Foreword	ix
Preface	xi
<b>1 Introduction to ultraviolet radiation</b>	<b>1</b>
1.1 General characteristics	1
1.2 Electronic excitation	2
1.3 Biological effectiveness	4
1.4 Sources of ultraviolet radiation	5
<b>2 The study of biological UV effects</b>	<b>8</b>
2.1 Biological objects	8
2.2 UV radiation as experimental tool and environmental factor	10
2.3 Quantitative determination of UV radiation energy	11
<b>3 Interaction of UV radiation with molecules of biological importance</b>	<b>23</b>
3.1 UV absorption by nucleic acids, proteins, and other biologically relevant molecules	23
3.2 Determination of the critical absorbing component: The action spectrum	28
3.3 Major photoproducts of biological significance	31
<b>4 Inactivation of cells and viruses</b>	<b>40</b>
4.1 General	40
4.2 One-hit, one-target survival curves	41
4.3 Shouldered survival curves	45
4.4 Upward concave survival curves	51
4.5 Modification of survival kinetics	55
4.6 Intrinsic sensitivities	56
<b>5 Inactivation of genetic material in vitro</b>	<b>58</b>
5.1 Inactivation of bacterial transforming DNA	58
5.2 Inactivation of viral nucleic acids	62

<b>6 Causes of lethality</b>	<b>66</b>
6.1 General	66
6.2 Evidence for lethal photoproducts	67
6.3 Biological reasons for lethality	71
6.4 Expression of lethality	73
<b>7 Recovery and repair</b>	<b>76</b>
7.1 General considerations	76
7.2 Photoreactivation and photoenzymatic repair	79
7.3 Host-cell reactivation of viruses	92
7.4 Excision-resynthesis repair	97
7.5 Phage-controlled repair: <i>v</i> -Gene reactivation	102
7.6 Recombination (or postreplication) repair	104
7.7 Multiplicity reactivation of viruses	108
7.8 Marker rescue in phages	114
7.9 Weigle recovery (or UV reactivation) of viruses	118
7.10 Other phage recovery effects	121
<b>8 Repair-related phenomena</b>	<b>124</b>
8.1 Liquid-holding effects	124
8.2 Fluence fractionation and fluence protraction	127
8.3 Other factors influencing UV inactivation and cellular repair	130
8.4 Photoprotection and indirect photoreactivation	132
8.5 The Luria-Latarjet effect	134
<b>9 UV mutagenesis</b>	<b>140</b>
9.1 General	140
9.2 Detection of UV-induced mutations and determination of their frequencies	142
9.3 Evidence for a premutational state	143
9.4 Mechanism of UV mutagenesis	150
9.5 Kinetics of UV mutagenesis	152
9.6 Delayed appearance of UV-induced mutations	155
9.7 Indirect UV mutagenesis	156
9.8 UV induction of chromosomal aberrations	157
<b>10 UV effects on macromolecular syntheses, genetic recombination, lysogeny, and related phenomena</b>	<b>160</b>
10.1 DNA synthesis	160
10.2 RNA and protein synthesis	161
10.3 Delay of growth and cell division	163
10.4 Lysogenic induction and related phenomena	170
10.5 UV effects on genetic recombination	174
10.6 Inactivation of the cells' capacity to propagate phages	178

<b>11 Biological effects of solar UV radiation</b>	<b>180</b>
11.1 Sunlight as a natural UV source	180
11.2 Solar UV effects on microbes, viruses, and DNA	182
11.3 The importance of repair under natural conditions	186
11.4 Effects of sunlight on the human skin	189
<b>12 UV carcinogenesis</b>	<b>191</b>
12.1 General	191
12.2 Evidence relating human skin cancer to UV exposure	192
12.3 Evidence for pyrimidine dimers in DNA as a cause of neoplastic transformation	193
12.4 Dark repair of carcinogenic UV lesions	197
<b>13 Sensitized UV effects on DNA</b>	<b>199</b>
13.1 Substitution for thymine by 5-bromouracil	199
13.2 UV sensitization of DNA by exogenous molecules	200
Notes	203
References	205
Index	209
