

## Table of Contents

	Preface	ix
<b>1</b>	<b>Basic Principles of Thermodynamics of Polymer Solutions</b>	<b>1</b>
1.1	The Main Thermodynamic Characteristics of Solution	1
1.2	Regular Solutions. Hildebrand-Scatchard Equation	2
1.3	Phase Equilibrium in Solutions. Binodals and Spinodals	4
1.4	The Flory-Huggins Theory	9
1.4.1	Entropy of Mixing	10
1.4.2	The Heat and Free Energy of Mixing	11
1.5	Dilute Solutions of Polymers	13
1.6	Phase Separation In Polymer Solutions	16
	References	30
<b>2</b>	<b>Statistical Theories of Polymer Solutions</b>	<b>33</b>
2.1	The Theory by Prigogine-Patterson	34
2.2	The Role of Various Contributions of the Mixing Parameters	42
2.3	Effect of Solvent Chain Length on the Interaction Parameters	44
2.4	New Flory Theory	48
2.5	Modification of the New Flory Theory	55
2.6	New Huggins Theory	59
2.7	Sanchez-Lacombe Theory	65
2.7.1	Equation of State	65
2.7.2	Mixtures of Liquids	67
2.7.3	Free Energy and Chemical Potential	69
2.7.4	Functions of Mixing	70
2.7.5	Phase Stability and Spinodal	71
2.8	Some Experimental Results of Thermodynamic Properties of Polymer Solutions	73
	References	77
<b>3</b>	<b>Thermodynamics of Polymer Mixing</b>	<b>81</b>
3.1	Binary Mixtures	81
3.1.1	Application of the Theory of Regular Solutions to Thermodynamics of Polymer Mixing	83
3.1.2	Application of New Statistical Theories for Describing Thermodynamic Properties of Polymer Mixtures	88
3.1.3	The Application of the New Huggins Theory	98
3.1.4	The Sanchez-Lacombe Theory	101
3.1.4.1	Chemical Potentials	102
3.1.4.2	The Stability of Phase and Spinodal	104
3.1.4.3	Criterion of Miscibility of Polymer-polymer Mixture	107
3.2	Experimental Data on Thermodynamic Properties of Binary Polymer Mixtures	110
3.2.1	Phase Behavior of Binary Polymer Mixtures	117

3.2.2	Concentration and Temperature Dependencies of Parameters of Thermodynamic Interactions in the Mixtures of Oligomers and Polymer Homologues	128	5.4	Some Experimental Results
3.2.3	Influence of Various Factors on the Miscibility	143	5.5	Separation in Solutions and Factors Influencing the Kinetic
3.2.3.1	Deuteration and Tacticity of Polymers	143	5.5.1	Tacticity
3.2.3.2	Branching of Chains	143	5.5.2	Effects of Addition of Diblock
3.2.3.3	Effect of Pressure	144	5.5.3	Spinodal Decomposition Near
3.2.3.4	Asymmetry of the Length of Statistical Segment	144	5.5.4	Shear-induced Phase Separation
3.2.4	Possible Errors in Estimating the Miscibility of Mixtures Obtained from Solutions in a Common Solvent	148	5.6	Phase Separation Accompanying Blend Formation
3.3	Miscibility of Polymers at the Interface with Solid	151	5.6.1	Spinodal Decomposition in IPN
3.3.1	Phase Diagrams of Filled Polymer Mixtures	151	5.6.2	Nucleation and Growth During
3.3.2	Phase Separation in Thin Films of Polymer Mixtures at the Interface with Solid	155	5.6.3	Some Features of Microphase
3.3.3	Thermodynamic Interaction Parameters in Filled Polymer Mixtures	161	6	References
3.3.4	On the Equilibrium and Non-equilibrium Compatibilization of Polymer Mixtures	167	6.1	<b>Interface in Demixing Solutions</b>
3.4	Ternary Polymer Systems	169	6.2	Vrij-Roebersen Theory
3.4.1	Ternary Systems Polymer-polymer-solvent	169	6.3	Kammer's Theory
3.4.2	Ternary Polymer-polymer-polymer Systems	185	6.4	The Theory by Helfand
3.5	Thermodynamics of Formation of Stable Dispersion in Binary Polymer Mixtures	205	6.5	The Theory by Nose
	References	210	6.6	Sanchez-Lacombe Theory
4	<b>Homopolymer-copolymer and Copolymer-copolymer Blends</b>	227	6.7	Other Theories of Polymer-polymer Blends
4.1	Mean-field Binary Interaction Models	227	6.8	Scaling Principle in Describing
4.1.1	Miscibility Windows	230	6.8.1	Some Experimental Data on the
4.2	Effect of the Sequence Distribution in Copolymer on the Phase Behavior of Homopolymer-copolymer Mixtures	235	6.8.2	of Polymer Blends
4.3	The Dependence of the Phase Behavior of Copolymer Mixtures of Various Compositions on the Sequence Distribution	239	6.9	Interfacial Tension
4.4	The Effect of the Sequence Distribution in Copolymer and Its Compatibilizing Effect in Mixture of Two Immiscible Polymers	243	6.9.1	The Interfacial Width and Interfacial Segregation in Polymer
4.4.1	Mixtures of Homopolymers with Homologue Series of Polymers of Another Chemical Nature	251	6.10	Surface Segregation Near the Interface
4.5	Ternary Mixtures	259		Segregation of Block-copolymers Between Homopolymers
4.6	Modified Theories of the Equation-of-state	264		References
	References	271		
5	<b>Mechanism and Kinetics of Phase Separation in Polymer Solutions and Blends</b>	275	<b>Nomenclature</b>	
5.1	Nucleation and Growth	275		
5.2	Spinodal Mechanism of Phase Separation	277	<b>Index</b>	
5.3	Application of the Theory of Spinodal Decomposition to Polymeric Systems	283		

