1 Ancient Agricultural Systems in Dry Regions

H.W. LAWTON and P.J. WILKE	1
1.1 Introduction	1
1.2 The Beginnings of Agriculture	5
1.3 Ancient Agricultural Systems in Dry Regions of the Old World	9
1.3.1 The Near East	9
1.3.1.1 The Mesopotamian Heartland	10
1.3.1.2 Other Near Eastern Agriculture	13
1.3.2 The African Continent	16
1.3.2.1 Egypt	16
1.3.2.2 Other Dry Regions of Africa	17
1.3.3 The Indian Subcontinent	19
1.3.4 The Soviet Union and China	20
1.3.4.1 The Soviet Union	21
1.3.4.2 China	24
1.4 Ancient Agricultural Systems in Dry Regions of the New World	25
1.4.1 Mesoamerica	25
1.4.1.1 The Valley of Oaxaca	25
1.4.1.2 The Tehuacán Valley	26
1.4.1.3 The Basin of Mexico	28
1.4.2 The North American Southwest	29
1.4.2.1 The Hohokam	30
1.4.2.2 Lower Colorado River Tribes	31
1.4.2.3 Owens Valley Paiute	32
1.4.2.4 Anasazi	32
1.4.2.5 Casas Grandes	35
1.4.3 South America	36
1.5 Conclusions	38
References	39

2 Development of Present Dryland Farming Systems

L. BOWDEN (With 7 Figures)	45
2.1 Introduction	45
2.2 Geographic Aspects of the World's Semi-Arid Tropics	45
2.3 Dryland Farming Systems in the Semi-Arid Tropics	48
2.3.1 Australia	49

2.3.2 India	51
2.3.3 Brazil	53
2.3.4 Southern Africa	54
2.3.5 Sahel Region	56
2.4 Geographic Aspects of the World's Semi-Arid Mid-Latitude Lands (Steppe)	57
2.5 Dryland Farming Systems in the Mid-Latitude Steppes	61
2.5.1 North America	62
2.5.2 Eurasia	64
2.6 Perception of the Semi-Arid Environment	65
2.7 The Future of Dryland Farming Systems	68
References	72
3 Semi-Arid Climates: Their Definition and Distribution	
H.P. BAILEY (With 4 Figures)	73
3.1 Introduction	73
3.2 Meteorological Factors Contributing to Aridity and Humidity	73
3.3 Defining Semi-Arid Regions	74
3.3.1 Moisture Balance Over the Year as a Whole	74
3.3.2 Seasonal Considerations in Moisture Balance	84
3.3.3 Attributes of the Bailey Moisture Index	89
3.3.4 Precipitation Variability in Semi-Arid Regions	90
3.4 Thermal Regions of Semi-Arid Zones	91
3.5 Conclusions	95
References	96
4 Agroclimatology Applied to Water Management in the Sudanian and Sahelian Zones of Africa	
C. DANCETTE and A.E. HALL (With 11 Figures)	98
4.1 Introduction	98
4.2 Climatology and the Hydrologic Budget of Cropping Systems	99
4.2.1 Evaporative Demand of the Atmosphere	99
4.2.1.1 Reference Crop Evapotranspiration	99
4.2.1.2 Pan Evaporation	101
4.2.1.3 Piche Evaporimeter	103
4.2.1.4 Calculating Evaporative Demand from Weather Data	104
4.2.1.5 Relations Between Evaporative Demand and Rainfall	104
4.2.2 Actual Crop Water Requirements	106
4.2.2.1 Methods of Measurement	106
4.2.2.2 Crop Water Requirements	108
4.2.3 Rainfall Efficiency	110
4.2.3.1 The First Useful Rainfall	112
4.2.3.2 The End of the Useful Rainy Season	112
4.2.3.3 Determining the Adequacy of Rainfall and Soil Moisture Reserves to Satisfy Crop Water Needs During the Growing Season	112

