	Rhodopsin	305
	The A ₂ rod system	320
	The transmuted pigments	323
	The cone pigments	328
	Some biological speculations	332
	Visual pigments and vision	336
	Conclusions	345
	References	347