ture Dependencies of mic Interactions in the Polymer Homologues s on the Miscibility Polymers	128	5.4	Some Experimental Results on Kinetics of Phase Separation in Solutions and Mixtures of Polymers	299
	143	5.5	Factors Influencing the Kinetics of Phase Separation	320
	143	5.5.1	Tacticity	321
	144	5.5.2	Effects of Addition of Diblock-copolymers	323
	144	5.5.3	Spinodal Decomposition Near Solid Surface	328
	144	5.5.4	Shear-induced Phase Separation	329
of Statistical Segment ng the Miscibility of Mixtures	148	5.6	Phase Separation Accompanying Reactions of Polymer Blend Formation	334
a Common Solvent	148	5.6.1	Spinodal Decomposition in IPNs	334
the Interface with Solid	151	5.6.2	Nucleation and Growth During IPN Formation	340
olymer Mixtures	151	5.6.3	Some Features of Microphase Structure of IPNs	351
ilms of Polymer Mixtures	151		References	356
Parameters in Filled Polymer	155	6	<b>Interface in Demixing Solutions and Polymer Mixtures</b>	363
n-equilibrium Compatibilization	161	6.1	Vrij-Roebersen Theory	364
	167	6.2	Kammer's Theory	371
polymer-solvent	169	6.3	The Theory by Helfand	374
polymer Systems	185	6.4	The Theory by Nose	380
ation of Stable Dispersion in	205	6.5	Sanchez-Lacombe Theory	381
	210	6.6	Other Theories of Polymer-polymer Interface	391
and Copolymer-copolymer	227	6.7	Scaling Principle in Describing the Interface	397
on Models	227	6.8	Some Experimental Data on the Interfacial Properties of Polymer Blends	400
tribution in Copolymer on homopolymer-copolymer Mixtures	230	6.8.1	Interfacial Tension	400
ase Behavior of Copolymer ositions on the Sequence	235	6.8.2	The Interfacial Width and Interfacial Profiles	401
le Distribution in Copolymer ect in Mixture of Two Immiscible	239	6.9	Surface Segregation in Polymer Mixtures	406
with Homologue Series of ical Nature	243	6.9.1	Surface Segregation Near the Interface with Solid	408
equation-of-state	251	6.10	Segregation of Block-copolymers at the Interface Between Homopolymers	412
	259		References	428
	264		<b>Nomenclature</b>	435
	271		<b>Index</b>	443
of Phase Separation in lends	275			
ase Separation f Spinodal Decomposition to	275			
	277			
	283