4.3 Application of Agroclimatology to Agriculture in Senegal	114
4.3.1 Cultural Practices	114
4.3.2 Varietal Development	116
4.3.3 Regional Water Management	116
4.4 Future Strategies	117
References	117
5 Microbiological and Biochemical Aspects of Semi-Arid Agricultural Soils	
D.D. FOCHT and J.P. MARTIN (With 9 Figures)	119
5.1 Introduction	119
5.2 Microbial Ecology and Soil Physical Properties	119
5.2.1 Water	120
5.2.2 Aeration	122
5.2.3 Temperature	124
5.2.4 pH	127
5.3 Organic Matter	128
5.3.1 Decomposition	129
5.3.2 Synthesis	132
5.3.3 Aggregation	133
5.4 Mineral Nutrition of Plants	136
5.4.1 Phosphorus	136
5.4.2 Mycorrhizae	137
5.4.3 Chelation of Iron and Other Metals	139
5.4.4 The Nitrogen Triangle	141
5.5 Future Directions for Research	142
References	143
6 Crop Adaptation to Semi-Arid Environments	
A.E. HALL, K.W. FOSTER, and J.G. WAINES	148
6.1 Introduction	148
6.2 Water as a Limiting Factor	149
6.3 Adaptive Attributes for Semi-Arid Environments	150
6.3.1 Phenology and Mechanisms for Escaping Drought	150
6.3.2 Drought Avoidance	152
6.3.3 Tolerance to Drought	156
6.3.4 Heat Resistance	157
6.3.5 Acclimation to Drought and Heat	158
6.3.6 Water-Use Efficiency	159
6.4 Developing Cultivars for Semi-Arid Environments	160
6.4.1 Interactions Between Genotype and Environment	161
6.4.2 Selecting for Yield in Semi-Arid Environments	164
6.4.3 Selecting for Indices of Adaptation	165
6.4.4 Genetic Resources Available	170
6.4.4.1 Barley and Wheat	170
6.4.4.2 Millet and Sorghum	171

6.4.4.3 Maize	172
6.4.4.4 Cowpeas and Beans	172
6.5 Future Strategies for Research	173
References	173

7 Water Transport Through Soil, Plant, and Atmosphere

W.A. JURY (With 8 Figures)	180
7.1 Introduction	180
7.2 Components of the Soil-Plant-Atmosphere Continuum	181
7.2.1 Surface Water Hydrology	181
7.2.2 Soil Water Movement	182
7.2.3 Evapotranspiration	184
7.2.3.1 Potential Evapotranspiration	185
7.2.3.2 Evapotranspiration with Incomplete Crop Cover	186
7.2.3.3 Stress-Limited Evapotranspiration	187
7.2.4 Plant Water Uptake and Plant Response	188
7.2.4.1 Water Movement Through the Plant	188
7.2.4.2 Behavior of Plant Roots	189
7.2.4.3 Plant Response to Water Deficits	189
7.3 Models of the Soil-Plant-Atmosphere Continuum	190
7.3.1 Introduction and Classification	190
7.3.2 Descriptions of Individual Models	191
7.3.3 Application to Dryland Farming Systems	195
7.4 Conclusions	196
References	196

8 Crop Management in Semi-Arid Environments

W.H. ISOM and G.F. WORKER	200
8.1 Introduction	200
8.2 Management Systems	200
8.2.1 Subsistence Cropping	200
8.2.2 Commercial Crop Production	201
8.3 Cultural Systems	201
8.3.1 Annual Cropping	202
8.3.2 Alternate Crop-Fallow System	202
8.3.3 Ley Farming	202
8.3.4 Shifting Cultivation	203
8.3.5 Mound Culture	204
8.3.6 Recession Farming	204
8.3.7 Mulch Farming	205
8.4 Cropping Methods	205
8.4.1 Sole Cropping	205
8.4.2 Mixed Cropping	206
8.4.3 Intercropping	206
8.4.4 Relay Cropping	208

8.5 Crop Selection	209
8.5.1 Choice of Species	209
8.5.2 Choice of Cultivar	209
8.5.3 Seed Sources	210
8.6 Planting Techniques	212
8.6.1 Time of Planting	212
8.6.2 Planting Depth	212
8.6.3 Seeding Rates	213
8.7 Crop Fertilization	215
8.8 Crop Rotation	217
8.9 Vertebrate Pest Control	218
8.10 Harvesting	219
8.11 Future Directions of Research	220
References	221

9 Soil Management in Semi-Arid Environments

D.W. HENDERSON	224
9.1 Introduction	224
9.2 Differing Responses of Soils to Tillage	225
9.3 Objectives of Soil Management	226
9.4 Tillage and Soil Water	227
9.5 Soil Fertility	231
9.6 Tillage and the Soil Microenvironment	233
9.7 Erosion Control	235
References	237

10 Erosion and Its Control in Semi-Arid Regions

G.H. CANNELL and L.V. WEEKS (With 5 Figures)	238
10.1 Introduction	238
10.2 Erosion by Water	239
10.2.1 Factors that Influence Erosion by Water	239
10.2.1.1 Rainfall	239
10.2.1.2 Temperature	239
10.2.1.3 Slope	239
10.2.1.4 Soil	240
10.2.1.5 Plant Cover	240
10.2.1.6 Universal Soil-Loss Equation	240
10.2.2 Extent of Erosion by Water for Different Farming Systems	241
10.3 Erosion by Wind	246
10.3.1 Factors that Influence Erosion by Wind	246
10.3.1.1 Wind	246
10.3.1.2 Surface	247
10.3.1.3 Soil	248
10.3.1.4 Wind Erosion Equation	248
10.3.2 Extent of Erosion by Wind	249
10.4 Erosion Control Measures	249
References	253

