|-----------------------------------------------------------------|-----------|
| <b>PART ONE: Preliminaries</b>                                  | <b>1</b>  |
| <b>1 Biological Information Processing and Computer Science</b> | <b>3</b>  |
| 1.1 Biological Information Processing                           | 4         |
| 1.2 What Biology Offers the Computer Scientist                  | 5         |
| 1.3 What Simulation Offers the Biologist                        | 7         |
| 1.4 Preview                                                     | 9         |
| <b>2 Modelling and Simulation</b>                               | <b>10</b> |
| 2.1 Modelling                                                   | 11        |
| 2.1.1 Systems and Models                                        | 11        |
| 2.1.2 Varieties of Models                                       | 15        |
| 2.1.3 Aids to Modelling                                         | 18        |
| 2.2 Simulation                                                  | 21        |
| 2.2.1 Paradigms and Strategies                                  | 21        |
| 2.2.2 Costs and Hazards                                         | 24        |
| 2.2.3 Interactive Simulation                                    | 25        |
| 2.3 Zeigler's Framework                                         | 26        |
| 2.3.1 The Five Elements                                         | 27        |
| 2.3.2 The Postulates                                            | 29        |
| 2.3.3 Problems in Modelling and Simulation                      | 30        |

|          |                                                  |           |
|----------|--------------------------------------------------|-----------|
| <b>3</b> | <b>Introduction to Cellular Biology</b>          | <b>31</b> |
| 3.1      | Cellular Architecture                            | 31        |
| 3.1.1    | Components of Prokaryotic and Eukaryotic Cells   | 31        |
| 3.1.2    | Membranes and Transport                          | 33        |
| 3.1.3    | Cytoplasmic Constituents                         | 36        |
| 3.1.4    | The Nucleus                                      | 37        |
| 3.2      | Bioenergetics                                    | 38        |
| 3.2.1    | Energy and Chemical Bonding                      | 38        |
| 3.2.2    | Respiration                                      | 39        |
| 3.2.3    | Photosynthesis                                   | 40        |
| 3.3      | Cellular Division                                | 41        |
| 3.3.1    | The Cell Cycle                                   | 41        |
| 3.3.2    | Mitosis                                          | 42        |
| 3.3.3    | Meiosis                                          | 43        |
| 3.4      | Informational Macromolecules                     | 44        |
| 3.4.1    | Nucleic Acids                                    | 45        |
| 3.4.2    | Proteins                                         | 47        |
|          | <b>PART TWO: Information Processing In Cells</b> | <b>49</b> |
| <b>4</b> | <b>Genetic Algorithms</b>                        | <b>51</b> |
| 4.1      | Replication of DNA                               | 52        |
| 4.1.1    | DNA Polymerases                                  | 52        |
| 4.1.2    | Initiation of Replication                        | 53        |
| 4.1.3    | Mechanics of Replication                         | 54        |
| 4.1.4    | Repair Synthesis                                 | 56        |
| 4.2      | Transcription                                    | 57        |
| 4.2.1    | RNA Polymerase                                   | 57        |
| 4.2.2    | Mechanics of Transcription                       | 58        |
| 4.2.3    | Products of Transcription                        | 60        |
| 4.3      | Translation                                      | 61        |
| 4.3.1    | Transfer RNA                                     | 61        |
| 4.3.2    | Ribosomes                                        | 62        |
| 4.3.3    | Mechanics of Translation                         | 64        |

|          |                                                        |           |
|----------|--------------------------------------------------------|-----------|
| 4.4      | The Genetic Code                                       | 66        |
| 4.4.1    | Triplet Reading Frame                                  | 66        |
| 4.4.2    | Codon Assignment                                       | 67        |
| 4.4.3    | Code Patterns and Wobble                               | 69        |
| 4.5      | Regulation of Transcription and Translation            | 71        |
| 4.5.1    | The Operon Model                                       | 71        |
| 4.5.2    | Varieties of Transcriptional Control                   | 73        |
| 4.5.3    | Suppression                                            | 75        |
| <b>5</b> | <b>Simulation of Cellular Activities</b>               | <b>78</b> |
| 5.1      | Simulation of Biochemical Reactions                    | 78        |
| 5.1.1    | The Garfinkel System                                   | 80        |
| 5.1.2    | The Huneycutt System                                   | 83        |
| 5.1.3    | The Cassano System                                     | 87        |
| 5.2      | Simulation of the Cell Cycle                           | 88        |
| 5.2.1    | A Model of the Lymphoid Cell Cycle                     | 88        |
| 5.2.2    | A Model of the Fibroblast Cell Cycle                   | 90        |
| <b>6</b> | <b>Storage and Transmission of Genetic Information</b> | <b>92</b> |
| 6.1      | Genetic Maps                                           | 92        |
| 6.1.1    | Mapping by Recombination Analysis                      | 93        |
| 6.1.2    | Mapping by Complementation and Deletion                | 96        |
| 6.2      | Viruses                                                | 97        |
| 6.2.1    | Viral Chromosomes                                      | 98        |
| 6.2.2    | Regulation of Viral Gene Expression                    | 101       |
| 6.3      | Bacteria                                               | 107       |
| 6.3.1    | The Bacterial Genome                                   | 107       |
| 6.3.2    | Recombination Mechanisms in Bacteria                   | 109       |
| 6.4      | Eucaryotes                                             | 111       |
| 6.4.1    | The Eucaryotic Chromosome                              | 112       |
| 6.4.2    | Segregation, Independent Assortment, and Linkage       | 113       |
| 6.4.3    | Dominance and Gene Expression                          | 115       |
