Contributors	vii
Preface	ix
Foreword	xi
<i>G.C. Hawtin</i>	
1. Overview	1
<i>J.A. Callow, B.V. Ford-Lloyd and H.J. Newbury</i>	
2. Use of molecular marker techniques for description of plant genetic variation	9
<i>A.L. Westman and S. Kresovich</i>	
3. Genetic diversity – population structure and conservation	49
<i>M.D. Hayward and N.R. Sackville Hamilton</i>	
4. Genomic relationships, conserved synteny and wide-hybrids	77
<i>D.A. Laurie, G.J. Bryan and J.W. Snape</i>	
5. Molecular markers and the management of genetic resources in seed genebanks: a case study of rice.	103
<i>B.V. Ford-Lloyd, M.T. Jackson and H.J. Newbury</i>	
6. <i>In vitro</i> conservation methods	119
<i>F. Engelmann</i>	
7. Conservation of DNA: DNA banking	163
<i>R.P. Adams</i>	

8.	Genetic resources and plant breeding (identification, mapping and manipulation of simple and complex traits) <i>M.J. Kearsey</i>	175
9.	Gene identification, isolation and transfer <i>I.D. Godwin</i>	203
10.	Importance of biotechnology for germplasm health and quarantine <i>H. Barker and L. Torrance</i>	235
11.	Biodiversity for bioindustries <i>G. Tamayo, W.F. Nader and A. Sittenfeld</i>	255
12.	Internet resources for the biologist <i>M.L. Anderson and S.W. Cartinhour</i>	281
	Index	301