11 Diseases and Nematode Pests in Semi-Arid West Africa	
S.D. VAN GUNDY and M. LUC	257
11.1 Introduction	257
11.2 Principles of Disease and Nematode Management	258
11.2.1 Exclusion	258
11.2.2 Crop Rotation and Cultural Practices	259
11.2.3 Pesticides	260
11.2.4 Resistant Varieties	260
11.3 Diseases and Nematodes of Specific Food Crops	261
11.3.1 Sorghum	261
11.3.2 Millet	261
11.3.3 Cowpea	262
11.3.4 Peanut	262
11.4 Future Directions for Research in Disease and Nematode Pest Control in Semi-Arid Africa	263
11.4.1 Plant Diseases	263
11.4.2 Nematode Pests	263
References	264
12 Weed Control	
L.S. JORDAN and D.L. SHANER	266
12.1 Losses from Weeds	266
12.1.1 Crop Yield Reduction	267
12.1.2 Competition for Moisture	268
12.1.3 Competition for Nutrients	269
12.1.4 Competition for Light	269
12.1.5 Competition in Mixed Populations	270
12.2 Weed Characteristics	271
12.2.1 Weed Reproduction	271
12.2.2 Weed Life Cycle	272
12.3 Management of Weeds	272
12.3.1 Cultural Control	272
12.3.1.1 Prevention	273
12.3.1.2 Competitive Crops	273
12.3.1.3 Crop Rotation	273
12.3.2 Mechanical Weed Control	274
12.3.2.1 Manual	274
12.3.2.2 Hoeing	274
12.3.2.3 Cutting	274
12.3.2.4 Flooding	275
12.3.2.5 Heat	275
12.3.2.6 Smothering	276
12.3.2.7 Tillage	276
12.3.2.8 Biological Control	278
12.4 Herbicides	278
12.4.1 Classification and Selectivity	278

12.4.1.1 Contact	279
12.4.1.2 Translocated	279
12.4.1.3 Soil-Applied	279
12.4.1.4 Time of Application	280
12.4.1.5 Formulation	280
12.5 Interaction of Weed Control and the Environment	281
12.5.1 Weather	282
12.5.1.1 Temperature	282
12.5.1.2 Wind	282
12.5.1.3 Water	282
12.5.1.4 Environmental Interactions with Herbicides	283
12.5.2 Soil and Herbicides	284
12.5.3 General Considerations	287
12.6 Control of Specific Weeds	288
12.6.1 Broadleaved Weeds	288
12.6.2 Weedy Grasses	288
12.6.3 Nutsedge	289
12.6.4 Striga	290
12.7 General Conclusions	291
References	292

13 The Interaction Between Cultivation and Livestock Production in Semi-Arid Africa	
R.L. MCCOWN, G. HAALAND, and C. DE HAAN (With 3 Figures)	297
13.1 Introduction	297
13.1.1 Basic Differences Between the Two Production Systems	297
13.2 Linkages Between Crop and Livestock Production	299
13.2.1 Interactions When Agricultural and Pastoral Production Take Place in Different Management Units	299
13.2.1.1 No Supporting Linkage	299
13.2.1.2 Ecological Linkage	299
13.2.1.3 Exchange Linkage	300
13.2.1.4 Competition Linkage	301
13.2.2 Interactions When Agricultural and Pastoral Production Take Place Within the Same Management Unit	302
13.2.2.1 Investment Linkage	302
13.2.2.2 Food Linkage	303
13.2.2.3 Manure Linkage	304
13.2.2.4 Draft Linkage	304
13.2.2.5 Fodder Linkage	306
13.3 Selected Cases of Cropping-Livestock Systems	307
13.3.1 Western Senegal	307
13.3.2 Bambara Lands	309
13.3.3 The Gourma Region	311
13.3.4 Mossi Lands	312
13.3.5 Hausaland	314

13.3.6	Bokoro Area	316
13.3.7	Western Darfur	317
13.3.8	Harar Province, Ethiopia	318
13.4	Trends in Organization of Linkages	320
13.4.1	The Process of Adaptation	321
13.4.1.1	Economic Viability	321
13.4.1.2	Political Viability	322
13.4.1.3	Ecological Viability	322
13.4.2	Conditions and Adaptations in the Semi-Arid Zone	325
13.4.3	New Trends and Their Implications	326
13.4.3.1	National Pacification	327
13.4.3.2	Urbanization	327
13.4.3.3	External Demand for Crops and Livestock, and External Supply of Consumer Goods	327
13.4.3.4	Population Growth	329
13.4.3.5	Overall Implications	329
13.5	Conclusions	330
